¹⁾ In relation to total risk

²¹ The operating cost-income-ratio is the ratio between operating income and operating expenses. Operating income includes net interest income, net fee and commission income, net trading income and if positive other operating result and result from discontinued operation. Operating expenses include general administrative expenses and if negative other operating result and result from discontinued operation. Other operating result and result from discontinued operation is displayed net of other taxes, deconsolidation result and valuation result according to IFRS 5. The ROE before taxes indicates the result before taxes in relation to average equity including non-controlling interest. The ROE after taxes indicates the result after taxes in relation to average equity including non-controlling interest. The ROE consolidated net income indicates the consolidated net income in relation to average equity including non-controlling interest. The NPL ratio indicates the portfolio of non-performing loans in relation to the total exposure of all loans to and receivables from customers. The net interest margin shows the net interest income in relation to total assets. The leverage ratio indicates the business volume (CCF-weighted off-balance positions plus derivatives add-on, replacement value of derivatives, disallowance of derivative claims and financial volume) in relation to the tier 1 capital (CET1 + AT1). The net stable funding ratio indicates the available stable funding in relation to the necessary stable funding. The loan deposit ratio indicates the total amount of loan accounts, overdraft facilities less syndicated loans in relation to the total amount of savings deposits, fixed term deposits and debts evidenced by certificates. The coverage ratio I indicates the coverage ratio of non-performing loans by risk provisions. The coverage ratio III indicates the coverage ratio of non-performing loans by risk provisions and collaterals.

FOREWORD BY THE CHIEF EXECUTIVE OFFICER

Gerald Fleischmann

CEO and Chairman of the Managing Board

2018 was an extraordinary and defining year for VOLKSBANK WIEN AG. VOLKSBANK WIEN AG has made a lot of progress: as the largest regional bank among Austrian Volksbanks on the one hand, and in its function as the central organisation for the entire Association of Volksbanks in Austria on the other hand.

Following the regional mergers concluded within the scope of the reorganisation of the Association, the catchment area of VOLKSBANK WIEN AG comprises all of Vienna, the whole of Burgenland, and the eastern half of Lower Austria. In 2018, Waldviertler Volksbank in Horn was merged with VOLKSBANK WIEN AG. Within VOLKSBANK WIEN AG, SPARDA-Bank, under the SPARDA brand, takes the position of a bank for employees, primarily addressing this target group segment via the works councils and the vida trade union.

Apart from the mergers and optimisation of the Association's new structures, VOLKSBANK WIEN AG, just like the financial sector as a whole, was facing big challenges due to the low interest rate environment and substantial regulatory expenses. The simplification of the business model is aimed at achieving further savings in the medium term. The bank focuses on the core areas of deposits, loans and payment transactions. In the service business with consumer credits, insurances, securities, leasing, building society savings and other areas, VOLKSBANK WIEN AG sells products sourced from top-quality partners with the highest expertise in these areas, such as TeamBank, the ERGO insurance company, and Union Investment.

Service business with the product partners developed very positively. VOLKSBANK WIEN AG achieved record sales and two-digit growth in the previous year again within the scope of our cooperation – of several years already – with TeamBank in the area of consumer financing. In the sphere of investment funds, too, the third year of cooperation with Union Investment was very encouraging; the excellent products of this international investment company were highly appreciated by the Austrian market. In spite of the challenging environment on the capital markets in the second half of the year, net sales of more than euro 118 million were achieved in 2018.

Owing to the excellent capital base and liquidity situation, VOLKSBANK WIEN AG and the Association of Volksbanks managed to considerably expand lending business. In corporate banking, the Association achieved considerable increases through the 'Unternehmer-Milliarde' (entrepreneurs' billion) financing campaign within only a few months. In 2018, VOLKSBANK WIEN AG managed to increase total borrowings by 12.4%.

The branches still constitute the primary sales channel of VOLKSBANK WIEN AG. The combination of individual branches ensures that a high level of competence is available at all locations, both in retail and in corporate banking. All measures taken within the branch and sales organisation are aimed at putting an even greater focus on the customer and the quality of the consultancy we provide. Obviously, this also includes continuous investments in the professional training and further

development of our employees. Within our consultancy-based and relationship-oriented approach, they are – and always will be – our most important asset. Therefore, it is one of the clear goals of the Association of Volksbanks to further increase consultancy standards. The distinction of the Volksbanks as top consulting bank on the occasion of the Recommender Award shows that we are doing the right thing.

The digital world constitutes another important sales channel for all banks. Already in 2016, VOLKSBANK WIEN AG had responded to this development by introducing a new digital web presence. In the past year, the digital offer was extended by several new functions.

One essential success factor in sales is going to be the ability to offer competent, trustworthy consultancy in complex financial matters. On the other hand, we need to ensure that our customers can carry out all recurring transactions and meet their information needs from any place around the clock. We are consistently developing our sales organisation with that in mind. Volksbank wants to be perceived as a relationship bank in Austria and as first contact when it comes to financial matters.

In 2018, we also undertook great efforts to maintain our stable equity base. A re-interpretation in the sphere of speculative real estate financing resulted in a considerable increase of coverage requirements in this market segment. In spite of this, the capital base was maintained at a solid level year-on-year. This enables us to properly fulfil our main function in economic terms, namely the financing of private individuals and businesses. The focus at Volksbank is on small- and medium-sized enterprises, in particular, which constitute an essential pillar of the Austrian economy. Retail customers appreciate the personal quality of our consultancy at eye level and the services tailored to their individual needs.

VOLKSBANK WIEN AG and the Association were attested further progress by the rating agencies. After several upgrades in 2017, the rating agency Fitch upgraded the credit rating again in the previous year.

Together with the Volksbanks, we started several projects in the previous year in order to bundle regulatory duties, control as well as internal handling services throughout Austria. This is meant to provide the Volksbanks, as retail banks, with more freedom to focus on retail business even more. Our fundamental values in this context are trust, regional dimensions and a customer focus. Within the new Association, VOLKSBANK WIEN AG assumes three functions: as retail bank in our catchment area, as service provider and as the central control unit for the entire Association.

The year 2018 was characterised by drastic changes that have created many opportunities for the years to come. I would like to thank all employees, officers and owners for their enormous commitment. And I want to thank our customers especially, for their great loyalty to VOLKSBANK WIEN AG in the past year.

Vienna, April 2019

Gerald Fleischmann

CEO and Chairman of the Managing Board

REPORT OF THE SUPERVISORY BOARD

pursuant to section 96 of the Austrian Stock Corporation Act (Aktiengesetz) for the 2018 business year

Heribert Donnerbauer

Chairman of the Supervisory Board

In four ordinary, one constitutive and four extraordinary meetings, in further discussions and numerous committee meetings in the 2018 business year, the Supervisory Board obtained information on the legality, expediency and efficiency of the management as well as on the situation, development and business strategy of the Company. The Supervisory Board also dealt with the topics that VOLKSBANK WIEN AG as the central organisation of the Association of Volksbanks is responsible for pursuant to Section 30a Austrian Banking Act.

The corresponding reports of the Managing Board were thoroughly discussed and acknowledged, and the required resolutions were passed.

The committee chairpersons have reported to the Supervisory Board on the work of the committees of the Supervisory Board on a regular basis. Moreover, the records of all committees, except for the HR Committee, were made available to all Supervisory Board members. Hence, the Supervisory Board was given ample opportunity to comply with its duty to obtain information and with its supervisory duty.

The Supervisory Board has currently set up the following committees: Working and Risk Committee, Audit Committee, Remuneration Committee, Nomination Committee, and HR Committee.

The Working and Risk Committee held five meetings in 2018, where the investments falling within its sphere of competence, as well as the risk topics, the risk strategy, and the current risk situation of the Company and of the Association of Volksbanks were dealt with. Credit decisions were also taken by circular resolution by the Working and Risk Committee.

The Audit Committee held five meetings in 2018. Apart from the audit of the annual financial statements, the consolidated financial statements and the financial statements of the Association, especially the internal control system, the internal audit system, and the risk management system were discussed in these meetings.

In 2018, in one meeting, the Remuneration Committee dealt with the principles of remuneration policy and with the remuneration report of VOLKSBANK WIEN AG and of the Association of Volksbanks.

The Nomination Committee held three meetings in 2018. In those meetings, the nominations for filling Supervisory Board vacancies, to be submitted to the ordinary general meeting, were dealt with, and compliance with the Fit & Proper requirements by the persons proposed for election into the Supervisory Board, as well as by the Supervisory Board as a whole were confirmed. Moreover, the Nomination Committee dealt with the annual evaluation of the Managing Board and Supervisory Board

members, with evaluating key personnel and with updating the Company's Fit & Proper Policy, as well as with reducing the Managing Board to three members as of 2019.

In 2018, in one meeting, the HR Committee dealt with the amicable resignation of Josef Preissl, Deputy Chairman of the Managing Board, from his Managing Board position with effect from 31 December 2018.

The Transformation and Mergers Committee held one meeting in 2018, where the contribution of the banking operation of Waldviertler Volksbank Horn registrierte Genossenschaft to VOLKSBANK WIEN AG was dealt with. As, accordingly, the last of the mergers planned within the Association of Volksbanks has been completed and the duties of the Transformation and Mergers Committee have been discharged, the latter was subsequently dissolved by resolution of the Supervisory Board.

Attendance at the meetings of the Supervisory Board and its committees was high.

The contribution of the banking operation of Waldviertler Volksbank Horn registrierte Genossenschaft to VOLKSBANK WIEN AG was reviewed by the Supervisory Board after the above-mentioned deliberations in the Transformation and Mergers Committee, it was approved in the ordinary general meeting held on 24 April 2018 and was carried out by way of the agreement on a contribution in kind dated 24 April 2018 with retroactive effect as at 31 December 2017, pursuant to Section 92 Austrian Banking Act, based on the principles of the Reorganisation Tax Act.

By merging Waldviertler Volksbank Horn registrierte Genossenschaft with VOLKSBANK WIEN AG, the reorganisation of the Association of Volksbanks, in terms of company law, into eight regional Volksbanks and one special purpose bank has been completed. Now the focus is on increasing efficiency and productivity by optimising and bundling processes and services within the Association of Volksbanks, associated with a further reduction of personnel and retail branches.

Again in 2018, the HR Committee of the Supervisory Board dealt with personnel changes in the Managing Board of VOLKSBANK WIEN AG. Deputy Chairman of the Managing Board Josef Preissl resigned from office with effect from 31 December 2018, and after relevant deliberations and a recommendation by the HR Committee, the Supervisory Board has consented to the agreement regarding an amicable solution with Josef Preissl.

Hence, the Managing Board of VOLKSBANK WIEN AG consists of three members as of 1 January 2019: Gerald Fleischmann, Chairman of the Managing Board and responsible for commercial, real estate and retail business, Rainer Borns, Deputy Chairman of the Managing Board and CFO, and Thomas Uher, Deputy Chairman of the Managing Board and CRO.

As the term of office of the Supervisory Board members of VOLKSBANK WIEN AG, who must be elected by the general meeting, expired after the end of the 2018 ordinary general meeting, the ordinary general meeting on 24 April 2018 was called upon to newly appoint five members of the Supervisory Board. After being nominated by the Supervisory Board, the following persons were newly elected to the Supervisory Board of VOLKSBANK WIEN AG by the ordinary general meeting for a term of office until the end of the ordinary general meeting in 2023: Anton Fuchs, Franz Gartner, Helmut Hegen, Christian Lind and Robert Oelinger.

In the subsequent constitutive meeting of the Supervisory Board, the Executive Committee of the Supervisory Board was elected as follows: Heribert Donnerbauer as Chairman, Franz Gartner as 1st Deputy Chairman and Robert Oelinger as 2nd Deputy Chairman.

The annual financial statements as at 31 December 2018, including the management report, were audited by KPMG Austria GmbH Wirtschaftsprüfungs- und Steuerberatungsgesellschaft (KPMG) and were given an unqualified audit certificate. The consolidated financial statements as at 31 December 2018 including the group management report were audited by KPMG and also provided with an unqualified audit certificate. The financial statements of the Association as at 31 December 2018 were also audited by KPMG and provided with an unqualified audit certificate.

The Supervisory Board has acknowledged the report submitted by the Managing Board and has examined the annual financial statements including the management report and the annex to the audit report, the consolidated financial statements including the group management report and the annex to the audit report, as well as the financial statements of the Association including

the management report of the Association and the annex to the audit report upon previous involvement of the Audit Committee pursuant to Section 96 (1) Stock Companies Act. Said examination by the Supervisory Board has not resulted in any objections; in particular, the Supervisory Board found that the annual financial statements, the consolidated financial statements and the financial statements of the Association had been prepared correctly.

Hence, the Supervisory Board approves the annual financial statements including the management report, meaning that the same are approved under Section 96 (4) Stock Companies Act, the consolidated financial statements including the group management report and the annex to the audit report, as well as the financial statements of the Association including the management report of the Association and the annex to the audit report. Moreover, the Supervisory Board concurs with the results of the year-end audit, which were thoroughly discussed with KPMG in the Audit Committee, and consents to the proposal for the appropriation of profits as submitted by the Managing Board.

Under Section 243b Austrian Business Code and Section 267a Austrian Business Code, VOLKSBANK WIEN AG is obliged to provide a non-financial statement and a consolidated non-financial statement, respectively. These statements are summarised and published in a separate non-financial report (sustainability report). The sustainability report was submitted to the Supervisory Board and reviewed by the same. Moreover, the Supervisory Board charged KPMG Advisory GmbH with auditing the sustainability report; the relevant audit report has been submitted to the Supervisory Board. The reviews or audits by the Supervisory Board and by KPMG Advisory GmbH did not result in any objections, and the Supervisory Board concurs with the results of the audit by KPMG Advisory GmbH.

In the past business year, VOLKSBANK WIEN AG has again fulfilled the support function provided for by the shareholders and stipulated in Section 3 of the articles of association.

Finally, the Supervisory Board would like to thank the Managing Board and all employees for their high personal commitment and the successful work in the past business year.

Vienna, March 2019

For the Supervisory Board of VOLKSBANK WIEN AG:

Heribert DONNERBAUER, born 4 August 1965

GROUP MANAGEMENT REPORT

Report on the business development and economic situation

Business development

Already in the first half of 2018, the owners of VOLKSBANK WIEN AG (VBW) and of Waldviertler Volksbank Horn registrierte Genossenschaft mit beschränkter Haftung (VB Horn) resolved in the general meetings of both companies to contribute the banking operation of VB Horn to VBW; said contribution was effected in June 2018 by entering the same in the Companies' Register. Hence, all intended mergers were successfully implemented in due time to create the target structure of the Association of Volksbanks.

In February 2018, the Fitch rating agency raised the rating of the Association of Volksbanks by one notch to BBB. This also applies to the individual Volksbanks. The rating outlook is considered stable by Fitch.

Moody's rating agency continues to rate VBW with Baa1 and a stable outlook. The Aaa rating for VBW's covered bonds remains equally unchanged.

In the 2nd half of 2018, in particular, within retail banking, very good growth was achieved in lending business.

On 11 December 2018, Josef Preissl, Deputy Chairman of the Managing Board, resigned from office with effect from 31 December 2018.

Economic environment

According to preliminary information by the Austrian Institute of Economic Research (WIFO) (January 2019), Austria's gross domestic product has grown by 2.7% year-on-year. This constitutes a slight increase in dynamics as compared to 2017, when growth had only amounted to 2.6% based on revised data. Accordingly, the growth rate of the Austrian economy in the past year was markedly higher than that of the euro zone, which – according to estimates by the European Central Bank (ECB) – has grown by 1.9%. Growth in Austria was due both to industrial production and to booming construction as well as services sectors.

Against the background of this favourable economic setting, the Austrian unemployment rate decreased in the past year: it fell from 5.2% at the beginning of the year to 4.7% in November. The downward trend was even more pronounced in the euro zone: starting out from much higher values, the unemployment rate decreased from 8.6% at the beginning of the year to 7.9% in November. As in previous years, Austria was one of the countries with the highest inflation rates in the euro zone. According to the Harmonised Index of Consumer Prices, the inflation rate in Austria fluctuated between 1.9% and 2.4% in 2018, with around 2.1% for the full year. In the past year, the rates of price increases varied between 1.1% and 2.2% in the common currency zone, the most recent value, of December, being 1.6%.

Monetary policy in the euro zone remained expansive also in the previous year. The ECB left the main refinancing rate at 0.00%, the interest rate for the prime refinancing facility at 0.25% and the deposit rate at -0.40%. After reducing the volume of monthly net securities purchases from euro 80 billion to euro 60 billion already in April 2017, the ECB further decreased net purchases to euro 30 billion in January 2018 and to euro 15 billion in October. In December 2018, net securities purchases were ceased completely. Matured securities will continue to be reinvested.

Money market interest rates remained more or less unchanged throughout the past year. The 3-month rate started the year at -0.33%, ending it at -0.31%. Capital market yields slackened somewhat in 2018. The yield of the ten-year government bond in Austria fell from 0.58% to 0.48% in 2018, with intermediate highs around 0.81%. In Germany, it fell from 0.46% to 0.24%, with a peak of 0.77% in February.

In 2018, the tightening of monetary policy continued in the USA; in four steps, the Fed raised the target range for the Fed Funds Rate by a total of 100 basis points, to 2.25% – 2.50%. In that year, the euro depreciated from 1.21 USD/EUR to 1.15 USD/EUR. The euro also weakened against the Swiss franc, from 1.17 CHF/EUR in January to 1.13 CHF/EUR in December, which was due to a certain extent to the role of the CHF as a safe haven in the middle of macroeconomic risks increasingly perceived over the course of the year. In connection with a heightened sense of risk amid slackening economic data, a correction took place on the European equity markets in the fourth quarter, and the ATX ended the year with a decrease of just under 20%.

Regional development and branches of industry

Measured against the increase in gross value added in the first half of 2018 compared to the first half of 2017, the regional economic development in Vienna, with an increase of 2.6% year-on-year, while being robust, was nevertheless below the Austrian average of 3.4% Y/Y. On the other hand, construction and the number of overnight stays in tourism outperformed the overall Austrian average. The decline of sales in the retail industry was above-average, and also the increase in the number of employed persons, as well as growth in material goods production were less pronounced by comparison with other federal Länder. In the first half of 2018, the number of unemployed persons decreased, but this decrease remained below-average compared to other federal Länder.

In Lower Austria, the development of regional value added compared to other federal Länder was inconspicuous. At a growth rate of 3.6% Y/Y of gross value added in the first half of the year, the material goods production sector, which is very important for this federal Land, was very strong. High growth rates were also reported in the construction sector. The decline in the number of unemployed persons was more pronounced than in the other federal Länder.

At 2.5%, the growth in value added in Burgenland was similar to that in Vienna. Construction was remarkable here, in that it recorded a decrease in the first half of the year in Burgenland exclusively. Compared to the other federal Länder, material goods production remained below average, while tourism showed a slight increase. The number of unemployed persons decreased at an above-average rate.

In Styria, growth in gross value added outperformed the rest of Austria in the first two quarters of 2018 (plus 4.3%). Among the federal Länder, the situation on the labour market was above-average, with a below-average unemployment rate and the highest decrease in unemployment throughout Austria. The increase in the number of employed persons ranked in the top range as well. Styria also holds the record in material goods production. Tourism showed a strong performance, while sales in the retail industry were somewhat lower.

In the first half of 2018, Carinthia reported above-average growth in gross value added of 3.7%. This is due, among others, to above-average growth in material goods production, but also in tourism. The performance in the construction and retail industries was rather feeble by comparison with other federal Länder. Unemployment decreased markedly, the increase in the number of employed persons was particularly pronounced in the segment of business-related services.

After Styria, Upper Austria recorded the second best development of all federal Länder in the first half of 2018, with an increase of 3.8% in gross value added. The material goods production, which plays a very important role in Upper Austria, and the construction sector made an essential contribution in this respect. Tourism and the retail industry showed above-average performance as well. The decrease in the number of unemployed persons also exceeded the general Austrian trend.

In the first half of 2018, the economic development of the Land of Salzburg was more or less in line with the Austrian average. Gross value added was higher by 3.5% than in the comparative period of the previous year. Within Austria, Salzburg recorded the highest growth rate in construction, while underperforming in the retail industry and material goods production segment. Here, the decrease in unemployment was the least pronounced.

Tyrol showed an average performance in terms of gross value added, which was due to a very poor development in tourism and in the construction sector. The other sectors hardly deviated from the general Austrian trend. The decrease in unemployment was the second best within Austria. The number of employed persons increased, especially in the sphere of business-related services.

In the first half of 2018, Vorarlberg (together with Upper Austria) ranked second in terms of regional economic development. The main factors contributing to this were the strong development in construction, and also the above-average increase in employment in business-related services. Material goods production, on the other hand, performed weakly. Tourism equally reported the highest decrease by comparison with the rest of Austria. The increase in dependent employment was just average, while unemployment decreased at a below-average rate.

The favourable development of previous years continued in the Austrian residential real estate market in 2018. The price gap between Vienna and the other federal Länder decreased somewhat. In the second quarter of 2018, annual growth rates for the prices of freehold flats and single-family homes outside Vienna amounted to 6%. In Vienna, prices increased by 4.2% Y/Y. Affordability, based on the relationship between prices and disposable nominal income, had somewhat improved at the

beginning of 2018 compared to the previous year, both in Vienna and throughout Austria, with the relevant index of Oester-reichische Nationalbank (OeNB) being much less favourable in Vienna (97.4 points) than in the rest of Austria (121.1 points). The persistently high demand for residential real estate was also reflected in the credit market. At an average of 4.5% Y/Y, the growth rate of housing credits to private households was only slightly below that of 2017 in the third quarter of 2018.

Just like 2017, 2018 was another good year for the Austrian tourism sector. The 2017/2018 winter season recorded strong growth in overnight stays of 4.7%, with overnight stays by foreign tourists increasing even more (5.1%). Also from May to September 2018, the number of overnight stays increased by 2.2%, those of foreign guests even by 2.4%. In the 2018 summer season, the best result in terms of overnight stays ever since the summer of 1992 was achieved. Above-average growth rates were reported for commercial and private holiday apartments between May and October 2018. Overall, nominal sales in tourist travel increased by 7.3% during that period in Upper Austria – the highest growth rate of all of Austria –, followed by Vienna and Tyrol with +5.4% and +4%, respectively. The lowest growth rates were recorded in Burgenland and Styria with +0.8% and +0.9%, respectively.

Consolidated result for the 2018 business year

Due to the contributions made in the second half of 2017 and in the first half of 2018, the figures of the reporting period are comparable to those of the previous year to a limited extent only. IFRS 9 financial instruments entered into force with effect from 1 January 2018. According to IFRS 9 transitional provisions, any retrospective application to previous reporting periods is not required; therefore, the comparative figures from the 2017 financial year were not adjusted. In the course of transition to IFRS 9, also the presentation of the items was amended. The figures of the comparative period were adjusted to the amended structure.

The result of the VBW Group before taxes amounts to euro 72 million (2017: euro 49 million). The result of the group after taxes and non-controlling interest amounts to euro 70 million (2017: euro 54 million).

The net interest income for the 2018 business year amounts to euro 125 million, thus exceeding the income for the comparative period (2017: euro 121 million) by euro 4 million. The increase in interest income must be viewed within the context of an increase in interest expenditure from the subordinated bond issued in the fourth quarter of 2017.

In 2018, at euro +5 million, the risk provision item has improved against the comparative period (euro +2 million). This effect results from reversals of individual loan loss provisions and portfolio loan loss provisions.

The net fee and commission income in the reporting period amounts to euro 54 million, and was thus maintained at a stable level compared to the previous period (2017: euro 54 million). Decreases in lending business due to a transition in calculating the effective interest rate and in securities business were compensated through higher income in payment transactions and other services.

Net trading income amounts to euro 1 million for the reporting period and has fallen compared to the previous year (2017: euro 6 million). A decline in operations and measurement results of trading book derivatives that are used for hedging investment book items are the main reason for this change.

The result from financial investments for the reporting period amounts to euro 9 million, thus exceeding the comparative period (2017: euro -1 million) by euro 10 million. Basically, higher measurement results for derivatives contribute to this increase. The valuation of investment property in the amount of euro 4 million (2017: euro 0.2 million) includes income from realisation through a sale amounting to euro 3 million. The valuation of SPPI-non-compliant loans results in a loss of euro -3 million. The valuation of debts evidenced by certificates that are now measured at fair value through profit or loss, due to the business model, leads to a positive result in the amount of euro 2 million.

Apart from the income from cost allocations, the other operating result includes income from the contribution of VB Horn in the amount of euro 8 million (2017: contribution of Sparda euro 18 million). Income in the amount of euro 10 million was received from a contribution of the Gemeinschaftsfonds (common fund). Provisions for legal costs in the amount of euro 4 million were released in the 2018 business year. With regard to this position, a provision was made in the amount of euro -3 million for interest claims from corporate loans with floors. In the previous year, the position included the expenses for repayment of negative interest in the amount of euro -1 million. The bank levy is included with an amount of euro -2 million (2017: euro -2 million). Due to the impairment test carried out for the goodwills created through the contributions in previous years, said goodwills had to be depreciated by an amount of euro 8 million in the comparative period.

General administrative expenses of euro 222 million (2017: euro 205 million) have increased by comparison with the previous year. This increase is essentially due to the contributions of VB Horn and of Sparda. Within general administrative expenses, an increase also occurred in legal, auditing and consultancy expenses, as well as in IT expenses. Compared to the end of 2017, the headcount decreased by 29 employees from 1,327 and amounts to 1,290 employees as at 31 December 2018. Due to the contribution of Sparda, 142 employees joined VBW in the third quarter of 2017. Due to the contribution of VB Horn in the second quarter of 2018, the number of employees increased by 55.

Due to the "Adler" programme that started in the fourth quarter of 2018 and is meant to result in efficiency increases and cost reductions in subsequent years, provisions had to be formed for the reorganisation measures to be carried out in the sphere of HR and retail branches. In the previous year, provisions for reorganisation in the HR sphere were released.

In 2018, the result of the companies measured at equity amounted to euro 5 million (2017: euro 6 million). From the assumption of pro rata results, euro 2 million (2017: euro 1 million) were recognised. In the 4th quarter of 2018, an additional interest in VB Verbund Beteiligung was acquired. Upon initial recognition, it was valuated at euro 4 million. At VB Kärnten, depreciation in the amount of euro 1 million had to be effected in the business year. In the previous year, the impairments of this participation that were effected in previous years were reversed again due to the increase in fair value, in the amount of euro 5 million.

Due to the tax planning of the next four years, it was possible, in the reporting period, to recognise deferred tax assets for part of the tax loss carried forward. For tax loss carried forward in the amount of euro 204 million (31 December 2017: euro 268 million), no deferred tax assets are recognised as before. Deferred tax is recognised for the remaining valuation differences, especially in connection with the valuation of derivatives and securities.

Financial position

As at 31 December 2018, total assets amounted to euro 11.5 billion and have increased essentially due to the contribution of VB Horn and increases in loans to and receivables from customers, compared to the end of 2017 (euro 10.6 billion).

Loans to and receivables from credit institutions amounting to euro 2.0 billion have increased compared to the end of the previous period (euro 1.7 billion). The increase essentially results from higher refinancing requirements of the banks of the Association.

As at 31 December 2018, loans to and receivables from customers, less risk provisions, amount to euro 5.4 billion and have increased compared to the end of the previous year (euro 4.8 billion). About a quarter of the increase is due to the contribution of VB Horn.

The financial investments of euro 2.1 billion at the reporting date increased mainly because of investments in bonds in the hold to collect business model compared to the end of 2017 (euro 1.8 billion).

As at 31 December 2018, the assets held for sale shows the carrying amount of commercially used properties and vacant objects the sale of which has already been contractually agreed, or is very likely, as at 31 December 2018. In the 2018 business year, this position primarily shows the carrying amount of the headquarters in 1090 Vienna, Kolingasse.

At euro 3.1 billion, amounts owed to credit institutions have increased compared to the end of 2017 (euro 2.7 billion). The main reason are higher deposits of the Volksbanks with VBW. Amounts owed to customers in the amount of euro 6.3 billion have also increased compared to the end of 2017 (euro 5.8 billion). About half of the increase is due to the contribution of the VB Horn banking operation.

As at 31 December 2018, debts evidenced by certificates amount to euro 0.5 billion and have remained stable compared to 31 December 2017 (euro 0.5 billion).

Compared to the end of the previous year, equity has changed by euro 50 million. An amount of euro -26 million was recognised from the effects of initial application of IFRS 9. Due to the contribution of VB Horn and the associated capital increase, it was possible to increase equity by euro 17 million. The increase due to the result of the 2018 business year is countered by opposing effects from OCI and from the distribution of VBW to its shareholders in the amount of euro 8 million and in the amount of euro 1 million from the distribution of VB Rückzahlungsgesellschaft mbH to the federal government.

Report on branch establishments

The VBW Group does not have any branch establishments.

Financial performance indicators

As at 31 December 2018, the regulatory own funds of the VBW group of credit institutions amount to euro 1 billion (31 December 2017: euro 1 billion). The aggregate risk amount was euro 4.2 billion as at 31 December 2018 (31 December 2017: euro 3.5 billion). The CET 1 capital ratio in relation to total risk amounts to 14.28% (31 December 2017: 15.37%), the equity ratio in relation to total risk is 24.04% (31 December 2017: 27.11%).

Due to the amended classification of speculative real estate financing transactions, RWAs increased by euro 262 million as at 31 December 2018. Based on the available figures of the VBW group of credit institutions, however, the capital ratios continue to be complied with. Regulatory capital requirements were again increased by the ECB and constitute a challenge for the Association of Volksbanks, since meeting them will require capital enhancement measures.

Regulatory own funds, aggregate risk amount and the key indicators calculated therefrom were determined acc. to CRR (EU Regulation No. 575/2013). For more detailed information, please refer to the Notes.

Performance indicators	2018	2017	2016
Return on equity before taxes	12.1%	9.5%	2.9%
Return on equity after taxes	11.9%	10.4%	6.1%
Cost-income-ratio	78.8%	82.8%	85.2%

The ROE before taxes is determined as the quotient of result before taxes and the mean value of equity at the balance sheet date and the balance sheet date of the previous year.

The ROE after taxes is determined as the quotient of result after taxes and the mean value of equity at the balance sheet date and the balance sheet date of the previous year.

The operational cost-income-ratio is calculated from operating income in relation to operating expenses. The operating income consists of net interest income, net fee and commission income, net trading income, as well as the other operating result, and result from discontinued operation, if positive. The operating expenditure includes the general administrative expenses as well as the other operating result, and result from discontinued operation, if negative. The other operating result and the result from discontinued operation are adjusted for other taxes, deconsolidation result and IFRS 5 measurement.

The performance indicators shown are considered as customary within the industry and are essential factors for the credit rating of banks. Additionally, within VBW, the cost-income-ratio was defined as early warning indicator for the Bankensanierungs-und Abwicklungsgesetz [BaSAG, Act on the Reorganisation and Liquidation of Banks].

Non-financial performance indicators

VBW reports on concepts, results and risks relating to environmental matters, social and employee topics, human rights, corruption and bribery as well as diversity according to the Nachhaltigkeits- und Diversitätsverbesserungsgesetz (NaDiVeG; Sustainability and Diversity Improvement Act) in a separate sustainability report.

Report on the company's future development and risks

Future development of the company

Economic environment

Towards the end of 2018, the sentiment indicators in relation to the European economy and the data regarding industrial activity cooled down considerably, suggesting somewhat lower growth rates for the current year. According to the economic

forecast of the Austrian Institute of Economic Research (WIFO) published in December, the Austrian economy is expected to grow by 2.0% in 2019. In December, the ECB decreased its economic growth forecasts for the euro zone in 2019 to 1.7%. The OeNB forecast for Austria included in that figure is 2.0%. OeNB expects positive contributions to growth from all demand components, but a flattening development of investments and a slight downward trend in consumption. With an increasing savings rate of 7.1%, the OeNB expects real disposable household income to grow by 2.1%. According to the autumn forecast of the EU Commission, an increase in real household income may be expected in the most important countries of origin, which is likely to support tourism in Austria.

In Austria, the number of building permits has increased continuously in recent years. Additionally benefitting from demographic development, this provides the basis for a continuation of brisk construction activity. Increasing supply, high increases in the past, as well as the perspective of a tendency towards increasing interest rates may deflate the momentum of the dynamic price development, leading to some flattening. Even in case of any flattening of trends on the real estate markets, stable demand for credits is expected against the background of increasing household income. Economic activity, which is still expanding, even if its momentum was negatively affected at the beginning of the year, is expected to be associated with corresponding demand also for corporate loans.

OeNB expects that the Austrian inflation rate, which is still expected to be above 2% this year, will return to the ECB's target inflation rate of 1.9% by 2021. The forecast of the European Central Bank for the average inflation rate in the euro zone for 2019 amounts to a mean of 1.6%. Hence, the rate of price increases would not quite reach the target inflation rate of the European Central Bank of a little under 2% again in 2019, but would achieve the same approximately at 1.8% in 2021. This in combination with the ECB's monetary easing would suggest a continuation of the low-interest environment in 2019, although continuing monetary tightening in the USA should provide for a slight upward trend as regards returns, and also in Europe, a gradual normalisation of monetary policy is expected.

The risks associated with this outlook are manifold. They include, in particular, the introduction of trade obstacles that may affect Austrian exporters and suppliers and subsequently burden other companies and the employment situation of private households, which would also be reflected in banking business. A modification of growth rates in the neighbouring countries might also affect tourism to a certain extent. Tensions within the European Union in connection with the exit negotiations with Great Britain or any increase in political uncertainty in the member states, e.g. after elections, constitute a risk for the course of economic development within the region. A rapid rise in interest rates would also have to be classified as a risk for economic activity and the real estate markets. Additionally, geopolitical conflicts may also potentially harm the cautious (by comparison with previous years), but basically positive economic outlook.

Future development of the company

The focus of the Association of Volksbanks on retail banking is meant to be continued, supported, in particular, by increasing digitisation of the sales process. In the course of medium-term planning, the Association of Volksbanks has set itself a number of strategic goals, the accomplishment, observance and/or undercutting/exceeding of which will continue to be a management focus in the years to come. Among others, this includes achieving a cost-income-ratio of 60%, a CET 1 capital ratio of at least 12.25%, a total capital ratio of at least 16%, an NPE (non-performing exposure) ratio of not more than 3%, as well as a return on equity (ROE) of 8%.

In spite of persistently high investments in the systems, in improving data quality and in spite of the still high regulatory cost, VBW intends to achieve an annual result in the low two-digit million euro range. Despite planned growth, the CET 1 capital ratio is intended to continue to exceed 12% within the group.

The low interest rate environment expected to continue in 2019 calls for a streamlining of the cost structure and an increase of productivity to be continued in future. For this purpose, additional cooperation models were evaluated within the Association of Volksbanks, among others, that are going to be implemented in the next years.

Significant risks and uncertainties

As regards the legally required disclosures on the use of financial instruments, the risk management targets and methods as well as the existing risk of price changes, default, liquidity and cash flow risks, please refer to the information contained in the Notes (in particular the risk report in chapter 52).

Report on research and development

The VBW Group is not active in research and development.

Report on key characteristics of the internal control and risk management system with regard to the accounting process

Control environment

Observance of all relevant legal provisions is the ultimate ambition of the VBW Group within the scope of financial reporting. The Managing Board is responsible for establishing and organising an appropriate internal control and risk management system with respect to the accounting process and provides a framework for implementation applicable to the entire group in the ICS group policy. Within the VBW Group, responsibility for implementation lies with the OPRISK and Risk Governance groups within VBW.

In all companies included in the consolidated financial statements, the responsibility to define and introduce an appropriate ICS for the respective company and to ensure compliance with group-wide policies and regulations lies with the respective managing board or with the management. In order to ensure that the data provided by the Group subsidiaries are imported correctly, all data supplied is first checked for plausibility. The data is then processed using the Tagetik consolidation software. Checks are effected based on the dual-control principle as well as an additional review by the department manager.

Control measures are applied within the current business process to ensure that potential errors are prevented and/or deviations in financial reporting are revealed and corrected. The control measures range from revision of the various results for the period by the management up to specific reconciliations of accounts and items, and an analysis of the ongoing processes within group accounting. In this context, two types of controls are distinguished:

- Operational controls include manual controls performed by employees according to specific tasks, automatic controls
 carried out by means of IT systems, as well as preventive controls aimed at avoiding errors and risks in advance through
 separation of functions, definition of responsibilities and access authorisations.
- Management controls serve to ensure, on the basis of spot checks by managers, that operational controls are complied with. The intervals of the checks are defined by the respective manager (division manager, department manager) depending on the degree of risk involved. The spot checks are documented in the control schedule in a manner comprehensible to third parties, and the results are reported semi-annually within the scope of management reporting.

Additionally, Internal Audit verifies compliance with internal regulations independently and regularly, also in the sphere of accounting. As a staff function, Internal Audit is directly allocated to the Managing Board, it reports directly to the Chairman of the Managing Board and also to the Supervisory Board on a guarterly basis.

Risk assessment

Risks relating to the accounting process are identified and monitored by the process owners with a focus on materiality.

In preparing the financial statements, estimates must regularly be made in areas where there is an inherent risk that actual future developments may diverge from the estimates. This applies, in particular, to the following items and facts of the consolidated financial statements: the recoverability of financial assets, banking risks, employee benefits, as well as the outcome of legal disputes. In some cases, publicly available sources will be used or external experts will be consulted in order to minimise the risk of inaccurate estimates.

Information and communication

Guidelines and regulations regarding financial reporting are regularly updated by the management and communicated to all employees concerned.

The staff of the group accounting function are regularly briefed with respect to amendments in international accounting, in order to identify any risks of unintentional false reporting at an early stage. Moreover, employees in group accounting communicate this information to the employees of the subsidiaries.

Twice a year, a management report is prepared that contains statements regarding the completeness, comprehensibility, active implementation and effectiveness of the control system with respect to the accounting process.

Monitoring

Top management regularly receives summary financial reports, such as quarterly reports on the development of the respective segments and the most important financial performance indicators. Financial statements that must be published are subjected to a final check by executive employees within accounting, divisional management and the Managing Board before they are forwarded to the competent bodies. The result of the supervisory activity relating to the accounting processes is stated in the management report, which contains a qualitative risk assessment of the processes as well as a documentation of the number of checks carried out in relation to those specified.

NOTES

1) General information

VOLKSBANK WIEN AG (VBW) with its registered office at Kolingasse 14-16, 1090 Vienna, is the parent company of national acting subsidiaries and the central organisation (CO) of the Austrian Volksbank sector. In addition to the sector business with Volksbanks, the priorities in private and corporate customer business are based in Austria.

VBW as CO in accordance with section 30a Austrian Banking Act is part of the banking association (joint liability and liquidity association). The Association of Volksbanks is required to comply with the regulatory provisions of Parts Two to Eight of Regulation (EU) No 575/2013 and section 39a Austrian Banking Act, on the basis of the consolidated financial position (section 30a (7) Austrian Banking Act). VBW must continue to comply with all applicable regulatory provisions on a single-entity basis and at Group level. The members of the Association of Volksbanks have joint, unlimited liability and have contractually agreed to bear the costs and risks of the CO on a pro rata basis. By letter dated 29 June 2016, the ECB granted unlimited approval of the Association of Volksbanks.

The accounts have been prepared on the assumption that it will remain a going concern. The consolidated financial statements are reported in euros, as this is the Group's functional currency. All figures are indicated in thousands of euro unless specified otherwise. The following tables may contain rounding differences.

VBW reports concepts, results and risks in connection with environmental issues, social and employee concerns, human rights, corruption and bribery and diversity in accordance with the Sustainability and Diversity Improvement Act (Nachhaltigkeits- und Diversitätsverbesserungsgesetz - NaDiVeG) within the scope of the Group's reporting in a separate sustainability report.

The present consolidated financial statements were signed by the Managing Board on 13 March 2019 and then subsequently submitted to the Supervisory Board for notice.

2) Presentation and changes in the scope of consolidation

By way of an agreement on a transfer and contribution in kind dated 24 April 2018, Waldviertler Volksbank Horn registrierte Gesellschaft mit beschränkter Haftung contributed its undertaking, the Horn banking operation, to VBW, retaining cash assets in the amount of euro 0.8 million, all shares in Volksbank Wien AG as well as in Volksbank Wien Beteiligung eGen, one fixed income security in the amount of euro 1.1 million, one property situated in Horn as well as tax assets. The contribution in kind is effected against granting of 49,629 new no-par-value shares of VBW. Registration in the Companies' Register was effected on 20 June 2018.

The purchase price and the fair values of the acquired assets and liabilities determined based on purchase price allocation are set out in the table below:

Euro thousand	Horn
Liquid funds	2,561
Loans and receivables credit institutions	88,390
Loans and receivables customers	164,790
Risk provisions (-)	-714
Financial investments	51,344
Participations	1,343
Intangible assets	4
Tangible assets	2,046
Tax assets	294
Other assets	344
Amounts owed to credit institutions	-24
Amounts owed to customers	-277,419
Provisions	-6,051
Other liabilities	-1,415
Net assets acquired	25,494
Purchase price = capital increase	17,175
Gain from bargain purchase	8,319

Gain from bargain purchase mainly results from the acquired capital resources of VB Horn which distinctly exceeds the purchase price. The purchase price was based on VB Horn's earnings potential.

As the purchase price was settled through share issues by VBW, there was no cash outflow from the Group. The cash inflow relates to the cash reserve acquired. Impaired loans and receivables are displayed on a gross basis in the table above. To ensure that the data is consistent with the risk management systems and regulatory reporting, risk provisions acquired as part of the acquisition have been reported separately. Any adjustments to reflect fair value were reported in the items loans to and receivables from credit institutions or loans to and receivables from customers. Identification of the acquired assets and liabilities as well as their fair value measurement are based on estimates and assumptions.

Fair value, gross value of receivables acquired as well as cash flows expected to be irrecoverable as at the acquisition date are as follows:

Euro thousand	Horn
Fair value of purchased receivables	164,790
Gross amount of receivables	161,066
Estimated unrecoverable receivables	-714

Fair values of euro 59 thousand were determined for guarantees in force and credit facilities committed as at the acquisition date and recognised as provisions. Maturities are mainly at one year. Cash outflows of approximately euro 59 thousand are expected during this period.

Incidental acquisition costs are recognised in other operating expenses in the income statement and amount to euro 71 thousand.

Information about the amount of net interest income and the annual result after taxes achieved in the acquired banking operations since the date of acquisition is not available as no separate records are available after the merger.

If VB Horn had already been acquired on 1 January 2018, net interest income of VBW Group would have been higher in total by euro 936 thousand and the annual result after taxes would have been lower by euro 9 thousand.

Participation right of the federal government

The federal government's participation right was issued for the purpose of meeting those commitments made by the EU Commission to the federal government for the purpose of obtaining approval of the reorganisation under the funding guidelines. The participation right was issued by VB Rückzahlungsgesellschaft mbH (RZG), a direct subsidiary of VBW.

Distributions of RZG based on the federal government's participation right are subject to the discretion of VBW as sole shareholder of RZG. No claim for profit shares exists under the federal government's participation right. In that context, shareholders of VBW have transferred VBW shares (at a rate of 25 % of the share capital plus 1 share) to the federal government without consideration. The transfer of the shares to the federal government was effected on 28 January 2016. The federal government is obliged to transfer these shares back to the respective shareholders without consideration, as soon as the aggregate amount of distributions received by the federal government under the participation right and certain other creditable amounts reaches a certain level. Should the distributions under the federal government's participation right, as received by the federal government on contractually determined effective dates, fail to reach certain minimum amounts agreed (disposition event), taking account of certain creditable amounts (such as any distributions on the shares held by the federal government in VBW), then the federal government shall be entitled to freely dispose of said shares without any further consideration and to claim additional ordinary shares of VBW from the VBW shareholders, in the amount of 8 % of the share capital of VBW without any further consideration. Therefore, if the disposition event occurs, up to 33 % plus 1 share of the VBW shares may transfer to the (legal and beneficial) ownership of the federal government, and the latter would be able to freely dispose of said holding of shares (subject to the pre-emptive right granted). In case the pre-emptive right granted by the federal government is exercised by a purchaser nominated by VBW and a minimum threshold for the sum of the distributions in respect of the federal government's participation right and of the creditable amounts is missed again, the shareholders of VBW have undertaken to transfer to the federal government additional ordinary shares of VBW in the amount of the VBW shares previously transferred to the federal government and acquired by the purchaser nominated by VBW, with immediate unrestricted power of disposition of the federal government.

According to its contractual obligations towards the federal government, VBW must submit to the Volksbanks a proposal for the total amount to be distributed with respect to the federal government's participation right by RZG in the subsequent calendar year and for the total amount of the primary banks' contributions required for this purpose (indirect contributions of the Volksbanks and direct contribution of VBW to RZG) by 30 November of each year. VBW is charged according to the share of its retail segment in the Association of Volksbanks (total assets UGB/BWG). Of the repayment amount of euro 300 million promised to the federal government, euro 75 million have already been repaid as at 31 December 2018. Accordingly, the threshold existing at 31 December 2019 for the minimum repayment in the amount of euro 75 million was met prematurely.

Number of consolidated companies

	31	Dec 2018		31 Dec 2017		
	Domestic	Foreign	Total	Domestic	Foreign	Total
Fully consolidated companies						
Credit institutions	1	0	1	1	0	1
Financial institutions	1	0	1	1	0	1
Other companies	7	0	7	7	0	7
Total	9	0	9	9	0	9
Companies measured at equity						
Credit institutions	1	0	1	1	0	1
Other companies	1	0	1	1	0	1
Total	2	0	2	2	0	2

Number of unconsolidated companies

	31 Dec 2018			31 Dec 2017		
	Domestic	Foreign	Total	Domestic	Foreign	Total
Affiliates	6	0	6	7	0	7
Associated companies	3	0	3	3	0	3
Companies total	9	0	9	10	0	10

The unconsolidated companies in their entirety were deemed immaterial to the presentation of a true and fair view of the net assets, liabilities, financial position and profit or loss of the Group. In addition to quantitative criteria like total assets and result after taxes, the effect of consolidation on specific positions as well as on the true and fair view of the consolidated financial statements is taken into account for the assessment of materiality. The calculation of the quantitative characteristics was based on the latest available financial statements of the companies and the Group's consolidated financial statements for 2018.

The complete list of companies included in the consolidated financial statements, companies measured at equity, as well as the unconsolidated companies including detailed information, can be found at the end of the notes (see note 53), 54), 55)).

3) Accounting principles

The accounting principles described below have been consistently applied to all reporting periods covered by these financial statements and have been followed by all consolidated companies without exception.

VBW Group's consolidated financial statements for 2018 as well as the comparative figures 2017 have been prepared in accordance with the IFRS/IAS and thus fully comply with the provisions set out in section 245a of the Austrian Commercial Code and section 59a of the Austrian Banking Act regulating exempting consolidated financial statements prepared in accordance with internationally recognised accounting principles.

The consolidated financial statements have been prepared in accordance with all IFRS/IAS published by the International Accounting Standards Board (IASB) in force on the balance sheet date as well as all interpretations of the International Financial Reporting Interpretations Committee (IFRIC) and the Standing Interpretations Committee (SIC) as endorsed by the European Union (EU). Currently there are no differences between the IFRS adopted by the EU and the IFRS published by the IASB.

The consolidated financial statements have been prepared based on at cost measurement excluding the following items:

- Derivative financial instruments measured at fair value
- Financial instruments in the category at fair value through profit or loss and at fair value through other comprehensive income (OCI)
- Investment property measured at fair value
- Financial assets and liabilities which constitute underlying instruments for fair value hedges amortised costs are adjusted for changes in fair value, which are to be allocated to hedged risks
- Financial liabilities measured at fair value through profit or loss (fair value option)
- Deferred taxes for temporary differences between tax and IFRS values, those amounts are recognised resulting in a future tax burden or relief at the time of inversion
- Employee benefit provisions recognised at net present value less the net present value of plan assets

As at 1 January 2018 the regulations of accounting standard IFRS 9 – financial instruments took effect. Further details regarding initial application of IFRS 9 are illustrated in this chapter. Adjustments as well as effects of the new regulations are described in this chapter as well. In addition, in the course of transition to IFRS 9 the item structure was modified and the figures of the comparative period adjusted accordingly.

The following two chapters present amended and new accounting standards significant to the consolidated financial statements of VBW.

Initially applied standards and interpretations

Standard	Content	Mandatory application	Significant effects on VBW
New standards ar	nd interpretations		
IFRS 9	Financial instruments	As of BY 2018	Yes
IFRS 15	Revenue from contracts with customers	As of BY 2018	No
	Foreign currency transactions and advance		
IFRIC 22	consideration	As of BY 2018	No
Amendments to s	standards and interpretations		
	Amendments to IFRS 4 - Applying IFRS 9 Financial		
IFRS 4	instruments with IFRS 4 Insurance contracts	As of BY 2018	No
IAS 40	Transfer of investment property	As of BY 2018	No
	Classification and measurement of share-based		
IFRS 2	payment transactions	As of BY 2018	No
Annual improve	ements of IFRS (cycle 2014-2016)	As of BY 2017 and 2018	No

BY - business year

Standards and interpretations to be applied in the future

		Mandatory	Significant effects
Standard	Content	application	on VBW
IFRS 16	Leases	As of BY 2019	Yes
IFRIC 23	Uncertainties regarding income tax treatments	As of BY 2019	No
IFRS 9	Prepayment features with negative	As of BY 2019	No
	compensation		
IAS 19	Plan amendment, curtailment or settlement	As of BY 2019	No
IAS 28	Long-term interests in associates and joint ventures	As of BY 2019	No
IAS 1 and IAS 8	Definition of materiality	As of BY 2020	No
IFRS 3	Business combinations	As of BY 2020	No
IFRS 17	Insurance contracts	As of BY 2021	No
Annual improvem	nents of IFRS (cycle 2015-2017)	As of BY 2019	No

a) Initially applied standards and interpretations

IFRS 9 Financial instruments: As at 1 January 2018, the VBW Group has been applying IFRS 9 Financial Instruments. It contains regulations for the classification and measurement, derecognition and impairments of financial assets, as well as hedge accounting and supersedes IAS 39 – Financial Instruments: recognition and measurement. Additionally, under the regulations, companies are required to provide readers of financial statements with more informative, more relevant details in the notes. The application of the supplement to IFRS 9 regarding early repayment of loans, adopted into European law in March 2018, provides clarifications with respect to SPPI-compliance of these interest and redemption payments. No material effects on the VBW Group will result from these amendments.

By comparison with IAS 39, balance sheet equity has decreased by euro -26 million. This was mainly due to changes in the risk provision methodology compared to IAS 39, and the required reclassification of the respective financial instruments. Applying IFRS 9 impairment provisions as at 1 January 2018 resulted in a positive change of the impairments reported of euro 9.3 million (before deferred tax). Loans in the amount of euro 185 million is now measured at fair value, as the benchmark test that was carried out was negative for critical fixed interest rate periods, resulting in a reduction of equity by euro -5.3 million (before deferred tax). Regarding securities, a volume of euro 1,380 million is allocated to the Hold to collect business model, a volume of euro 379 million to the Hold to collect and sell business model and a volume of euro 46 million to the Other business model. When hedge accounting is factored in, the negative effect on equity due to the revaluation of securities amounts to euro -30.3 million (before deferred tax). Moreover, for structured own issues with a volume of euro 82 million that were designated as hedge accounting under IAS 39, the fair value option was applied. The change in equity due to reclassification has entailed a reduction of euro -9 million (before deferred tax), as a consequence of reclassification.

A detailed presentation of the effects on the VBW Group is shown in note c) Changes to accounting and valuation methods.

IFRS 15 – Revenue from contracts with customers: IFRS 15 is to be applied to sales revenue from customer contracts and replaces the previously applicable standards IAS 11 and IAS 18 as well as IFRICs 13, 15 and 18. IFRS 15 provides for a principle-based five-step model, which regulates the way how, the extent to which and the point in time when revenues are to be realised. Sales revenue must be realised if the customer has the power of disposition with respect to the agreed services. This may take place either based on a period or a point in time. The transfer of opportunities and risks is no longer decisive. Sales revenue must be measured at the amount of the consideration which the company expects to receive. Application of the standard is mandatory for financial years commencing on or after 1 January 2018.

Interest income and dividends from ordinary operations previously governed by IAS 18 are only covered by IFRS 15 to a limited extent. The provisions under IFRS 9 are applicable to the remuneration for financial services, provided they constitute an integral part of the effective interest rate. In terms of content, this will not have any effect on VBW Group's consolidated financial statements compared to the previous way of procedure. For this reason, the distinction of revenue from income from financial instruments according to IFRS 15 covered by IFRS 9, as well as income from leases under IFRS 16 and/or IAS 17 is of importance to the VBW Group.

Application of IFRS 15 for the areas or items identified did not result in any material effect for the VBW Group.

Please refer to note 6) Net fee and commission income for further details regarding fee and commission income and expense.

Annual improvements of IFRS (2014-2016 cycle)

The amendments relate to wording in need of improvement and clarifications. Standards IFRS 1, IFRS 12 and IAS 28 were concerned. As regards IFRS 1 and IAS 28, application of the new provisions is mandatory for reporting periods commencing on or after 1 January 2018; as regards IFRS 12, application is mandatory for reporting periods commencing on or after 1 January 2017. The amendments will not have any significant effects on the VBW group.

b) Standards and interpretations to be applied in the future

IFRS 16 - Leases: In the fourth quarter of 2017, the VBW Group initiated a project for analysing all leases with respect to accounting and effects. The primary effects of the new standard are on the accounting of contracts previously designated as operating lease. Almost all leases are recognised in the balance sheet of the lessee.

Upon initial application of IFRS 16 as at 1 January 2019, the VBW Group expects to recognise right-of-use assets in the amount of approximately euro 81 million; correspondingly, leasing liabilities will be recognised in the same amount. The rights of use primarily relate to buildings, as well as motor vehicles and parking spaces. The present value of the loans constitutes the amount recognised of the right-of-use assets. The present value was determined from the contractual leasing payments, the respective residual terms and the incremental borrowing rate. In the statement of comprehensive income, in the 2019 business year, expenditures are expected to be higher due to the split of leasing expenses into an interest component and an impairment component, compared to a linear distribution of expenses, in the amount of approximately euro 0.8 million. The VBW Group exercises its option not to capitalise any right-of-use assets side for short-term leases, as well as leases for low-value assets. Accounting at the lessor will change only slightly compared to IAS 17, and therefore no material effects on the VBW Group are expected, except for more comprehensive information in the notes.

The VBW Group has decided to apply modified retroactive recognition, which means that the previous year's comparative figures are not adjusted, and accordingly adjustments are basically reported in retained earnings in the course of the transition. Upon initial application, the amount recognised for right-of-use assets corresponds to the leasing liabilities within the Group and will therefore have no effects on equity at the date of initial application.

IFRIC 23 – Uncertainty regarding income tax treatments: The interpretation clarifies how regulations regarding recognition and measurement under IAS 12 Income taxes must be applied in case of any uncertainties regarding income tax treatments. Application of IFRIC 23 is mandatory for the first time in reporting periods commencing on or after 1 January 2019. The amendments were adopted into European law by the EU in October 2018. The amendments are not expected to have any significant effect on the VBW Group.

IFRS 17 – Insurance contracts: The new standard is applicable not only for insurance companies but also for entities issuing insurance contracts within the scope of the standard. The aim of IFRS 17 is the consistent, principle-based accounting of insurance contracts and requires the valuation of insurance liabilities at their current performance value. This results in consistent valuation and presentation of all insurance contracts. The standard is applicable to financial years commencing on or after 1 January 2021. The amendments need yet to be adopted into European law by the EU. This standard will not have any significant effect on the VBW Group.

Annual improvements to IFRS (2015-2017 cycle)

In December 2017, the IASB published several amendments of existing IFRS within the scope of its annual improvements to IFRS (2015-2017 cycle). These include wording in need of improvement and clarifications regarding IFRS 3, IAS 12 and IAS 23 effecting the recognition, measurement and reporting of business transactions. Application of the amendments to the standards is mandatory for reporting periods commencing on or after 1 January 2019. Application of

the amendments prior to that date is admissible. The amendments need yet to be adopted into European law by the EU. The amendments are not expected to have any material effects on the VBW Group.

c) Changes in accounting and valuation methods

The application of IFRS 9 resulted in changes regarding the classification and measurement of financial assets and liabilities, as well as the impairment of financial assets. Based on the option regarding hedge accounting that is provided for in the standard, a decision was made to apply IFRS 9 provisions also to hedge accounting. Additionally, the VBW Group has applied subsequent amendments regarding IFRS 7 Financial Instruments - Disclosures to the explanatory notes for the 2018 business year. The respective disclosure obligations of these financial instruments are derived from IFRS 7 and IFRS 13. Disclosures, reasons and the date of the reclassifications between valuation hierarchies, the reconciliation of opening and closing balances for Level 3 holdings at a certain reporting date, and the unrealised gains and losses must be indicated. However, this has not generally been applied to comparative information.

Due to transitional provisions under IFRS 9, retroactive application to previous reporting periods is not required; therefore, the effect from initial application is reflected in equity within the opening balance for the 2018 business year. Accordingly, the comparative figures of the 2017 business year have not been adjusted as a matter of principle. In the course of transition to IFRS 9, also the presentation of the items was amended and the figures of the comparative period were adjusted accordingly.

Classification and recognition of financial instruments

Within the scope of evaluating the classification of debt instruments, apart from verifying the business model criterion, the contractually agreed cash flows also need to be analysed. Potentially critical contract components require special attention, requiring a benchmark test under certain conditions. Due to the required classification of all financial assets and liabilities, users of the financial statements should be able to better estimate the amount, timing and uncertainty of future cash flows. At the time of addition, all financial instruments basically have to be recognised at fair value. This principle of addition applies regardless of the classification of any financial instrument.

IFRS 9 describes four types of subsequent measurement of financial assets that depend on the respective business model and/or fulfilment of the cash flow criterion (SPPI criterion):

- Measured at amortised cost
- Measured at fair value through OCI with recycling
- Measured at fair value through OCI without recycling
- Measured at fair value through profit or loss

The allocation of financial assets to any of the following business models takes place at management level and is derived from the way in which the financial assets are controlled to generate cash flows:

- Business model Hold to collect: collecting contractual cash flows from infrequent sales activities or sales activities of insignificant value.
- Business model Hold to collect and sell: collecting cash flows both from holdings and from sales.
- Business model Other: all portfolios that cannot be attributed to any of the two previous business models. These include, in particular, trading portfolios controlled on a fair value basis, the collection of contractually agreed cash flows is secondary. The main aim is to maximise cash flows through buying and selling.

A business model aims or is meant to control financial assets in a certain manner. The evaluation of business models was effected on the basis of various criteria such as targets, compensation, performance measurement, management and/or risk strategy, frequency and timing of selling transactions, as well as reasons for the selling transactions. Based on these criteria, individual portfolios or sub-portfolios were created within the business models. Apart from analysing, defining and stipulating the business model condition, analysing the arrangement of the cash flows of financial instruments is also required for them to be classified appropriately. The decisive criterion of assessment is whether there are exclusively non-leveraged interest and redemption payments on the outstanding principal. Basically, any financial instrument will only be considered as SPPI-compliant if its contractual cash flows correspond to those of any simple loan financing. Moreover, pursuant to IFRS 9, no distinction is required to be made any longer between the original underlying instrument and the embedded derivative. The financial asset is assessed as a whole and classified based on the business model and the contractual cash flow condition. Allocation to the business model takes place at portfolio level, while the cash flow criterion must basically be checked for each individual financial instrument that was allocated to the Hold to collect and Hold to collect and sell business models, respectively.

Measurement at amortised cost requires that the financial asset is associated with SPPI-compliant cash flows and that it was allocated to a portfolio with the Hold to collect business model. Measurement at fair value through OCI with recycling is applied to financial assets with cash flows meeting the cash flow criterion that were allocated to a portfolio with the Hold to collect and sell business model. Upon disposal of the financial instrument, the cumulative fluctuations in value recorded in OCI must be reported in the income statement (recycling). Subsequent measurement at fair value with reporting of the fluctuations in value in the income statement is mandatory, if either the financial instrument was not allocated to any portfolio of the two above-mentioned business models or their cash flows are not SPPI-compliant. Additionally, using the fair value option, it is also possible to designate financial assets, voluntarily and irrevocably upon initial recognition, as measured at fair value through profit or loss, if any recognition and measurement inconsistency can be avoided. Since equity instruments do not cause any fixed repayments, and as only share rights are associated with them, the cash flow criterion is not met, and they will always be measured at fair value through profit or loss. However, upon addition of any equity instrument, an irrevocable decision may be made to measure the same at fair value through OCI without recycling, by exercising the OCI option.

Changes of classification and measurement

Based on the list of criteria for determination of the business models and the SPPI criterion, portfolios were defined for the VBW Group within the loan and securities division and allocated to the business models. The business model assessment in the loan division has shown that the objective is basically portfolio maintenance and growth in the Retail/SME, model, commercial, project and real estate financing spheres. No performance-based, variable compensation or selling transactions are intended. Risks included in the loan portfolio are minimised using, among others, interest rate derivatives or sub-participations. Accordingly, all portfolios in the loan sphere are allocated to the Hold to collect business model, unless there is an intention to sell loans. As at 31 December 2018 there were no intentions to sell loan portfolios. Accordingly, all loans were allocated to the Hold to collect business model within the VBW Group.

Identification of the business models for securities portfolios revealed that in the investment book remuneration is independent in terms of performance measurement. Performance is basically measured by net interest income. No performance-based, variable compensation has been scheduled. Within the positions in the investment book, no differentiation in terms of management and risk strategies is effected either. All investments within the investment book are made within the scope of the group-wide investment strategy and basically show a low credit risk profile. Accordingly, identification of the business models essentially took place based on the following parameters: investment goals, such as compliance with regulatory requirements or realising returns, as well as reasons for and frequency of selling transactions. The VBW Group defines as compliant any sales of positions that do no longer fit the investment strategy due to a signifi-

cant increase in default risk, taking place shortly before maturity and the sales proceeds approximately correspond to the remaining contractual payments, which are effected, among others, due to expiration of the basis of the business taking place within the scope of a strategic reorientation associated with regulatory or risk-related considerations. The different portfolios within the VBW Group result from different objectives for investments in the investment book.

As for participations, the initial application of IFRS 9 does not result in any transition effect, only a reclassification from reserves to equity, as all material participations were already reported at fair value as at 31 December 2017.

For financial liabilities, classification and measurement under IFRS 9 remain unchanged, with the exception that gains and losses from a financial liability designated at fair value through profit or loss, emerged due to changes of the bank's own credit risk, are reported in other comprehensive income.

Accounting of impairments of financial assets

The new regulations regarding impairments under IFRS 9 must be applied to financial assets classified as at amortised cost and at fair value through OCI, as well as to off-balance sheet loan commitments and financial guarantees. Therefore, not only losses already occurred but also expected losses must be recognised. In this context, a distinction is made as to whether or not the default risk of financial assets has deteriorated significantly since their initial recognition. If a significant deterioration has occurred, and if the default risk cannot be assessed as low as at the reporting date, all lifetime expected credit losses must be recognised with effect from that date. In case of significant deterioration and low default risk, only those losses expected for the lifetime of the financial instrument must be taken into account that result from future potential loss events within the next twelve months. Exceptions exist for trade receivables. For these assets, all expected losses must (receivables without any significant financing component) or may (receivables with a significant financing component and lease receivables) be taken into account already at initial recognition. For further details, please refer to note risk provisions.

Accounting of hedging relationships

As at 1 January 2018, hedge accounting according to IFRS 9 was applied within the VBW Group. The aim of the new rules is for hedge accounting to be related more clearly to the economic risk management of the company. As previously, companies are obliged to document the respective risk management strategy including risk management goals at the beginning of a hedging relationship; but now, the relationship between the hedged underlying transaction and the hedging instrument has to correspond to the requirements of the risk management strategy. The comprehensive disclosure requirements for hedge accounting due to IFRS 9 and according to IFRS 7 are met in note 39) Hedging.

Based on the amendments under IFRS 9, VBW has been applying new hedge constellations, such as layer hedge accounting, since 2018. Within VBW, parts of portfolios of fixed-income loans are hedged using layer hedge accounting.

Transition

The following tables show the transition from the values stated as at 31 December 2017 according to IAS 39 to those stated after initial application of IFRS 9 as at 1 January 2018.

Reclassification and valuation of financial instruments

The following table shows the changes between valuation categories and the carrying amounts of financial assets and liabilities according to IAS 39 and IFRS 9 as at 1 January 2018.

Financial liabilities - total	9,908,704	0	9,158	9,917,861

At initial application of IFRS 9 securities measured at fair value were reclassified to the category Amortised cost. The fair value of these securities amounts to euro 1,065,313 thousand as at 31 December 2018. The loss from the change in fair value which would have been reported if the reclassification would not have taken place amounts to euro 21,061 thousand.

Impairment

The following table shows effects on impairments for on and off-balance sheet positions affected by IFRS 9.

	Risk			Risk
	provisions IAS 39			provisions IFRS 9

d) Application of estimates and assumptions

All assumptions, estimates and assessments required as part of recognition and measurement in line with IFRS are carried out in accordance with the relevant standard, are re-evaluated on an ongoing basis and are based on historical experience and other factors including expectations regarding future events that appear reasonable in the particular

circumstances. These estimates and assumptions have an influence on the amounts shown for assets and liabilities in the statement of financial position and income and expenses in the income statement.

In case of the following assumptions and estimates, there is the inherent possibility that the development of overall conditions contrary to expectations as at the reporting date may lead to considerable adjustments of assets and liabilities in the following business year.

- Alternative investment measurement methods are used to assess the recoverability of financial instruments for which no active market is available. Some of the parameters taken as basis when determining fair value are based on assumptions concerning the future.
- The assessment of the recoverability of intangible assets, goodwill, investment properties and tangible assets is based on assumptions concerning the future.
- The recoverability of financial instruments measured at amortised cost or at fair value through OCI is based on future assumptions.
- The recognition of deferred tax assets is based on the assumption that sufficient tax income will be generated in the future in order to realise existing tax loss carryforwards; where required no deferred tax assets were recognized.
- Assumptions regarding the interest rate, retirement age, life expectancy and future salary increases are applied when measuring existing long-term employee provisions.
- Provisions are measured based on cost estimates from contractual partners, past experience and investment calculation methods.
- Assessments are regularly carried out for liabilities and impairment not recognised in the balance sheet due to guarantees and contingencies in order to determine whether on-balance sheet recognition in the financial statement is to be carried out.

If estimates were required to a greater extent, the assumptions made are shown with the note on the corresponding item. Actual values may deviate from the assumptions and estimates made if overall conditions develop contrary to expectations as at the balance sheet date. Amendments are recognised in profit or loss and assumptions adjusted accordingly once better information is obtained. As at 31 December 2018, the scope of consolidation of VBW does not include any foreign subsidiary in foreign currency.

e) Consolidation principles

The consolidated financial statement is based on the separate financial statements of all fully consolidated companies prepared in accordance with IFRS. The figures reported in the individual financial statements of associated companies measured at equity have been adjusted to Group accounting principles where the effects on the consolidated financial statements were significant.

The financial statements of the fully consolidated companies and the companies consolidated using the equity method were prepared based on the Group's reporting date of 31 December 2018.

Business combinations with a contract date on or after 31 March 2004 are accounted for using the purchase method set out in IFRS 3. Accordingly, all identifiable assets, liabilities and contingent liabilities are recognised at their fair values at the acquisition date. If the cost of acquisition exceeds the fair value of the identifiable assets, liabilities and contingent liabilities, goodwill is recognised as an asset. The full goodwill method is not in use. Goodwill is not amortised over the estimated useful life, but instead is tested for impairment annually in accordance with IAS 36. Negative goodwill is recognised directly in income in accordance with IFRS 3 after re-examination. Any change in contingent consideration recognised.

nised as a liability at the acquisition date is recognised in profit or loss. Transactions, which do not lead to a loss of control are recognised directly in equity.

Subsidiaries under the direct or indirect control of VBW are fully consolidated if these are material for a true and fair view of the net assets, liabilities, financial position and profit or loss of the Group. Companies in which VBW holds an equity interest of between 20 % and 50 % and for which controlling agreements do not exist are consolidated using the equity method; they are not consolidated if they are not significant for the Group.

Intragroup balances and any unrealised gains and losses or income and expenses arising from intragroup transactions are eliminated in preparing the consolidated financial statements.

f) Currency translation

In accordance with IAS 21, foreign currency monetary assets and debts, non-monetary positions stated at fair value and unsettled spot transactions are translated using the spot exchange mean rate, whereas unsettled forward transactions are translated at the forward exchange mean rate prevailing on the balance sheet date. Non-monetary assets and liabilities carried at amortised cost are recognised at the prevailing rate on the acquisition date.

The individual financial statements of fully consolidated companies prepared in currencies other than the euro are translated using the modified closing rate method set out in IAS 21. Under this method, all assets and liabilities are translated at the spot exchange mean rate effective on the balance sheet date, while the historical rate is applied for the translation of equity. Differences resulting from the translation of the financial statements of foreign subsidiaries are recognised in the currency translation reserve in equity. Any goodwill, disclosed hidden reserves and liabilities arising from the initial consolidation of foreign subsidiaries prior to 1 January 2005 have been translated at historical rates. Any goodwill, disclosed hidden reserves and liabilities arising from business combinations after 1 January 2005 are translated at the spot exchange mean rate on the Group's reporting date.

Income and expense items are translated at the average spot exchange mean rate for the reporting period, calculated on the basis of the end-of-month rates. Exchange differences between the closing rate applied for the translation of balance sheet items and the average rate used for translating income and expense items are recognised in the currency translation reserve in equity.

g) Net interest income

Interest income and interest expenses are recognised on an accrual basis in the income statement. Current or nonrecurring income or expenses similar to interest, such as commitment fees, overdraft commissions or handling fees, are reported in net interest income in accordance with the effective interest method. Premiums and discounts are amortised over the term of the financial instrument using the effective interest method and reported in net interest income.

The unwinding effect resulting from the calculation of the risk provision is shown in interest income.

Net interest income consists of:

- Interest and similar income from credit and money market transactions (including unwinding effect from risk provi-
- Interest and similar income from fixed-income securities
- Interest and similar expenses for deposits
- Interest and similar expenses for debts evidenced by certificates and subordinated liabilities
- The interest component of derivatives reported in the investment book

Interest income and expenses from trading assets and liabilities are recognised in net trading income.

h) Risk provision

The item risk provision includes the allocation to and release of individual loan loss provision and of portfolio loan loss provision for loans and receivables evidenced by certificates and those not evidenced by certificates. Direct write-offs and income from loans receipts from receivables previously written off, as well as modification gains or losses of financial assets are also recognised in this item. Allocations to and releases of off-balance sheet risk provisions are also shown in the risk provisions.

The valuation models are based on statistically calculated parameters, such as historical default and loss ratios. The methods and parameters used are validated regularly in order to approximate the estimated and actual defaults and losses. The process for determining the impairment is computer-aided, using an impairment tool specifically developed for this purpose. Details regarding determination of the risk provisions are described in note Financial assets and liabilities as well as in note 52) Risk report b) Credit risk.

i) Net fee and commission income

This item contains all income and expenses relating to the provision of services as accrued within the respective reporting period. Commissions and fees for services provided over a certain period of time are collected throughout the relevant period. This includes fees and commissions from lending business and clearing business, liability commissions as well as custody and management fees. However, commissions or fees for transaction-based services provided to third parties are collected upon completion of service provision. Essentially, this concerns the procurement of insurance policies, building loan contracts and loans as well as securities transactions. In those instances where an associated financial instrument exists, any commissions that are an integral component of the effective interest rate are shown as part of interest income.

j) Net trading income

All realised and unrealised results from financial investments, foreign currency positions and derivatives held for trading (assets and liabilities held for trading) are reported in this item. This includes changes in market value as well as all interest income, dividends and refinancing expenses for assets held for trading. Results from the daily measurement of foreign currency positions are also reported in net trading income.

k) Result from financial investments

The result from financial investments consists of:

- Realised gains and losses from disposal of financial investments
- Valuation gains and losses of financial instruments
- Result from hedge accounting
- Result from other derivative financial instruments
- Income from equities and other variable-yield securities
- Income from investments in unconsolidated affiliates, from investments in companies with participating interest and other participations
- Income from operating lease and investment property

Results from disposals of financial assets measured at amortised cost or debt instruments measured at fair value through OCI (with recycling) are shown in the realised gains and losses from sale of financial investments. In case of

derecognition of debt instruments measured at fair value through OCI, a reclassification from fair value reserve - debt instruments to the income statement takes place.

The fair value changes of financial assets measured at fair value through profit or loss and of financial liabilities where the fair value option is applied are reported in revaluation gains and losses of financial instruments.

I) Other operating result

This item contains the result from the derecognition of tangible and intangible assets, allocations to and releases of provisions, impairments of goodwill, valuations of IFRS 5 disposal groups and the deconsolidation result from the disposal of subsidiaries as well as taxes and constitutions for banking business and all other operating activities.

m) General administrative expenses

General administrative expenses contain all expenditure incurred in connection with the business operations of the companies included in the financial statements.

Staff expenses include wages and salaries, statutory social security contributions and fringe benefits, payments to pension funds and internal pension plans, as well as all expenses resulting from severance and pension payments.

Administrative expenses include expenses for office space, office supplies and communication, advertising, PR and promotional expenses, expenses for legal advice and other consultancy, training, IT expenses and the contribution to the deposit guarantee.

Depreciation, impairment and reversal of impairment of intangible and tangible assets - excluding impairment of goodwill - are also reported in this item.

n) Restructuring result

The restructuring result contains the allocations and releases of the restructuring provision.

o) Financial assets and liabilities

A financial asset or a financial liability is initially recognised in the balance sheet when the VBW Group becomes party to a contract on the financial instrument and thus acquires the right to receive, or assumes a legal obligation to pay, liquid funds. Financial assets and liabilities are recognised or derecognised on the trading day. The trading day is the date when the Group undertakes to buy or sell the assets concerned, respectively to issue or redeem the financial obligations.

The Group classifies its financial assets and liabilities using the following categories. Upon initial recognition, financial instruments must be measured at fair value. In case of financial instruments that are not measured at fair value through profit or loss directly attributable transaction costs that increase the fair value of financial assets or decrease it when a financial liability is established must also be included in the fair values as incidental acquisition costs. Pursuant to IFRS 13, the fair value is defined as the current exit value. This is the price that market participants receive or pay within the scope of an ordinary transaction for the sale of an asset or transfer of a liability. The fair value is either a price determined on an active market or is determined using valuation models. The input parameters relevant for the respective valuation model may either be directly observable in the market or, if not observable in the market, determined by expert estimate. During subsequent measurement, financial instruments are recognised in the balance sheet either at amortised cost or at fair value, depending on the respective category.

Financial liabilities

Financial liabilities are measured at amortised cost using the effective interest method, unless the option of measuring them at fair value through profit or loss (fair value option) is exercised. For first-time recognition, the option is exercised on a voluntary and irrevocable basis in the valuation category 'measured at fair value through profit or loss', if this enables any measurement or recognition inconsistency to be avoided or reduced significantly. Beyond that, financial liabilities may be designated as 'measured at fair value through profit or loss', if a group of financial liabilities or a group of financial assets and financial liabilities is controlled on the basis of their fair values and if their performance is measured on the basis of their fair values.

Derecognition and modification

Basically, a financial asset is derecognised on the date on which the contractual rights to its cash flows expire. The regulation for the derecognition of bad debts is described in note p) Loans and receivables credit institutions and customers. A financial liability is derecognised once it has been redeemed, i.e. when the liabilities agreed in the contract have either been settled, cancelled or expired.

The VBW Group conducts transactions in which financial assets are transferred, but the opportunities or risks incident to the ownership of the asset remain with the Group. If the Group retains all or substantially all opportunities and risks, the financial asset is not derecognised, but still reported in the balance sheet. Such transactions include, for example, securities lending and repurchase agreements.

A financial asset is deemed modified whenever its contractual cash flows are renegotiated or otherwise adjusted. Renegotiation or modification may result from market-driven commercial components or prevention due to a borrower in financial difficulties. Contract modifications may, but need not necessarily, lead to the derecognition of the old and recognition of the new financial instrument. To assess the economic substance and financial effect of such contract modifications, qualitative derecognition criteria such as change of debtor, change of currency, change of cash flow criterion and change of collateral were defined. A deviation of more than 10 % from the gross carrying amount of the asset immediately prior to adjustment, in relation to the present value of the modified cash flows (discounted using the effective interest rate before modification), was determined to be the quantitative criterion. Accordingly, a change in the present value of up to 10 % will not result in derecognition but must be shown separately in the result.

Offsetting

Financial assets and liabilities are set off and the net amount is presented in the balance sheet only if the Group has a legal right to set off the amounts and intends either to settle on a net basis or to realise the asset and settle the liability simultaneously.

Income and expenses are presented on a net basis only when permitted by the accounting standards or for gains and losses arising from a group of similar transactions, such as in the Group's trading activities.

Measured at amortised cost

Amortised cost of financial assets and liabilities is defined as the amount consisting of the original purchase price adjusted for account redemptions, the amortisation of premiums or discounts over the term of the instrument in accordance with the effective interest method and value adjustments or depreciation due to impairment or uncollectibility.

Measured at fair value through profit or loss

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

For the calculation of fair values, the following hierarchy is used and shows the meaning of the single parameters.

Level 1: Quoted prices in active markets of identical assets or liabilities. A market is regarded as active if quoted prices are readily and regularly available and represent actual and regularly occurring market transactions on an arm's length basis.

Level 2: Valuation techniques based on observable data – either directly as prices or indirectly derived from prices. Valuation techniques include using recent arm's length transactions between knowledgeable, willing parties, as well as reference to the current fair value of other instruments that are substantially the same. For discounted cash flow analyses and option pricing models all important parameters are derived either directly or indirectly from observable market data. All factors that market participants would consider in setting prices are taken into account and are consistent with accepted economic methodologies for pricing financial instruments. Inputs to valuation techniques reasonably represent market expectations and measures of the risk-return factors inherent in the financial instrument.

Level 3: Measurement methods that largely use parameters which are not observable on the market. These parameters have a significant impact on the calculation of fair value. This category also contains instruments which are measured by adjusting non-observable inputs, provided such adjustment is considerable.

The valuation methods are realigned periodically and checked for validity, using prices of current observable market transactions or prices based on available observable market data for the same financial instrument. The fair value measurement of the loans is still effected by way of a discounted cash flow method, discounting the cash flows calculated on the basis of forward rates with the risk-free interest curve including an additional charge. This additional charge was remodelled and now consists of risk costs, liquidity costs and a collective position for all pricing parameters (epsilon) not taken into account. The risk-free interest curve is derived from market data. The liquidity cost curve is modelled based on market data. The risk cost curve is deducted from the rating or the probability of default. The constant epsilon is calibrated in such a way that a transaction will not generate any fair value gain/loss at the time of conclusion.

Interest, dividends as well as related fee and commission income and expense of financial assets and liabilities in the investment book, which are measured at fair value through profit or loss, are shown in the respective positions in the income statement. Valuation gains and losses are shown separately in result from financial investments.

Impairment

There is a quarterly procedure for the evaluation of lending under which the organisational units responsible for risk are required to make a proposal for risk provisioning based on current developments. The impairment model is required to anticipate expected losses. Thus, not only losses that already occurred but also expected losses are recognised. In this context, a distinction is made as to whether or not the default risk of financial assets has deteriorated significantly ever since their initial recognition. If a significant deterioration has occurred, and if the default risk cannot be assessed as low as at the reporting date, all lifetime expected credit losses must be recognised with effect from that date. In case of significant deterioration and low default risk, only those losses expected for the lifetime of the financial instrument must be taken into account that result from future potential loss events within the next twelve months. Exceptions exist for trade receivables. For these assets, all expected losses must (receivables without any significant financing component) or may (receivables with a significant financing component and lease receivables) be taken into account already at the time of initial recognition.

Scope

The impairment model is meant to be applied to the following financial instruments:

- Financial assets measured at amortised cost
- Financial assets mandatorily measured at fair value through OCI
- Purchased or originated credit-impaired financial assets (POCI) with a change in the estimated loss amount since addition are reported in risk provisions using the credit risk-adjusted effective interest rate.
- Impairments are reported as provisions for irrevocable loan commitments and financial guarantees.

Impairments must not be separately shown for debt instruments and equity instruments measured at fair value through profit or loss, as any impairments are already considered in the fair value.

General approach

Except for purchased or originated credit-impaired financial assets, any expected losses must either be recognised on a 12-month ECL (expected credit loss) or the total-term ECL basis. This will depend on whether the credit risk for the financial instrument has increased significantly since initial recognition. Changes of the amount of the risk provision must be reported as an impairment or reversal of impairment in the income statement.

A significant increase in credit risk is primarily measured based on the change in lifetime probability of default (PD). If the change in lifetime PD exceeds a predefined threshold, the financial asset is classified as total-term ECL. Additionally, default of performance of at least 30 days, classification as forborne or the customer's transfer to intensive supervision are interpreted as a significant increase in credit risk.

Any objective evidence of impairment equals a downgrade of the customer's rating to the default rating category. This downgrade can basically be triggered by 13 defined default events. The definition of default within the Group corresponds to the requirements of CRR I Art. 178.

Options

- The option regarding the low credit risk exemption i.e. the lump sum allocation of low-risk instruments to stage 1 without any further examination of any significant increase in credit risk is exercised. The relevant instruments exclusively comprise receivables from customers and securities with an external investment grade rating. If several external ratings exist, the second best rating is used. In this way, it is guaranteed that at least two rating agencies provide the issuer with an investment grade rating.
- The option of a simplified procedure for trade receivables, contractual assets according to IFRS 15 and leasing receivables was not exercised, as such receivables either do not occur within the VBW Group at present or are insignificant.

Information regarding the calculation logic

Impairment is the expected loss defined as the present value of the difference of contractually agreed cash flows and expected cash flows.

The calculation logic may be described according to the following 6 dimensions:

- Time horizon: The expected losses are calculated either for a 12-month period or for the entire residual term.
- Individual transaction or portfolio perspective: The calculation of the impairment at individual transaction level usually takes place for customers at stage 3 with a certain minimum exposure (individual loan loss provisions and provisions for off-balance and other risks). For all other items, the calculation is carried out for each transaction individually. The parameters used (PD, LGD, etc.) are derived from portfolios/groups with the same risk characteristics (portfolio loan loss provisions and lump sum individual impairments/provisions for off-balance and other risks).
- Scenario analysis: The impairment is determined based on at least two probability-weighted scenarios.
- Expected cash flows: To determine the expected losses, there are requirements for estimating the expected cash flows (determination of collateral cash flows, cash flows from current operations, etc.).
- Time value of money: The expected loss includes the time value of money and accordingly constitutes a discounted value.
- Taking into account available information: For the purpose of calculating an impairment, debtor-specific, transaction-specific and macroeconomic information about past events, current conditions and forecasts are taken into account within the scope of the PD, LGD and cash flow models applied.

According to the instructions in the Group credit risk manual, customers with an internal rating of 4C to 4E (watchlist loans) and all other customers for which other indications show a risk of default, i.e. the contractual redemption is at risk, are examined more intensively. A corresponding risk provision is recognised for uncollateralised or partly collateralised exposures. For non-performing loans (rating category 5A - 5E), the appropriateness of the level of risk provisioning is examined.

Derivative financial instruments

Derivative financial instruments are measured at fair value through profit or loss.

For fair value calculation, credit value adjustments (CVA) and debt value adjustments (DVA) are taken into account. Counterparty risk for fair values arising from unsecured derivatives is taken into account by means of CVA or DVA - approximating the potential future loss relating to counterparty default risk. The expected future exposure (EFE) is calculated using the Monte Carlo simulation. As no observable credit risk spreads are available for these counterparties on the market, the probabilities of default for the counterparties are based on internal ratings of the Group.

Changes in the market value of derivative financial instruments which are used for a fair value hedge are immediately recognised in the income statement, under result from financial investments. The change in market value of the underlying transaction resulting from the hedged risk is also recognised under result from financial investments, regardless of its allocation to individual categories under IFRS 9. Fair value hedges are used to hedge interest rate risks and currency risks arising from fixed-income financial investments and liabilities, as well as foreign currency receivables and liabilities. At present, fair value hedges are only used to hedge interest rate risks within the Group.

In case of cash flow hedges, the change in fair value of the derivative is recognised immediately in the hedging reserve in OCI, taking into account deferred taxes. The ineffective part of the hedge is recognised in the income statement. The underlying transaction is measured depending on its allocation to the individual categories. Cash flow hedges are not used within the Group at present.

Embedded derivatives that are subject to separate reporting are measured regardless of the financial instrument in which they are embedded, unless the structured financial instrument is designated at fair value through profit or loss. In case of hybrid financial instruments containing embedded derivatives, the SPPI criterion must be verified based on the entire hybrid contract, without separating embedded derivatives from the underlying contract.

Own equity and debt instruments

Own equity instruments are measured at cost and deducted from equity on the liabilities side. Repurchased own issues are deducted from issues at their redemption amounts on the liability side of the balance sheet. The difference between redemption amount and acquisition cost is reported in the item Other operating result.

p) Loans and receivables credit institutions and customers

Loans to and receivables from credit institutions and customers are recognised on balance as soon as the Group becomes contracting party. Loans and receivables are initially recognised at fair value plus all directly attributable transaction costs. Subsequent measurement is performed at amortised cost, under the prerequisite that the SPPI criterion (cash flows of the financial instrument only consist of interest and redemption payments of the outstanding principal amount) is met. Interest income is calculated according to the effective interest method. If the SPPI criterion is not met, the financial instrument is measured at fair value through profit or loss.

In accordance with IFRS 9, the gross carrying amount of receivables is reduced if it cannot reasonably be expected to be realisable. Therefore, the decisive criterion for derecognition of receivables is their uncollectability. A receivable must be derecognised completely in any case if all prerequisites are fulfilled, no recoverable collaterals exist for the receivables concerned, no other assets of the debtor are known and if alternatively the debtor has not paid in spite of conviction and in spite of execution proceedings, the debtor is insolvent, unless there is any clear prospective quota or hopelessness of execution.

q) Risk provision

Individual loan loss provisions and portfolio loan loss provisions are effected for the special risks of banking business. Risk provisions for off-balance risks are reported under provisions.

The valuation models are based on statistically calculated parameters, such as historical default and loss ratios. The methods and parameters used are validated regularly in order to approximate the estimated and actual defaults and losses. The process for determining the impairment is computer-aided, using an impairment tool specifically developed for the purpose.

For further details please refer to note 3) o) Financial assets and liabilities, 3) p) Loans and receivables credit institutions and customers and 52) Risk report b) Credit risk.

r) Assets and liabilities held for trading

Assets held for trading include all financial assets with a view to short-term sale or forming part of a portfolio which is intended to yield short-term profit. Liabilities held for trading comprise all negative fair values of derivative financial instruments held for trading. No financial assets and liabilities measured at fair value through profit or loss are reported in this position.

Both initial recognition and subsequent measurement are effected at fair value through profit or loss. Transaction costs are expensed as incurred. All changes in fair value and all interest income, dividend payments and refinancing costs attributable to the trading portfolio are reported in net trading income.

s) Financial investments

Financial investments comprise all securitised debt and equity instruments not classified as participations. These are purely financial investments without any relevance to the core business of the VBW Group, where the optimi-sation of

returns is of primary importance. Financial investments are initially recognised at fair value plus incremental direct transaction costs.

Classification of securitised debt instruments

Securitised debt instruments are classified in three measurement categories: measured at amortised cost, measured at fair value through profit or loss, measured at fair value through OCI. Classification is performed based on the business model criterion on the one hand and on the SPPI-criterion on the other hand.

Measured at amortised cost

The group of financial investments measured at amortised cost comprises financial assets that only provide for the claim to interest and redemption payments at given points in time (SPPI-criterion) and are held within the scope of a business model for the purpose of holding assets. Valuation is effected at amortised cost, with interest income being calculated according to the effective interest method.

Measured at fair value through profit or loss

Financial investments that cannot be allocated to either the Hold to collect or Hold to collect and sell business model fall into the category measured at fair value through profit or loss. Moreover, financial investments with contractual terms (contractual cash flows) that do not only represent redemption and interest payments on the outstanding principal, and therefore risks or fluctuations being not immaterial, are also allocated to this category.

Measured at fair value through OCI

Financial investments are measured at fair value through OCI if the asset was allocated to the business model Hold to collect and sell and if the contractual features of the financial asset only provide for interest and redemption payments on the out-standing principals at predefined points in time (SPPI-criterion).

Classification of equity instruments

Equity instruments are measured at fair value through profit or loss. Upon initial recognition, however, an irrevocable option (OCI option) may be exercised, individually for each instrument. This option only applies to financial instruments that are not held for trading and do not constitute a conditional consideration, which are recognised by an acquirer within the scope of a business combination under IFRS 3. If the option is exercised, all changes to the fair value are reported in OCI (except for dividends, which are reported through profit or loss). Gains or losses reported in OCI can never be reclassified from equity to the income statement.

t) Investment property

All land and buildings, also those under construction, that meet the definition of investment property as set out in IAS 40 are reported at fair value. Annual measurement is essentially based on RICS standards (Royal Institution of Chartered Surveyors). Following IFRS 13, the RICS defines fair value as the estimated amount for which an investment property could be sold on the date of valuation by a willing seller to a willing buyer in an arm's-length transaction in normal business operations, wherein the parties had each acted knowledgeably, prudently and without coercion. These calculations are earnings calculations, most of which are prepared following the discounted cashflow method based on current rent lists and lease expiry profiles. They are subject to assumptions regarding market developments and interest rates. The returns used are defined by the appraiser and reflect the current market situation as well as the advantages and disadvantages of the specific property. Comparative value methods are used for undeveloped plots of land where development is not expected in the near future. Transaction prices for similar properties recently sold on the open market are taken as a basis. These sales prices are analysed using comparable properties and adjusted with regard to differences in size, layout, location or use.

The real estate portfolio is valued exclusively by external appraisers who are selected, among others, based on proven professional qualification and experience of the locations and categories of property being valued. In Austria, appraisals were obtained from IMMO-CONTRACT Maklerges.m.b.H. External appraisers are paid a fixed fee which does not depend on the appraised market value of the property.

Since parameters are used to measure investment property which are not based on market information, investment property is classified in Level 3 of the fair value hierarchy. The assumptions and parameters used in the valuation are updated on every valuation date.

Tenancy agreements are in place with commercial and private lessees; these vary owing to the diversity of the portfolio. These tenancy agreements generally have longer terms of up to 10 years and are secured with deposits. Adjustments to indexes in line with the market are taken into account. Rents are not linked to revenue. Purchase options have been granted for some properties.

Rental income is recognised on a straight-line basis in accordance with the term of the respective contracts and reported in the result from financial investments.

u) Participations and investments in companies measured at equity

This item includes subsidiaries and participations established or acquired for strategic reasons and as financial investments. Strategic investments are companies that cover the areas of business of the Group, as well as companies that support those areas of business. Subsidiaries are fully consolidated if they are material for the presentation of a true and fair view of the net assets, financial position and earnings situation of the Group.

Companies on which a material influence is exerted are measured according to the equity method. All other participations are reported at fair value, except if their acquisition costs are less than euro 50 thousand and the equity share does not exceed a carrying amount of euro 100 thousand. As these participations are not listed at a stock exchange and no market prices are available on an active market, the participations are measured by means of valuation methods and input factors some of which are not observable. Valuations are effected according to the discounted cash flow method and the peer group approach. Various calculation models are applied. The income approach is used if VBW controls the company or exercises any management function, and budgets are available accordingly. If the company is not controlled, the fair value calculation is performed based on the dividend paid as well as the annual results of the last five years. In case of companies whose object does not permit any regular income or the result of which is controlled by the parent company through settlements, the net assets are used as valuation criterion. In case of participations in co-operatives, the share capital is used as the fair value, provided the subscription of new shares and the cancellation of existing shares are possible at any time. If valuation reports are prepared by external valuators, they will be used for current valuation.

To the extent that the discounted cash flow method is applied, the discount rates used are based on the respective current recommendations of the Fachsenat der österreichischen Kammer der Wirtschaftstreuhänder as well as of international financial data service providers and, in the 2018 financial year, range between 6.9 and 8.9 % (2017: 6.9 to 8.9 %). The market risk premium used for the calculation is 7.3 % (2017: 6.75 %), the beta values used range between 0.8 - 1.1 (2017: 0.8 - 1.1). Additional country risks did not have to be considered. Discounts due to fungibility and exercise of control in the amount of 10 % in each case are effected for two participating interests.

Changes in value are reflected in the fair value reserve. If the reason for impairment ceases to exist, the reversal of impairment is made without any effect on profit or loss directly in equity, taking into account any deferred taxes.

For calculating the sensitivities for the fair value, the interest rate is basically set at +/-0.5 percentage points. The income components used for the calculation are taken into account at +/-10 % for the sensitivity calculation in each case. In case of participations where the fair value corresponds to net assets, this is taken into account at +/-10 % for information regarding sensitivity. For fair values derived from valuation reports, a lower and an upper range for sensitivity are recognised, respectively. If the fair value corresponds to the share capital, no sensitivity will be calculated.

v) Intangible and tangible assets

Intangible assets are carried at cost less straight-line amortisation and impairment. This item primarily comprises acquired goodwill, customer relationships and software.

Goodwill is not depreciated on a straight-line basis, but instead is tested for impairment at least once a year in accordance with IAS 36, or more frequently if events or changes in circumstances indicate that impairment may have occurred. Impairment testing is performed for the cash-generating units (CGUs) to which goodwill is allocated. Impairment requirements for CGUs are calculated by comparing carrying value with their realisable value. Where realisable value is less than the carrying value, the difference is recognised as an impairment expense. Impairment of goodwill may not be reversed. Tangible assets are carried at cost and depreciated on a straight-line basis over their estimated life in the case of depreciable assets.

Write-downs are recognised for permanent impairment. If the circumstances resulting in the recognition of a write-down cease to exist, the write-down is reversed up to a maximum of amortised cost.

The useful life is the period of time during which an asset is expected to be used and is calculated as follows:

Office furniture and equipment	up to 10 years
EDP hardware (including calculators, etc.)	up to 5 years
EDP software	up to 4 years
Vehicles	up to 5 years
Customer relationships	up to 20 years
Strongrooms and safes	up to 20 years
Buildings, reconstructed buildings	up to 50 years
Rental rights	up to the period of lease

w) Tax assets and liabilities

This item is used to report current and deferred tax assets and liabilities.

According to the balance sheet liability method set out in IAS 12, deferred taxes are derived from all temporary differences between the tax base of an asset or liability and its carrying amount in the balance sheet prepared in accordance with IFRS. Deferred taxes are calculated for subsidiaries based on the tax rates that apply or have been announced in the individual countries on the balance sheet date. Deferred tax assets are offset against deferred tax liabilities for each individual subsidiary.

Deferred tax assets in respect of unutilised tax loss carryforwards are recognised to the extent that it is probable that future taxable profit will be available at the same company against which the unused tax losses can be utilised or if sufficient taxable temporary differences exist. The appraisal period is up to four years. Deferred tax assets from tax loss carryforwards are impaired, if it is unlikely that the tax benefit can be realised. Deferred taxes are not discounted.

x) Other assets

Deferred items are used for accruing income and expenses and are shown in this item together with other assets. Value adjustments are recognised for impairment. This item also includes all positive fair values of derivatives that are reported

in the investment book and carried at fair value. With the exception of derivatives used in cash flow hedges, which are taken directly to other comprehensive income, changes in fair value are reported in result from financial investments.

y) Liabilities

The initial recognition of amounts owed to credit institutions and customers as well as debts evidenced by certificates is performed at fair value plus directly attributable transaction cost. Subsequent measurement is performed at amortised cost in accordance with the effective interest method, unless these liabilities were designated as liabilities at fair value through profit or loss. Financial liabilities for which the fair value option was chosen, gains and losses arising from a change in the company's own credit risk must be recognised in OCI. Any remaining valuation changes are shown in the income statement.

z) Employee benefits

Payments to defined contribution plans are expensed as incurred. Irregular payments are allocated to the respective reporting period.

VBW Group has made defined benefit commitments for individual staff members for the amounts of future benefits. These plans are partly unfunded, i.e. the funds required as cover are retained and the VBW Group recognises the necessary provisions. These plans are funded exclusively by the Group. Employees are not required to make contributions to the plans. In the VBW Group, staff pension entitlements reported as transferred assets - plan assets - were transferred to BONUS Pensionskasse Aktiengesellschaft. There are no extraordinary risks, risks specific to the company or plans, or significant risk concentrations.

The pension fund has established an asset risk management process for those pension obligations transferred to it.

At BONUS Pensionskasse Aktiengesellschaft, risk is measured at the level of an investment and risk association (Veranlagungs- und Risikogemeinschaft, VRG) using the value at risk (VaR), Tracking Error and shortfall risk (SFR) indicators. These quantify maximum loss probabilities under common market conditions. Scenario analyses are also performed taking rarely occurring extreme market movements into account. VaR, Tracking Error and SFR are the core indicators for managing risk at VRG level. A defined limit system forms the framework for investment.

The pension fund fulfils the requirements of the Austrian Financial Market Authority's (FMA) Risk Management Regulation (Risikomanagementverordnung) within its own sphere and reports regularly in this regard to various boards. On the liabilities side, the biometric risks in the VRG are regularly reviewed in order to identify long-term deviations from the basis of calculation in time. The same applies to the obligations that have not been transferred. As standard, the Strategic Asset Allocation (SAA) is checked for compatibility with risk-bearing capacity at least once a year or in shorter intervals if necessary. Within the scope of this SAA review, the investment structure is reconciled with the liabilities side, the portfolio information and the respective liquidity requirements. This review is performed by Risk Management in close collaboration with the investment team. The ranges of fluctuation resulting from fluctuations of the parameters included are calculated and monitored as part of sensitivity analyses in order to assess the impact of possible fluctuations on the assets side of the balance sheet in time.

In accordance with the projected unit credit method, provisions for pensions and severance payments are calculated based on generally recognised actuarial principles for determining the present value of the overall entitlement and additional claims acquired in the reporting period. For severance payments, this procedure takes into account retirement due to attainment of pensionable age, occupational incapacity, disability or death, as well as the vested rights of surviving dependents.

Actuarial gains and losses are recognised directly in other comprehensive income. Past service cost is recognised immediately through profit and loss when the plan is amended. All income and expenses connected with defined benefit plans are recognised under staff expenses.

Parameters for calculating employee benefit obligations

2018	2017	2016	2015
1.10 %	1.10 %	1.10 %	1.50 %
1.10 %	1.10 %	1.10 %	2.00 %
1.10 %	1.10 %	1.10 %	2.00 %
1.10 %	1.10 %	1.10 %	1.50 %
3.00 %	3.00 %	3.00 %	3.00 %
2.00 %	2.00 %	2.00 %	2.00 %
none	none	none	none
	1.10 % 1.10 % 1.10 % 1.10 % 3.00 % 2.00 %	1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 3.00 % 3.00 % 2.00 % 2.00 %	1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 1.10 % 3.00 % 3.00 % 2.00 % 2.00 %

The fundamental biometric actuarial assumptions of the latest Austrian scheme by Pagler&Pagler for calculating pension insurance for salaried employees are applied as the basis of calculation (AVÖ 2018 P - Rechnungsgrundlagen für die Pensionsversicherung – Pagler&Pagler, Angestelltenbestand).

The current retirement age limits are generally taken into account in these calculations. It is assumed that, as a rule, men will retire at the age of 65 years and women between the age of 60 and 65 years.

Pension obligations comprise claims of employees who were in active service for the Group on the valuation date as well as entitlements of pension recipients. These entitlements are defined in special agreements and in the Group's Articles of Association and represent legally binding and irrevocable claims.

aa) Other provisions

Other provisions are recognised if a past event has given rise to a present obligation and it is likely that meeting such an obligation will result in an outflow of resources. They are built to the amount of the most probable future claims, taking into account cost estimates of contractual partners, experienced data and financial mathematical methods. A contingent liability is reported if an eventual obligation exists and an outflow of resources does not appear probable or no reliable estimate of the amount of the obligation can be made. Risk provisions are discounted.

Risk provisions comprise loan loss provisions for contingent liabilities (in particular financial guarantees). Other provisions contain provisions for legal disputes and restructuring. Risk provisions allocated and released are recorded under risk provisions in the income statement. Amounts allocated to and released from the restructuring provision are included under restructuring result.

bb) Other liabilities

Deferred items are used for accruing income and expenses and are shown in this item together with other liabilities. This item also includes all negative market values of derivative financial instruments that are reported in the investment book and carried at fair value. With the exception of derivatives used in cash flow hedges, which are taken directly to other comprehensive income, changes in fair value are reported in result from financial investments.

cc) Subordinated liabilities

Subordinated capital is initially recognised at market value plus directly attributable transaction costs. It is subsequently measured at amortised cost using the effective interest method, unless these liabilities were designated as liabilities at fair value through profit or loss.

In case of bankruptcy or the winding up of the enterprise, all amounts accounted for as subordinated liabilities may be satisfied after having met the demands of all other non-subordinated creditors.

In addition to subordination, the contractual terms for supplementary capital contain a performance-based interest payment. Interest may only be paid insofar as this is covered by annual profit before changes in reserves of the company issuing the capital. Supplementary capital interests also participate in any loss. The repayment amount is lowered by current losses. Repayment at nominal value is only possible if the proven losses are covered by profits.

dd) Equity

Financial instruments issued which do not involve a contractual obligation to transfer cash or another financial asset to another entity or to exchange financial assets or liabilities with another entity under conditions that are potentially unfavourable to the issuer are reported in equity.

ee) Capital reserves

In accordance with IAS 32, the transaction costs of an equity transaction are accounted for as a deduction from equity, taking into account deferred taxes, to the extent that they constitute incremental cost that are directly attributable to the equity transaction. Furthermore, the difference between face value and repurchase value of own shares, as far as it is covered in capital reserves, is shown there. If the difference exceeds capital reserves, this amount is deducted from retained earnings.

ff) Retained earnings

All legal and statutory reserves as well as other reserves, provisions against a specific liability as defined by section 57 (5) of the Austrian Banking Act, untaxed reserves and all other undistributed profits are reported in retained earnings.

gg) Own funds

The company is subject to external capital requirements based on the European Union's CRD IV and CRR (Basel III). The rules on capital ratios specified there constitute the central management variable in the Group. These ratios reflect the relationship between regulatory own funds and credit, market and operational risk. Accordingly, the risk/return management of the Group is based on the capital allocated to one business or, ultimately, one organisational unit and the income to be generated from this, taking into account the corresponding risk considerations.

Credit risk is determined by multiplying on-balance-sheet and off-balance-sheet exposures based on their relative risks by the risk weighting to be allocated to a counterparty. The procedures for determining risk-relevant parameters (exposure, risk weighting) are based on percentages specified by regulatory requirements (standard approach). There is also an equity capital requirement for credit valuation adjustments in derivatives transactions. This is derived from regulatory requirements and, in particular, reflects the counterparty risk in the derivatives transaction. The market risk component of the Group is also calculated using the standard approach. The capital requirements for operational risk are calculated by multiplying the revenues by the respective percentages for the divisions.

Regulatory own funds can be broken down into three elements:

- Common equity tier I (CET1)
- Additional tier I (AT1)
- Supplementary capital or tier II capital (T2)

The first two components comprise the tier I capital.

CET1 comprises the equity and participation capital that meets the CRR requirements. These are as follows: classification as equity with separate disclosure in the accounts, perpetual, fully loss-bearing, no reduction in the principal amount except in the case of liquidation or repayment without particular incentive mechanisms, no obligation to make distributions, distributions not linked to the nominal price. Transition arrangements apply for existing participation capital that does not fulfil the CET1 criteria. In the period until 2021, this capital will be applied at a rate reduced by ten percentage points each year. From 2022, this capital will no longer be eligible at all. CET1 also includes capital reserves, retained earnings, other reserves and non-controlling interests used to meet the regulatory capital requirement. Intangible assets and goodwill, deferred tax assets and interests in other credit institutions constitute significant deductions.

T2 also includes non-current subordinated liabilities.

The minimum equity ratio (total of tier I and tier II) is 8 %. Minimum core capital requirements are 4.5 % for CET1 and 6.0 % for tier I. The VBW Group complied with these relevant supervisory requirements throughout the entire reporting period and its own funds exceeded the minimum requirements.

Apart from the minimum capital requirements pursuant to Article 92 (1) of Regulation (EU) No. 575/2013 of the European Parliament and of the Council, the combined capital buffer requirements as defined in Article 128 (6) of Directive 2013/36/EU, as well as the Pillar 2 capital demands and recommendations from the Supervisory Review and Evaluation Process (SREP) must be taken into account for the Association of Volksbanks. Further explanations regarding the mentioned capital and buffer requirements are contained in Note 52) Risk report.

hh) Trust transaction

Transactions in which an affiliate of the Group acts as a trustee or in any other trusteeship function and thus manages or places assets on a third-party account are not shown in the balance sheet. Commission payments from such transactions are reported in net fee and commission income.

ii) Repurchase transactions

Under genuine repurchase agreements, the Group sells assets to a contractual partner and simultaneously undertakes to repurchase these assets at the agreed price on a predefined date. The assets remain in the consolidated balance sheet as no risk or rewards are transferred and are measured in accordance with the rules applying to the respective balance sheet items. At the same time, the received payment is recognised as a liability.

jj) Contingent liabilities

Possible obligations for which an outflow of resources does not appear probable or no reliable estimate of the amount of the obligation can be made, are reported under contingent liabilities. Provisions are recognised for acceptances and endorsements as part of provisions for risks if there are likely to be future claims.

Obligations arising from financial guarantees are recognised as soon as the Group becomes a contracting party, i.e. when the guarantee offer is accepted. Initial measurement is performed at fair value. Generally the fair value corresponds to the value of the premium agreed.

Guaranteed amounts of members in the case of participations in cooperatives are reported under other contingent liabilities. A follow-up check is regularly performed in order to determine whether on-balance sheet recognition in the consolidated financial statements is necessary.

kk) Cash flow statement

The cash flow statement is calculated in accordance with the indirect method. Here, the net cash flow from operating activities is calculated based on the annual result after taxes and before non-controlling interest, whereby non-cash expenses and income during the business year are included and deducted respectively first of all. Moreover, all expenses and income which did serve as cash, but were not allocated to operating activities, are eliminated. These payments are recognised under the cash flow from investing activities or financing activities. The interest, dividend and tax payments, which are stated separately, are solely from operating activities.

Cash flows from non-current assets such as securities measured at amortised cost, participations and intangible and tangible assets are assigned to the cash flow from investing activities. The cash flow from financing activities includes all cash flows of the owners as well as changes to subordinated liabilities and non-controlling interest. Liquid funds have been defined as cash and cash equivalents and comprise balances with central banks as well as cash in hand. These balances are composed of the minimum reserve to be held according to statutory provisions and current investments with various central banks.

4) Net interest income

Euro thousand	2018	2017
Interest and similar income from	200,313	187,594
Credit and money market transactions with credit institutions	10,725	8,517
Credit and money market transactions with customers	134,281	123,851
Fixed-income securities	42,422	44,321

Financial liabilities measured at fair value through profit or loss - designated	-3,118	0
Derivative instruments	-31,318	-24,476
Valuation result - modification	-58	0
Net interest income	124,728	120,722

Due to the trend of money market interest rates towards negative reference rates, interest income of euro 8,900 thousand (2017: euro 7,151 thousand) and interest expenses of euro -9,658 thousand (2017: euro -8,167 thousand) were realised in the 2018 business year. Negative interest income is reported in interest expenses and negative interest expenses are reported in interest income, so that all results from negative interest rates are shown gross.

The main reason for the negative interest rates is the reduction in the ECB's deposit rate (penalty rate), the negative effect of which is euro -7,202 thousand (2017: euro -5,901 thousand).

Interest and similar income from financial assets measured at amortised cost and measured at fair value through OCI are calculated by using the effective interest rate method.

Current income from equities and other variable-yield securities as well as from other affiliates and investments in other companies in the amount of euro 3,304 thousand and rental income investment property in the amount of euro 3,200 thousand, which were reported under interest and similar income in the previous year are now reported in result from financial investments.

5) Risk provision

Euro thousand	2018
Changes in risk provision	-465

Rental income from investment property and operating lease	3,024	3,200
Result from financial investments	9,172	-954

9) Other operating result

Euro thousand	2018	2017
Other operating income	116,912	94,257
Other operating expenses	-14,425	-18,538
Taxes and levies on banking business	-2,321	-2,251
Impairment of goodwill	0	-8,262
Other operating result	100,166	65,206

Other operating income includes income from cost allocations, essentially to the Association of Volksbanks, in the amount of euro 96,508 thousand (2017: euro 73,390 thousand). Furthermore, the acquisition of VB Horn generated profit in the amount of euro 8,319 thousand (2017: Sparda in the amount of euro 18,227 thousand). A contribution from the community fund generated an income in the amount of euro 10,000 thousand. Additionally, other operating income includes income from the sale of intangible and tangible assets in the amount of euro 1,308 thousand (2017: euro 1,317 thousand).

Other operating expenses include costs of external companies in the amount of euro -13,130 thousand (2017: euro -14,737 thousand). These costs are essentially allocated to members of the Association of Volksbanks. A provision in the amount of euro -2,543 thousand was made for interest claims arising from corporate loans with floors. In the previous year operating expenses included an amount of euro -1,425 thousand for repayment of negative interest. An expense of euro -626 thousand (2017: euro -698 thousand) was generated by the sale of inta assets. Early redemptions of issues generated a result of euro -798 thousand in the 2017 business year.

Other taxes include the bank levy in the amount of euro -1,860 thousand (2017: euro -1,938 thousand).

The goodwill from the contributions of banking operations was depreciated by euro -8,262 thousand in the 2017 business year.

10) General administrative expenses

Euro thousand	2018	2017
Staff expenses	-115,314	-112,140
Wages and salaries	-86,211	-80,632
Expenses for statutory social security	-22,813	-21,848
Fringe benefits	-1,297	-1,339
Expenses for retirement benefits	-3,001	-1,689
Allocation to provision for severance payments and pension funds	-1,993	-6,631
Administrative expenses	-99,759	-82,917
Office space expenses	-9,835	-10,456
Office supplies and communication expenses	-748	-964
Advertising, PR and promotional expenses	-4,050	-2,984
Legal, advisory and consulting expenses	-28,371	-19,466
IT expenses	-42,807	-33,828
Contribution to the deposit guarantee	-3,653	-2,476
Sundry administrative expenses (including training expenses for staff)	-10,295	-12,743
Depreciation and reversal of impairment	-7,185	-9,819
Depreciation	-8,358	-8,422
Impairment/reversal of impairment	1,173	-1,398
General administrative expenses	-222,258	-204,876

Staff expenses include payments for defined contribution plans totalling euro 2,658 thousand (2017: euro 2,537 thousand).

Other administrative expenses include expenses for managing contracts for investment properties to the amount of euro 76 thousand (2017: euro 87 thousand).

For the business year, expenses for the auditor KPMG Austria GmbH Wirtschaftsprüfung und Steuerberatungsgesell-schaft amounted to euro 2,138 thousand (2017: euro 1,855 thousand). Thereof euro 1,526 thousand (2017: euro 1,368 thousand) fall upon the audit of the annual financial statements, consolidated financial statements and annual financial statements of the Association of Volksbanks, as well as of financial statements of individual affiliates and joint ventures included in the consolidated financial statements, euro 484 thousand (2017: euro 404 thousand) to other certifications, euro 15 thousand (2017: euro 0 thousand) to tax advice and euro 113 thousand (2017: euro 84 thousand) to other services.

Information on compensation to board members

Euro thousand	2018	2017
Total compensation	2,924	2,547
Supervisory Board	292	193
Managing Board	2,061	1,942
Former board members and their surviving dependents	571	412
Expenses for severance payments and pensions		
Managing Board	761	552
Thereof defined contribution plans	182	130

Members of the Managing Board do not receive performance or results-based pay. The total compensation of Managing Board members consists of a fixed basic salary and other compensation (e.g. in-kind benefits). There is no stock-option or share-transfer scheme for members of the Managing Board.

Principles and prerequisites of the pension scheme

The pension scheme is a defined-contribution scheme for all members of the Managing Board. The collective pension-fund bargaining agreement for commercial credit cooperatives has been applied to members of the Managing Board. All members of the VBW Managing Board who have a valid contract and a mandate to serve on the Board are eligible to join the scheme.

Principles governing pension entitlements and claims of members of the Managing Board at termination of the function

The statutory severance payment conditions under section 23 Employees Act (Angestelltengesetz) apply to one Managing Board member, other members of the Managing Board are subject to the new severance payment system ("Abfertigung Neu"). There is also a D&O insurance policy (directors' and officers' insurance).

Number of staff employed

	Average number of staff		Number of staff at end of period	
	2018	2017	31 Dec 2018	31 Dec 2017
Employees	1,292	1,273	1,282	1,319
Workers	7	11	8	8
Total number of staff	1,299	1,284	1,290	1,327

All staff is domestic.

11) Restructuring result

Due to the Adler programme which started in the 4th quarter of 2018 and is meant to increase efficiency and reduce costs in subsequent years, provisions had to be recognised for the reorganisations to be effected in the sphere of Human Resources (HR) and branches. In the previous year, restructuring provisions in the HR sphere were released.

12) Income taxes

Euro thousand	31 Dec 2018	31 Dec 2017
Current income taxes	-2,320	-1,074
Deferred income taxes	1,661	6,705
Income taxes for the current fiscal year	-659	5,631
Income taxes from previous periods continued operation	-809	-1,005
Income taxes from previous periods	-809	-1,005
Income taxes	-1,468	4,626

The reconciliation below shows the relationship between the imputed and reported tax expenditure

Euro thousand	31 Dec 2018	31 Dec 2017
Annual result before taxes - continued operation	71,959	49,356
Annual result before taxes - total	71,959	49,356
Imputed income tax 25 %	17,990	12,339
Tax relief resulting from		
Tax-exempt investment income	-1,705	-2,011
Investment allowances	287	0
Non-tax deductible impairment of goodwill	0	2,066
Measurement of participation	1,128	-3,903
Non-taxable valuation results	-2,080	-4,389
Re-inclusion of deferred tax assets	-16,073	-9,551
Other differences	1,111	-181
Income taxes for the current fiscal year	659	-5,631
Income taxes from previous periods	809	1,005
Reported income taxes	1,468	-4,626
Effective tax rate - continued operations	2,04 %	-9,37 %

The effective tax rates differ significantly from the statutory tax rate in Austria due to the offsetting of deferred tax assets, particularly with regard to tax loss carryforwards.

Euro thousand	31 Dec 2018	31 Dec 2017
Liquid funds	1,565,504	1,813,951

Due to contractual obligations within the Association of Volksbanks, cash and cash equivalents are subject to restrictions. Mentioned cash and cash equivalents are allocated to a trust fund (Leistungsfonds) which serves the purpose of performing the services within the scope of joint liability scheme under the association agreement. This trust fund was set up in the 2016 financial year. In doing so, a target allocation amount was determined that must be achieved over a period of five years. VBW as CO manages this fund on trust. The amount reported corresponds to the share of VBW in the trust fund.

Carrying amount 31 Dec 2018	32,329

The valuations shown in the table above are included within result from financial investments. These valuations include holdings of investment property assets in the amount of euro 636 thousand (2017: euro 262 thousand) at the reporting date. Furthermore, other operating expenses include repairs and maintenance expenses for investment properties in the amount of euro 76 thousand (2017: euro 112 thousand).

In 2018, investment properties with a carrying amount of euro 7,710 thousand (2017: euro 2,450 thousand) was disposed of.

Investment properties contain 12 completed properties (2017: 9) with a carrying amount of euro 19,684 thousand (2017: euro 15,958 thousand), as well as undeveloped land with a carrying amount of euro 12,645 thousand (2017: euro 14,806 thousand). These properties are located in Austria. At reporting date, the investment properties are measured at fair value.

The valuation of investment properties uses parameters which are not based on market data. Investment properties are therefore classified in the level 3 fair value category.

The non-observable input factors are provided by independent external experts and reflect the current market assessment taking into account the specific features of each property. The main input parameters are shown below, with a distinction made between finished properties and undeveloped real estate. The minimum and maximum values are reported for each individual input parameter along with the average value weighted by the carrying amount (average). The average value in the position carrying amount corresponds to the average value of each property. The parameter values therefore do not generally relate to one and the same property.

Associates

VBW holds shares in the following associated companies. Volksbank Kärnten eGen (VB Kärnten) and VB Verbund-Beteiligung eG (VB Bet).

VBW holds a 25.26 % (2017: 25.21 %) share in VB Kärnten with registered office in Klagenfurt. The company's main business purpose consists of banking operations and bank-related brokering and services.

VBW holds a 29.04 % (2017: 21.85 %) share in VB Bet with registered office in Vienna. The main business of the company is holding of participations within the Association of Volksbanks. In the business year VBW acquired an additional share of 7.17 % of the nominal amount. The fair value attributable to VB Bet's net assets exceeded its acquisition costs by euro 3,605 thousand. This income together with the current valuation is shown within the result from companies measured at equity.

None of the companies are listed on the stock exchange.

In the following, the financial information is presented for all companies in aggregated form as none of the companies are deemed material in terms of the proportion of the financial information relevant to VBW reporting.

In the reconciliation, the proportionate equity is reconciled with the carrying amount. As the other companies are aggregated, it is not possible to state the shareholding. The line valuations previous years includes the fair value measurement of the contribution of the CO business unit.

According to the statutory provisions of the Cooperative Societies Act (GenG), VBW only receives its original capital contribution back if it terminates its share in VB Kärnten or VB Bet (not in the event of liquidation or sale). Any dividends of VB Kärnten or VB Bet are limited in the sense that the supervisory regulations must be followed and the equity capital may not fall below a certain amount.

20) Participations

Deferred taxes before netting	162,342	106,250	158,096	113,331	11,326	1,661	430
Offset between deferred tax assets							
and deferred tax liabilities	-105,165	-105,165	-112,180	-112,180	0	0	0
Reported deferred taxes	57,177	1,085	45,917	1,151	11,326	1,661	430

The remainder of the net difference in the annual comparison that is not reflected in either the income statement or other comprehensive income is primarily attributable to the adjustment to IFRS 9 in the amount of euro 8,941 thousand as well as the changes in the scope of consolidation.

Deferred tax assets and deferred tax liabilities can only be offset to the extent that they relate to the same company.

For verification of the usability of tax loss carryforwards and the impairment of other deferred taxes a period up to 4 years was taken as a basis according to the Group's tax planning.

In accordance with IAS 12, no deferred tax liabilities for temporary differences relating to investments in subsidiaries with an amount of euro 11,709 thousand (2017: euro 13,002 thousand) and no deferred tax assets with an amount of euro -7,991 thousand (2017: euro -3,601 thousand) were recognised, as they are not expected to reverse in the forseeable future.

For tax loss carryforwards in the amount of euro 203,542 thousand (2017: euro 267,734 thousand) no deferred taxes were recognised. In the 2018 and 2017 business years, no deferred tax assets for tax loss carryforwards and other deferred tax assets (tax base) were impaired. Deferred tax assets were recognised only if their realisation appeared to be

probable within an adequate period of time (4 years). Of these tax loss carryforwards, euro 203,542 thousand (2017: euro 267,734 thousand) can be carried forward without restriction and especially concern VBW itself.

24) Other assets

Euro thousand	31 Dec 2018	31 Dec 2017
Deferred items	943	710
Other receivables and assets	26,401	24,692
Positive fair values of derivative instruments	86,831	98,575
Other assets	114,175	123,977

Other receivables and assets essentially consist of open outgoing invoices and deferrals in the amount of euro 12,836 thousand (2017: euro 13,397 thousand), property sales in the amount of euro 4,152 thousand (2017: euro 4,090 thousand), auxiliary accounts of the banking business in the amount of euro 3,837 thousand (2017: euro 318 thousand).

The table below shows the fair values of derivatives included in the position other assets which are used in hedge accounting.

	31 Dec 2018	31 Dec 2017
	Fair value	Fair value
Euro thousand	hedge	hedge
Interest rate related transactions	37,154	69,144
Positive fair values of derivative instruments	37,154	69,144

25) Assets held for sale

This position includes all assets held for sale in accordance with IFRS 5. The amount consists of the following:

Euro thousand	31 Dec 2018	31 Dec 2017
Investment property	79	0
Tangible assets	57,803	2,319
Other assets	97	118
Assets held for sale	57,979	2,437

Apart from real estate which is no longer used for operational purposes, this position includes the carrying amount of the head office in 1090 Vienna, Kolingasse.

26) Amounts owed to credit institutions

Euro thousand	31 Dec 2018	31 Dec 2017

As at 31 Dec 2018	15,409

The other provisions item provides for liabilities that are likely to lead to an outflow of funds in the future. The restructuring provision fulfils the criteria given under IAS 37.10 and totalled euro 6,494 thousand (2017: euro 6,128 thousand) as at the reporting date. Other long-term provisions were made for interest claims in connection with corporate loans with floors in the amount of euro 4,629 thousand (2017: euro 1,000 thousand) and pending litigations amounting to euro 2,231 thousand (2017: euro 8,018 thousand).

Provisions are recorded at the best possible estimate of the expected outflow of resources with economic benefits as at the balance sheet date, taking into account the risks and uncertainties expected in order to fulfil the obligation. Risks and uncertainties have been taken into account in making the estimates.

31) Long-term employee provisions

		Provision for	Provision for	
	Provision	severance	anniversary

The column Plan assets - quoted shows all plan assets that have a market price that is quoted on an active market.

Sensitivity analysis

With all other variables held constant, possible changes that could reasonably be expected in one of the significant actuarial assumptions as of the reporting date would have influenced the defined benefit obligation as follows.

	Change in the pro	esent value
	increase of	decrease of
Euro thousand	assumption	assumption
31 Dec 2017		
Discount rate (0.75 % modification)	-4,737	5,511
Future wage and salary increases (0.50 % modification)	3,317	-3,055
Future pension increase (0.25 % modification)	277	-266
Future mortality (1 year modification)	676	-650
31 Dec 2018		
Discount rate (0.75 % modification)	-4,671	5,353
Future wage and salary increases (0.50 % modification)	2,941	-2,718
Future pension increase (0.25 % modification)	281	-269
Future mortality (1 year modification)	708	-684

As of 31 December 2018, the weighted average term of defined-benefit obligations for pensions was 10.3 years (2017: 10.6 years) and for severance payment 13.0 years (2017: 12.4 years).

Although the analysis does not take into account the full distribution of cash flows expected based on the plan, it does provide an approximate value for the sensitivity of the assumptions presented.

32) Other liabilities

Euro thousand	31 Dec 2018	31 Dec 2017
Deferred items	76	391
Other liabilities	57,126	49,273
Negative fair values of derivative instruments	383,473	378,484
Other liabilities	440,676	428,148

Other liabilities essentially consist of deferrals in the amount of euro 20,837 thousand (2017: euro 34,163 thousand), incoming invoices in the amount of euro 13,158 thousand (2017: euro 6 thousand) as well as taxes and fiscal liabilities in the amount of euro 10,336 thousand (2017: euro 5,504 thousand).

The table below shows the negative fair values of derivatives included in position other liabilities which are used in hedge accounting.

	31 Dec 2018 Fair value	
Euro thousand	hedge	hedge
Exchange rate related transactions	19,613	20,273
Interest rate related transactions	271,550	277,803

Cash flows for contingent liabilities are displayed in note 44) Contingent liabilities and credit risks.

35) Equity

As at 31 December 2018, the subscribed capital of VBW before deduction of treasury stocks amounted to euro 137,547 thousand. It consists of registered shares as follows:

		Euro thousand
1,467,163	No-par value shares	137,547

By way of an agreement on a transfer and contribution in kind dated 24 April 2018 Waldviertler Volksbank Horn registrierte Genossenschaft mit beschränkter Haftung contributed its undertaking, the Horn banking operation, as contribution in kind against the granting of 49,629 new no-par value shares with a value of 4,653 thousand. Registration in the Commercial Register was effected on 20 June 2018.

Changes in subscribed capital

Number of units	Shares
Shares and participation certificates outstanding as at 1 Jan 2017	1,354,001
Contribution Sparda	12,643
Capital Increase	50,890
Shares and participation certificates outstanding as at 31 Dec 2017	1,417,534
Contribution VB Horn	49,629
Shares and participation certificates outstanding as at 31 Dec 2018	1,467,163

Dividend payment

Euro thousand	2018	2017
Dividend voting equity	8,310	0
Dividend non-voting equity	681	13,395
Total	8,991	13,395

The dividend payment includes the distribution to the federal government from the participation right in RZG in the amount of euro 681 thousand (2017: euro 13,395 thousand). Further details regarding the participation right of the federal government are described in note 2).

Return on capital employed

The return on capital employed for the business year was 0.61 % (2017: 0.51 %) and was calculated as the ratio of the result after taxes to total assets as at the reporting date.

In accordance with IFRS reporting, the scope of consolidation differs from the scope of consolidation under CRR as the IFRS provides for the inclusion of other entities not belonging to the financial sector. According to CRR, companies in the financial sector that are under the control of the parent or where the Group holds a majority of shares either direct or indirect, are fully consolidated. The carrying amount of institutions, financial institutions and subsidiaries providing bank-

ing-related auxiliary services that are controlled by the parent but that are not significant for the presentation of the group of credit institutions according to section 19 (1) of CRR is deducted from own funds. Subsidiaries which are managed jointly with non-Group companies are proportionately consolidated. Investments in companies in the financial sector with a share of between 10 % and 50 % that are not jointly managed are also deducted from own funds unless they are voluntarily consolidated on a pro rata basis. Investments in companies in the financial sector of less than 10 % are deducted from own funds considering the eligibility according to section 46 CRR. All other participating interests are included in the assessment base at their carrying amounts.

All credit institutions under control or where the Group holds a majority of shares either direct or indirect are considered in the scope of consolidation according to CRR.

In the 2018 business year, no substantial, practical or legal obstacles existed which would have prevented the transfer of equity or the repayment of liabilities between the parent institution and institutions subordinated to the former.

37) Financial assets and liabilities

The table below shows financial assets and liabilities in accordance with their individual categories and their fair values.

			Fair value	Carrying	
	Amortised	Fair value	through	amount

Please refer to note 3) u) Participations and investments in companies measured at equity and companies measured at equity for a description of the valuation procedures used for participations. Participations in the amount of euro 46 thousand (2017: euro 60 thousand) were measured at amortised cost due to their insignificance.

When determining market values for level 2 financial investments, VBW only uses prices based on observable market data. If systems deliver price information for inactive traded positions, this is checked based on secondary market data such as transactions in comparable products performed on active markets. The system prices are then adjusted accordingly if necessary. The main level 2 input factors are interest rates including associated interest rate volatilities, foreign exchange swap points, exchange rates, share prices, index rates, including related volatilities and credit spreads obtained from brokers on a daily basis. Market valuation adjustments are made through linear interpolations of the directly obtained broker data. The input factors used undergo daily quality assurance and are archived in the valuation system.

In 2018, financial instruments with a carrying amount of euro 1,186 thousand (2017: euro 6,071 thousand), which were still measured at Level 2 market value as at 31 December 2017, were reclassified as Level 1 financial instruments due to an increase in trading activity. In 2018 as well as 2017 no reclassifications from Level 1 into Level 2 were made.

The valuations shown in the table above are included in the item result from financial investments (income statement) or fair value reserve (other comprehensive income). The valuations recorded in the income statement include holdings of financial assets and liabilities to the amount of euro -5,795 thousand (2017: euro -669 thousand) at the reporting date.

The value of loans and receivables is assessed by discounting the cash flows of these loans using the risk-free swap curve plus markup. The markups used for discounting are the standard risk costs and the liquidity costs. The liquidity costs are derived from the market (spreads of senior unsecured bank issues in Austria and Germany; spreads of covered bonds for loans in the coverage fund and loans eligible for credit claims). The standard risk costs are used after clustering of the loans according to rating. The remaining components of the preliminary calculation are summarised in one factor (epsilon factor) upon conclusion of the deal and frozen for subsequent measurement.

As at 31 December 2018 financial investments include participation certificates with a carrying amount of euro 30,687 thousand (2017: euro 30,481 thousand) which are allocated to level 3 of the fair value hierarchy. They are not traded on any active market and only allow for alternative measurement by means of unobservable input parameters.

Measurement is effected using the Hull-White one factor model within the scope of a Monte Carlo simulation, with the model being calibrated to the current environment of market data (interest rate and volatility) on a daily basis. The interest to be paid on these shares in the future is calculated by means of a variable coupon, consisting of the 3-month EU-RIBOR as base rate and a markup that constitutes an unobservable input. Other unobservable input factors included in the valuation are the duration and the expected redemption rate of the participation certificates.

End of December 2020 is assumed as the estimated final maturity. The extended redemption period results from the Managing Board's assessment that a redemption by the Volksbanks of the participation capital held by VB Regio as an asset is subject to approval by the ECB. Only after such approval will VB Regio be able to redeem its own participation certificates. Moreover, a valuation report is required for the redemption of participation certificates in each case.

Based on the liquidity base of the issuer, a redemption rate of 100 is assumed. This assumption is supported by the asset impairment test performed. Discounting of cash flows is effected using a 3-month EURIBOR base rate plus markup reflecting the cost of capital.

The following table shows the changes of the fair value after adjustment of these input factors

31 Dec 2018	Positive change	Negative change
Euro thousand	in fair value	in fair value
Change in maturity + 1 year	0	-1,361
Change in markup +/- 100 bp	612	-601
Change in redemption - 5 %	0	-1,502
31 Dec 2017	Positive change	Negative change
Euro thousand	in fair value	in fair value
Change in maturity + 1 year	0	-1,375
Change in markup +/- 100 bp	621	-607
Change in redemption - 5 %	0	-1,485

Apart from measurement parameters and the static master data (derived from the payment profile as shown in the prospectus) that can be derived from the market, only funding premiums for covered bonds are used in the calculation of fair values for issues. Therefore, only these input parameters are subjected to a scenario analysis. For this purpose, the funding curve is subjected to a shift of 0.30 %. Such a shift is considered realistic by the relevant experts at VBW.

The following table shows the change of the fair value after adjustment of the input factors described above

31 Dec 2018	Positive change	Negative change
Euro thousand	in fair value	in fair value
Change in markup +/- 30 bp	2,711	-2,632

Please refer to note 14) Loans and receivables credit institutions and customers for further details regarding the sensitivity analysis regarding the fair values of loans from and receivables to credit institutions and customers.

The sensitivity analysis regarding the fair values of investment properties (IAS 40) are shown in note 18) Investment property.

The sensitivity analysis regarding the fair values of participations are shown in note 20) Participations.

The fair value of financial instruments which are not measured at fair value is calculated solely for disclosure purposes within the notes. Therefore, it has no influence on the consolidated balance sheet or the consolidated statement of comprehensive income.

The following table assigns all financial assets and liabilities not measured at fair value to various fair value hierarchies

For financial instruments that are largely short-term in nature, the carrying amount is an adequate estimate of fair value.

For long-term financial instruments, fair value is calculated by discounting contractual cash flows. In the case of assets, interest rates are used that could have been obtained for assets with similar residual durations and default risks (especially estimated defaults for lending receivables). For liabilities, the interest rates used are those with which corresponding liabilities with similar residual durations could have been assumed or issued as at the reporting date.

Fair value hierarchy

Financial instruments recognised at fair value are assigned to the three IFRS fair value hierarchy categories.

Level 1 – Financial instruments measured at quoted prices in active markets, whose fair value can be derived directly from prices on active, liquid markets and where the financial instrument observed on the market is representative of the financial instrument owned by the Group that requires measurement.

Level 2 – Financial instruments measured using procedures based on observable market data, whose fair value can be determined using similar financial instruments traded on active markets or using procedures whose inputs are observable.

Level 3 – Financial instruments measured using procedures based on unobservable parameters, whose fair value cannot be determined using data observable on the market. Financial instruments in this category have a value component that is not observable and which has a significant influence on fair value.

All derivative financial instruments – except for futures – are OTC products.

39) Hedging

Fair value hedges of interest rate risk

As at 1 January 2018, IFRS 9 was applied to hedge accounting within the VBW Group. The strict 80 % - 125 % hedge effectiveness requirement has been removed by IFRS 9, yet it is still applied within the VBW Group in order to detect any

potential ineffectiveness and restore effectiveness by means of rebalancing a hedging relationship in time. The effectiveness is measured with the dollar offset method on a monthly basis, which compares the fair value changes in the hedged as well as in the hedging instrument. Also, as part of the IFRS 9 project, measuring the hedge effectiveness was insourced in the financial year 2018.

Micro hedges valid under IAS 39, were continued under IFRS 9. Only in case of a few selected own issues, the fair value option was applied under IFRS 9 and the hedging relationship discontinued as at 1 January 2018. No other hedging relationships were discontinued in the financial year 2018. Also, IFRS 9 allows hedging credit portfolios by means of layer hedging, where a pre-defined layer of a credit portfolio is designated as a hedged instrument in a hedging relationship.

As at 31 December 2018, VBW held the following interest rate swaps as well as cross currency interest rate swaps as hedging instruments in fair value hedges of interest risk

31 Dec 2018					
Euro thousand	Up to	Up to	Up to	More than

31 Dec 2017	Interest rate risk	Foreign exchange risk
Financial assets	1,108,721	0
Financial liabilities	385,986	0

Since cross currency interest rate swaps were also used for hedging the interest rate risk in the previous year, the information regarding the previous year was adjusted accordingly.

40) Assets and liabilities denominated in foreign currencies

At balance sheet date, assets denominated in foreign currencies totalled euro 833,667 thousand (2017: euro 864,982 thousand), whereas liabilities denominated in foreign currencies amounted to euro 172,127 thousand (2017: euro 155,406 thousand).

41) Trust transactions

Euro thousand	31 Dec 2018	31 Dec 2017
Trust assets		
Loans and receivables credit institutions	53,430	46,400
Loans and receivables customers	63,800	103,308
Trust liabilities		
Amounts owed to credit institutions	53,430	46,400
Amounts owed to customers	63,800	103,308

42) Subordinated assets

Euro thousand	31 Dec 2018	31 Dec 2017
Financial investments	4,518	5,208

43) Assets pledged as collateral for the Group's liabilities

Euro thousand	31 Dec 2018	31 Dec 2017
Assets pledged as collateral		
Loans and receivables customers	226,684	312,075
Financial investments	15,512	17,223
Liabilities for which assets have been pledged as collateral		
Amounts owed to credit institutions	226,684	312,075
Amounts owed to customers	15,512	17,223

In the context of corporate funding via Oesterreichische Kontrollbank (OeKB), loans to and receivables from customers in the amount of euro 73 million (2017: euro 79 million) have been provided as collateral. These loans and receivables are guaranteed by means of Austrian government default guarantees, private insurance policies and draft guarantees. OeKB may not repledge or sell these loans to and receivables from customers if the Group performs in accordance with the contract.

Loans to and receivables from customers in the amount of euro 153 million (2017: euro 233 million) were provided as collateral for OeNB refinancing of VBW in the 2018 business year.

Within the scope of gilt-edged savings deposits, financial investments in the amount of euro 16 million (2017: euro 17 million) are held as securities.

44) Contingent liabilities and credit risks

Euro thousand	31 Dec 2018	31 Dec 2017
Contingent liabilities		
Liabilities arising from guarantees	291,728	340,016
Guaranteed letter of credit	1,205	1,382
Others (amounts guaranteed)	19,755	25,066
Commitments		
Unutilised loan commitments	3,152,667	4,375,600

Based on the management's estimation of cash outflow for financial guarantees, a provision was built for off-balance risks to the amount of the probable cash outflow under consideration of possible available collaterals. It amounts to euro 3,158 thousand (2017: euro 2,504 thousand).

According to the Spin-off and Transfer Agreement dated 1 June 2015, VBW has resumed the central organisation and central institution function from ÖVAG (now immigon portfolioabbau ag, immigon). Following this spin-off, claims for damages were filed against immigon. VBW is a co-defendant in these proceedings based on section 15 (1) SpaltG (Demerger Act); the liability of VBW is limited in terms of net assets assumed through the spin-off (within the meaning of section 15 (1) SpaltG). The total obligation in dispute from complaints under section 15 (1) SpaltG currently amounts to euro 5.4 million. The relevant obligations underlying the claims for damages are attributed to immigon as stipulated in the Spin-off Agreement. Should VBW ever become subject to such claims, the Spin-off Agreement entitles VBW to an indemnification claim against immigon. Based on immigon's press release published on 31 January 2019 concerning the audited financial statements as at 31 December 2018, VBW expects immigon to be in a position to service its liabilities. In case an economic burden for VBW arises nevertheless, as mutually agreed in the Association of Volksbanks, all members of the Association will take up their pro rata share of the costs.

Moreover, VBW is involved in various judicial proceedings both as plaintiff and as defendant. These proceedings are due to current banking business. The volume of the proceedings is not unusual. The outcome of the proceedings is not expected to have significant impact on the financial situation and profitability of VBW.

Additionally, there are no government interventions, judicial or arbitral proceedings (including those that are still pending or might yet be initiated according to the knowledge of VBW) that have existed or were completed within the last twelve months and have a significant impact on the financial situation or profitability of VBW Group or have recently had such an impact.

The table below presents future cash flows of contingent liabilities classified according to their contractual maturity, concerning guarantees also according to their expected maturity

	Loan	Guarantees	Guarantees
Euro thousand	commitments	as contracted	expected
31 Dec 2018			
Carrying amount	3,152,667	291,728	0
Undiscounted cash flows	3,152,667	291,728	3,158
Up to 3 months	3,152,667	291,728	316
Up to 1 year	0	0	1,263
Up to 5 years	0	0	1,579
31 Dec 2017			
Carrying amount	4,375,600	340,016	0
Undiscounted cash flows	4,375,600	340,016	2,504
Up to 3 months	4,375,600	340,016	250
Up to 1 year	0	0	1,002
Up to 5 years	0	0	1,252

As for loan commitments, the first possible time of utilisation was used for the presentation of the contractual term. Contracted guarantees are reported when the utilisation is first possible, while column guarantees expected shows management estimates of the expected utilisation over the period.

45) Operating lease liabilities

The future minimum lease payments in connection with operating lease liabilities are presented below:

Euro thousand	31 Dec 2018	31 Dec 2017
Up to 3 months	701	983
Up to 1 year	2,864	2,555
Up to 5 years	10,372	12,015
More than 5 years	67,459	61,423
Operating lease liabilities	81,396	76,976

The operating lease contracts mainly consist of rental contracts for branches.

46) Repurchase transactions and other transferred assets

As at 31 December 2018, VBW as pledgor had buy-back commitments under genuine repurchase agreements to euro 20,475 thousand (2017: euro 101,571 thousand).

The balance sheet does not contain any further financial assets for which material risks or rewards were retained.

Total related party transactions are measured as the average receivables and liabilities from/to credit institutions and customers. The calculation is based on the figures at the quarterly reporting dates during the period under review, which are summed together irrespective of whether plus or minus figures.

Transfer prices between the VBW Group and its associated companies are geared to usual market conditions. As in previous year, VBW Group does not have any other liabilities for unconsolidated affiliates or associated companies on balance sheet date.

The shareholder Republic of Austria exercises a significant influence on the VBW Group. Disclosures are limited to securities of the issuer Republic of Austria.

Loans and receivables granted to key management personnel during the business year

Euro thousand	31 Dec 2018	31 Dec 2017
Outstanding loans and receivables	451	549
Redemptions	98	17

At the VBW Group, the Management Board members as well as members of the supervisory board of the parent company are classified as management members in key positions. The presentation of the remuneration of key personel is included in note 10) General administrative expenses. No further contracts were closed with members in key positions.

As at 31 December 2018 loans to and receivables from credit institutions/customers contained transactions with the Volksbank-Sector amounting to euro 1,532,367 thousand (2017: euro 1,261,907 thousand) and amounts owed to credit institutions/customers included transactions with the Volksbank-Sector amounting to euro 2,536,499 thousand (2017: euro 2,388,510 thousand).

48) Disclosures on mortgage banking in accordance with the Austrian Mortgage Bank Act, including covered bonds

50) Events after the balance sheet date

In 2018, the Association of Volksbanks was again subjected to the annual SREP (Supervisory Review and Evaluation Process) within the scope of the Single Supervisory Mechanism (SSM) of the ECB. This year's SREP also considered the ECB stress test performed in 2018.

By resolution of the ECB adopted in February 2019, the result of the SREP was announced to VBW as the central organisation of the Association of Volksbanks.

The CET 1 demand amounting to 11.25 %, as determined for the Association of Volksbanks, that applies as at 1 March 2019 consists of the following: Pillar 1 CET requirement of 4.5 %, Pillar 2 requirement of 2.75 %, capital conservation buffer of 2.5 %, systemic risk buffer 0.5 %, buffer for systemically important institutions 0.5 % (new with effect from 1 January 2019), and Pillar 2 capital recommendation of 1.0 %. However, due to the currently applicable regulation, the buffer for systemically important institutions has no effect on the CET 1 demand or on the total capital requirement, since the higher of systemic risk buffer and buffer for systemically important institutions must be applied. As at 1 March 2019, the total capital requirement amounts to 13.75 % (Pillar 1 requirement of 8.0 %, Pillar 2 requirement of 2.75 %, capital conservation buffer of 2.5 %, systemic risk buffer 0.5 % or buffer for systemically important institutions 0.5 %).

Until entry into force of the new resolution with effect from 1 March 2019, the provisions of the decision dated 19 December 2017 continue to apply, extended by the buffer requirements as increased under the transitional provisions: capital conservation buffer 2.5 % as at 1 January 2019 (1.875 % until 31 December 2018) and systemic risk buffer

0.5 % as at 1 January 2019 (0.25 % until 31 December 2018) or buffer for systemically important institutions 0.5 % (new as at 1 January 2019).

Regulatory capital requirements were again increased by the ECB and constitute a challenge for the Association of Volksbanks, since meeting them will require capital enhancement measures.

On 5 February 2019, the international rating agency Fitch confirmed the long-term issuer rating of BBB of the Association of Volksbanks.

On 25 February 2019, VBW placed a covered bond with a face value of euro 500 million and a maturity of seven years (maturity date: 4 March 2026). Moody's provided the bond with a AAA rating, as awarded to the covered bond programme of VBW. The volume of the issue serves to finance credit growth within the entire Association of Volksbanks.

51) Segment reporting

The VBW Group now has two business segments retail and CO which correspond to strategic business fields. These segments fulfil a variety of tasks and are controlled in varying ways in accordance with the internal management and reporting structure. In this process, a business unit is organised as a profit centre, which means that all results are allocated to the business unit, irrespective of whether these results are generated in the business unit itself or by the parent company.

A report is submitted to the Managment Board and management for each business segment. These reports are based on VBWs' and the subsidiaries' separate financial statements. Interest results of the profit centre are calculated on the principles of the market interest method. Transfer prices for assessments and refinancing between entities within the Group are in line with standard market conditions. Expenses are divided between business segments based on the proportional service performance. The cost of Group projects is also allocated to business segments.

Retail

The retail segment comprises the standard banking services provided to private customers, SMEs and commercial clients in terms of investment and financing, advisory and investment services for securities, payment services, brokerage of insurance products, and foreign exchange business.

Services are typically performed through the branches as well as through internet and direct sales. Accordingly, this segment includes the results for the branches and the commercial clients profit centre.

CO

The CO segment comprises the top institution activities as well as the CO duties for the entire Austrian Association of Volksbanks. Treasury is primarily responsible for obtaining liquidity on the money and capital markets and for balancing liquidity within the Association of Volksbanks. Liquidity management in connection with regulatory requirements through management of the investment book in the areas of liquidity and interest rate risk is another key component of VBW's tasks as top institution and CO.

The syndicate financing division including large-scale house-building is another profit centre. VBW provides its services as a syndicate partner for large loan commitments held by commercial clients of the Volksbanks. The results of VB Services für Banken GmbH, which provides services to the Volksbanks for payment processing and settling securities transactions, are also included here.

Finally, all other activities are reported which are undertaken in managing the Association of Volksbanks and which VBW performs as CO in accordance with the CRR and Austrian Banking Act.

Consolidation

Consolidation matters are reported separately from other activities in the Consolidation column. These items contain amounts arising from consolidation processes that are not performed within a segment.

52) Risk report

General

Assuming and professionally managing the risks associated with the business activities is a core function of every bank. In its capacity as CO of the association of credit institutions under section 30a Austrian Banking Act, consisting of VBW and the affiliated banks of the Volksbank-Sector, VBW performs this central task for the Association of Volksbanks, so that the latter has in place administrative, accounting and control procedures for the recognition, assessment, management and monitoring of the risks associated with banking transactions and banking operations as well as of the remuneration strategy and practices (section 39 (2) Austrian Banking Act). The implementation of control within the Association of Volksbanks is effected through General, and, if necessary, Individual Instructions and corresponding working practice guidelines in the affiliated banks.

The following risks are classified as material within the Association of Volksbanks in the course of the self-assessment process:

- Credit risks
- Market risks
- Liquidity risks
- Operational risks
- Other significant risks (e.g. investment risk, strategic risk, reputational risk, equity risk, and business model risk)

Current developments

In 2018, the Association of Volksbanks was again subjected to the annual SREP (Supervisory Review and Evaluation Process) within the scope of the Single Supervisory Mechanism (SSM) of the ECB. This year's SREP also considered the ECB stress test performed in 2018.

By resolution of the ECB adopted in December 2018, the result of the SREP was forwarded to VBW as the central organisation of the Association of Volksbanks.

The CET 1 demand amounting to 11.25 %, as determined for the Association of Volksbanks, that applies as of 1 March 2019 consists of the following: Pillar 1 CET requirement of 4.5%, Pillar 2 requirement of 2.75 %, capital conservation buffer of 2.5 %, systemic risk buffer 0.5 %, buffer for systemically important institutions 0.5 % (new with effect from 1 January 2019), and Pillar 2 Guidance of 1.0 %. However, due to the currently applicable regulation, the buffer for systemically important institutions has no effect on the CET 1 demand or on the total capital requirement, since the higher of systemic risk buffer and buffer for systemically important institutions must be applied.

As at 1 March 2019, the total capital requirement amounts to 13.75 % (Pillar 1 requirement of 8.0 %, Pillar 2 requirement of 2.75 %, capital conservation buffer of 2.5 %, systemic risk buffer 0.5 % or buffer for systemically important institutions 0.5 %).

Until entry into force of the new resolution with effect from 1 March 2019, the provisions of last year's decision dated 19 December 2017 continue to apply, extended by the buffer requirements as increased under the transitional provisions: capital conservation buffer 2.5 % as of 1 January 2019 (1.875 % until 31 December 2018) and systemic risk buffer 0.5 % as of 1 January 2019 (0.25 % until 31 December 2018) or buffer for systemically important institutions 0.5 % (new as at 1 January 2019).

Regulatory capital requirements were again increased by the ECB and constitute a challenge for the Association of Volksbanks, since meeting them will require capital enhancement measures.

Risk policy principles

The risk policy principles of VBW comprise the standards for the management of risks that are applicable within the Association of Volksbanks and are defined by the CO Managing Board together with the risk appetite. A common understanding of risk management across the Association is the basis for developing risk awareness and a risk culture within the Company. The Association of Volksbanks carries on its activities subject to the principle that risks will only be accepted to the extent this is required to achieve strategic business goals. The associated risks are managed under an overall perspective subject to risk management principles by creating an appropriate organisational structure and corresponding business processes.

Organisation of risk management

VBW has taken all required organisational precautions to meet the requirements regarding modern risk management. There is a clear separation between trading and back office. A central, independent risk controlling function has been established. At Managing Board level, the Chief Risk Officer (CRO) is the head of Risk Controlling. Within the Managing Board responsibilities of the CRO, there is a separation between risk controlling and operational credit risk management. Risk assessment, risk measurement and risk control are carried out according to the dual-control principle. For the purpose of avoiding conflicts of interest, these tasks are performed by different organisational units.

The business model requires risks to be identified, assessed, measured, aggregated and controlled effectively. Risks and capital are managed by means of a framework of principles, organisational structures as well as measuring and monitoring processes that are closely aligned with the activities of the departments and divisions. As a prerequisite and basis of solid risk management, the Risk Appetite Framework (RAF) for the Association of Volksbanks is continuously being developed also within VBW, in order to define risk appetite and/or the level of risk tolerance (primarily by determining and verifying appropriate limits and controls) that VBW is prepared to accept to achieve its defined goals. The framework is regularly verified and adjusted to any regulatory changes, changes of the market environment or the business model. VBW aims to develop, by way of this framework, a disciplined and constructive control environment where all employees understand their role and responsibility.

Within the Association of Volksbanks, risks are controlled by three decision-making bodies in VBW: (i) Risk Committee (RICO), (ii) Asset Liability Committee (ALCO), (iii) Credit Committee (CC). The responsibilities of these committees include both subject areas of VBW as a single institution and matters concerning the entire Association of Volksbanks pursuant to section 30a Austrian Banking Act. Risk reporting in the affiliated banks takes place in the respective local bodies.

The RICO serves to control all material risks, with a focus at portfolio level, ensuring that risk policy decisions are in compliance with risk appetite. The aim is to provide the Managing Board of VBW with a comprehensive view of all risks (overall bank risk report) and with a summary of regulatory and other risk-relevant topics.

The ALCO is the central body for controlling interest rate, foreign currency and liquidity risks, as well as investment risks through positions in the banking book, with a view to optimising risk and return, and to securing refinancing in the long term.

The CC is the body responsible for credit decisions based on applicable definitions of responsibilities, for approving action plans for customers undergoing restructuring or debt enforcement, as well as for approving allocations to individual allowances for impairment, provisions and waivers.

Regulatory requirements

The regulations regarding equity base at VBW are implemented as follows:

Pillar 1: Minimum capital requirements

The implementation of Pillar 1 at VBW as CO is aimed at meeting minimum regulatory requirements. With respect to both credit risk and market risk, and also for operational risk, the respective regulatory standard approaches for determining the minimum capital requirements apply.

Pillar 2: Internal Capital & Liquidity Adequacy Assessment

Regulatory control and minimum requirements of Pillar 2 are implemented within the scope of the Internal Capital Adequacy Assessment Process (ICAAP) and the Internal Liquidity Adequacy Assessment Process (ILAAP). In this context, the Association of Volksbanks implements all measures required to ensure sufficient own funds and liquidity, at all times, for current business activities and also for those planned in future, as well as the associated risks.

Pillar 3: Disclosure

The requirements of Pillar 3 are met by publishing the qualitative and quantitative disclosure regulations pursuant to Regulation (EU) no. 575 / 2013 (CRR) and Directive 2013/36/EU (CRD IV) on the bank's own website under Volksbank Wien / Offenlegung Volksbank Wien AG.

Risk management across the Association

The risk controlling function of VBW as CO is responsible for risk governance, methods and models for strategic risk management issues across the Group, as well as the regulations for control at portfolio level. For the purpose of performing its steering function, the CO has issued General Instructions (GI) for the affiliated banks. The GI ICAAP, GI ILAAP, GI Principles of Credit Risk Management (PCRM) and the downstream manuals of the Association govern the risk management function in a binding and uniform manner. The risk strategy and the NPL strategy for the Association of Volksbanks are also issued in the form of a GI. The aim is to comprehensively and verifiably document and set down general conditions and principles, consistently throughout the Association, for the assessment and management of risks, and for the creation of processes and organisational structures. Within the scope of their general duty of care, the members of the Managing Board and the managing directors of all affiliated banks must ensure, without exception and restriction, in the interest of the respective companies, that the General Instructions are put into effect formally and de facto. Any deviations and special regulations concerning the General Instructions shall only be permissible in exceptional cases and must be coordinated with VBW as the CO in advance and approved by the latter.

Within the Association of Volksbanks, comprehensive communication about risks and a direct exchange of information is considered extremely important. In order to allow for professional exchange in a working context, an expert committee was set up for risk controlling. Each affiliated bank must dispose of its own Risk Control Function (RCF) that is responsible for independent monitoring and communication of risks within the respective affiliated bank. The risk controlling expert committee facilitates an exchange of information between the Risk Controlling Function of VBW (as CO) and the RCF of the affiliated banks.

Risk governance as well as the methods and models are regularly refined and adjusted to currently prevailing basic conditions by the Risk Controlling Function of VBW as CO. Apart from regular remodelling, recalibration and validation of

the risk models, the methods in the ICAAP & ILAAP are being improved continuously, with new regulatory requirements (e.g. IFRS 9) being monitored and implemented in a timely fashion.

a) Internal capital adequacy process

To ensure a sustainable, risk-adequate capital base, VBW, in its capacity as CO of the Association of Volksbanks, has set up an Internal Capital Adequacy Assessment Process (ICAAP) as a revolving control cycle, in line with international best practices, that both VBW and all affiliated banks are subject to. The ICAAP starts by identifying the material risks of the Association of Volksbanks, followed by a risk quantification and aggregation process, determination of risk-bearing capacity, limitation, and concludes with ongoing risk monitoring and the measures derived therefrom. Explanations regarding the ILAAP are presented in item d) Liquidity risk.

The individual elements of the cycle are performed at varying intervals (e.g. daily for measuring market risk / trading book, quarterly for preparing the risk-bearing capacity statement, annually for self-assessment and determination of the risk strategy). All the activities described within the cycle are reviewed for up-to-dateness and adequacy at least annually, and adjusted to the respective current general conditions if necessary; they are approved by the Managing Board of the CO.

Risk inventory

The risk inventory serves the purpose of determining the risk potential of newly accepted significant exposures and of measuring existing significant risks. The risk inventory results are summarised and analysed for VBW. The results of the risk inventory are used to inform the risk strategy and form a starting point for the risk-bearing capacity statement, as significant types of risk must be taken into account within the risk-bearing capacity statement.

Risk strategy

The risk strategy of VBW is based on the risk and business strategy of the Association and provides for consistent general conditions and principles for uniform risk management. The risk strategy is reviewed for up-to-dateness and adequacy at least annually and adjusted to the respective current general conditions. It provides the rules for the handling of risks and ensures risk-bearing capacity at all times. The risk strategy is prepared in parallel with business planning. Across the Association, the contents of the risk strategy and of business planning are linked up by incorporating the targets of the Risk Appetite Statement in GI Controlling - Planning and Reporting.

Risk Appetite Statement (RAS) and limit system

The core element of the risk strategy is a Risk Appetite Statement (RAS) and integrated limit system in line with the business strategy. The RAS set of indicators comprising strategic and deepening indicators helps the Managing Board to implement central strategic goals of VBW, specifying the same in operational terms.

The risk appetite, i.e. the indicators of the RAS, are derived from the business model, the current risk profile, the risk capacity and the revenue expectations and/or the strategic planning process. The limit system broken down by risk subtypes and the RAS provide the framework for the maximum risk that VBW is ready to accept to achieve its strategic targets. The RAS indicators are provided with a target, a trigger and a limit value and are monitored on a current basis, as are the aggregate bank and partial risk limits. In this way, it can be ensured that deviations from the risk strategy are identified swiftly and that counter-measures can be initiated in a timely manner. The RAS set of indicators is made up as follows:

- Capital-ratios (e.g. CET1 ratio, T1 ratio, TC ratio, RBC)
- Credit risk ratios (e.g. NPL ratio, coverage ratio, loans and receivables to foreign customers, net allocation ratio / risk provisions)

- Interest rate risk ratios (e.g. OeNB interest rate risk coefficient, PVBP, IRRBB ratio)
- Liquidity risk ratios (e.g. LCR, survival period)
- Ratios relating to operational risk (e.g. OpRisk losses in proportion to CET1, ICS implementation rate)
- Other risk-relevant ratios (e.g. CIR, LDR, leverage ratio)

Risk-bearing capacity statement

The risk-bearing capacity statement forms the basis of the quantitative implementation of the ICAAP. It is used to provide evidence of the fact that the risks assumed are sufficiently covered by adequate internal capital at all times and to ensure such cover also in future. For this purpose, all relevant individual risks are aggregated. This aggregate risk is then compared to the existing and previously defined internal capital. Compliance with the limits is monitored and reported on quarterly.

In determining risk-bearing capacity, different objectives are pursued that are reflected in three perspectives:

- Regulatory perspective (compliance with regulatory own funds ratios)
- Economic going-concern perspective
- Economic liquidation perspective (gone-concern perspective)

The regulatory Pillar 1 perspective compares the sum of all risks to be covered by capital under regulatory provisions, according to the methods provided for, with the internal capital defined (based on regulatory definitions). Ensuring regulatory risk-bearing capacity is provided for under the law and constitutes a minimum requirement. The composition of the regulatory aggregate risk position of VBW corresponds to that of any typical retail bank. In the process, all risk positions of credit and market and operational risk as well as the CVA charge are taken into account.

Under the going-concern perspective, the continued existence of orderly operations is meant to be ensured. Smaller risks that may occur with a certain probability should be absorbed without jeopardising current operations. Hidden reserves, the annual result achieved in the current business year, the target profit/loss for the coming 12 months, as well as those own funds that exceed the CET1 capital ratio of 8.25 % as defined in the 2018 risk strategy are essentially recognised as internal capital. During risk quantification, a confidence level of 95 % and a holding period of one year are applied. The aggregate bank risk limit is set at 100 % of the available internal capital in the economic going-concern perspective.

The economic liquidation perspective puts a focus on securing creditors' claims in case of liquidation. Under that perspective, the risk covering potentials are defined on the basis of internal capital. The latter is based on the regulatory definition, but comprises additional components, such as hidden losses/reserves. Also during determination of the aggregate risk position, internal procedures – normally VaR – are used. In doing so, not only the risks to be covered by own funds under regulatory provisions are considered, but all quantifiable risks considered significant within the scope of self-assessment are included in the consideration. During quantification of risk under a liquidation perspective, a 99.9 % confidence level, with a holding period of one year, is applied. The aggregate bank risk limit is set at 85 % of the available internal capital in the economic liquidation perspective.

Stress testing

For credit, market and liquidity risks, as well as for operational risk, risk-type-specific stress tests and/or risk analyses are performed regularly, with crisis scenarios being conceived in such a way that the occurrence of events that are highly unlikely, but not impossible, is simulated and estimated. By way of this approach, huge losses can be identified and analysed.

Apart from these risk-type-specific stress tests and sensitivity analyses, bank internal stress tests are regularly carried out across risk types. The semi-annual internal stress test for the bank as a whole consists of scenario analyses, sensitivity analyses and the reverse stress test. In the scenario analyses, economic crisis scenarios are defined and the changed risk parameters for the individual risk categories and areas of business derived therefrom. Apart from the risk side, the effects of crisis scenarios on internal capital are also determined. Finally, in a stressed risk-bearing capacity analysis, the various effects of the crisis scenarios on risk-bearing capacity are summarised and analysed. Based on the findings of the bank-wide internal stress tests, recommended actions are defined and transposed into measures. For instance, the reporting framework is extended by new aspects, additional limits are defined, specific or high-risk industries monitored more closely, and planning targets for strategic risk indicators derived.

At present, EU-wide stress tests across risk types are being carried out by the EBA/ECB every two years (most recently in 2018). The results of the stress tests are used to assess the capital requirement within the SREP. In the years between the EBA/ECB stress tests across risk types, the supervisory authority performs risk-specific stress tests. In that context, the ECB plans a liquidity stress test in 2019.

Risk reporting

The reporting framework implemented at VBW is meant to ensure that all significant risks are fully identified, monitored and efficiently managed promptly. The reporting framework offers a holistic and detailed presentation of the risks and a specific analysis of the individual risk types.

The monthly overall bank risk report serves as a core element of the reporting framework. The overall bank risk report provides a summary of the situation and development of the RAS indicators, the utilisation of the risk-bearing capacity, addressing all significant risks and containing comprehensive qualitative and quantitative information, among others. The overall bank risk report provides the Managing Board with management-related information on a monthly basis and is sent to the Supervisory Board of VBW quarterly. Complementing the overall bank risk report, various risk-specific reports (e.g. analyses within credit risk regarding the development of individual sub-portfolios) are provided in addition to the reporting framework.

Recovery and resolution planning

As VBW belongs to the Association of Volksbanks, which was classified as a significant credit institution, VBW has worked out a recovery plan and submitted the same to the relevant regulatory authorities (e.g. ECB). This recovery plan is updated at least once a year and takes into account both changes of the bank's business activities and changes with respect to regulatory requirements.

b) Credit risk

Credit risk refers to potential losses that occur because a contract partner fails to meet its payment obligations.

Credit risk management organisation

Within VBW, the responsibilities associated with credit risk are taken care of by the Credit Risk Management function and certain subdivisions of the Risk Controlling function. The departments Credit Risk Management Retail Branches, Credit Risk Management Real Estate & Corporate Financing, Restructuring & Workout are responsible for operational credit risk management functions. The Risk Controlling function is responsible for risk assessment, risk measurement and risk control as well as for credit risk reporting at portfolio level.

Operational credit risk management

Lending principles

- Loan transactions are necessarily based on decisions involving borrower-specific limits. The determination and monitoring of certain limits is subject to uniform regulations at the level of the Association.
- The rating obligation applies to all borrowers with exposures above the defined minimum amount. The rating process is based on the dual-control principle and is applicable across the Association.
- In selecting collaterals, attention is paid to the cost-benefit ratio, and accordingly recoverable collaterals that cause little administrative effort and are not very cost-intensive will preferably be resorted to, as well as actually realisable collaterals. For this reason, physical collaterals, such as real estate collaterals, and financial collaterals, such as cash collaterals or collaterals in the form of securities, are given priority. The recoverability and enforceability of collaterals must basically be assessed prior to any credit decision. Principles for the management of collaterals and uniform rules for the selection, provision, administration and valuation of collaterals apply at the level of the Association.
- Foreign currency and repayment vehicle loans are basically no longer offered or granted.
- The principal market for lending business is the Austrian market.
- Syndicated credits will basically be concluded together with the CO.

Decision-making process

In all units of VBW that generate credit risk, there is a strict separation of sales and risk management functions. All decisions in individual instances are taken strictly observing the dual-control principle; clear processes have been defined for this purpose. Limit systems play an important role in this context, as they provide a framework for the decision-making powers of the individual units.

Monitoring of exposures and collaterals

The processes for the review of exposures and collaterals are governed by uniform regulations across the Association and must be observed by all affiliated banks.

Limits

The monitoring, control and limitation of the risk of individual exposures and of risk clusters is effected according to the differentiated limit categories.

Within the Association of Volksbanks, the group of connected clients (GcC) is used as the basis for limits in case of new lending and for current monitoring. As regards the limits, the requirements on the level of the Association of Volksbanks differ from those applicable to the individual banks. A review of the limits on individual transaction level takes place continuously within the credit risk management function of the affiliated bank and is monitored by the credit risk management function of VBW in its role as CO, using centralised analyses.

In connection with portfolio limits, within the Association of Volksbanks, mainly limits for external financing transactions and materiality limits for regions and industry sectors are being defined at present. These limits are relevant for the lending process and are monitored in monthly intervals by Risk Controlling.

In order to achieve a sustainably healthy portfolio quality, requirements exist for transactions with new customers and increases of the exposure of existing customers; these depend on the customer's credit rating and are applicable across the Association.

Intensified credit risk management

Within the Association of Volksbanks, and accordingly also within VBW, intensified credit risk management means the special monitoring of customers with payment difficulties and/or customers threatened by default. Among others, intensified credit risk management comprises processes relating to the early detection of customers threatened by default, the dunning procedure, forbearance processes, as well as default identification.

Early warning: During the early warning process, customers who might show an increased risk of default within the next few months are systematically identified on the basis of certain indicators. In this way, VBW is put in a position to counteract potential defaults early on. The early identification of customers threatened by default is governed within a uniform early warning system throughout the Association.

Dunning procedure: The dunning procedure applied across the entire Association of Volksbanks and accordingly within VBW is uniform and automatised and based on corresponding predefined processes.

Forbearance: Forbearance refers to concessions made by the lender to the debtor in the context of financial difficulties or imminent financial difficulties of the debtor, which the lender would not grant otherwise. Debtors whose transactions were classified as forborne are subject to special (monitoring) regulations within the Association of Volksbanks.

Default identification: The process of default identification serves to recognise defaults in time. A customer is deemed defaulted if there is a default of performance of more than 90 days, pursuant to the CRR, and/or if complete settlement of the debt is considered unlikely without realising any collaterals. The Association has defined 13 possible types of default event that are used for the consistent classification of default events across the Association of Volksbanks. Among others, default identification also builds on the early warning and forbearance processes described above. Additionally, there are further (checking) processes, such as the analysis of expected cash flows within regular or event-driven exposure checks, that may trigger classification to a default category.

Problem Loan Management

Within the Problem Loan Management system (PLM) applicable throughout the Association, customers are classified on the basis of clearly defined indicators applied consistently across the Association. Subsequently, a distinction is made between customers

- under intensive supervision (negative change of risk estimation, but not defaulted yet)
- in the process of restructuring (imminent risk of default or defaulted already, but customer is eligible for restructuring), and
- subject to debt enforcement (defaulted customers not eligible for restructuring)

and appropriately differentiated processing routines have been put in place consistently throughout the Association of Volksbanks.

Quantitative credit risk management and credit risk controlling

Measurement and control of credit risk

The development of sophisticated models as well as of systems and processes tailored to the bank-specific portfolio is required for the measurement and control of credit risk. In this way, the credit decision is meant to be structured and improved on the one hand; on the other hand these instruments and/or their results also form the basis of portfolio management.

The results of credit risk measurement are reported to the Managing Board within the scope of the Risk Committee on a monthly basis. The most important objective of the use of the credit risk models and tools is to avoid losses through early identification of risks.

Rating systems

Across the Association, standardised models are applied to determine credit ratings (the VB rating family) and to determine the amount of loss in case of default. The expected probability of default of each customer is assessed via the VB rating family and expressed through the VB master scale, which comprises a total of 25 rating levels. The PD range used not only allows for a comparison of internal ratings with classifications by external rating agencies, but also a comparison of credit ratings across customer segments.

The rating classes in rating category 5 cover the reasons for defaulting on loans as applied across the Association and are also used for reporting non-performing loans (NPL).

Credit Value at Risk

The calculation of the economic capital requirement necessary for the credit risk is effected by means of the Credit Value at Risk (CVaR) method. For this purpose, the Association of Volksbanks has chosen a statistical simulation method. A refined Merton model, adjusted to internal requirements, is used for modelling the credit exposures in the loan portfolio in detail.

Concentrations

Quantification and valuation of the effects of concentrations takes place monthly, via the risk parameters identified, on the one hand, and in the course of preparing the risk report, on the other hand.

Counterparty default risk

The counterparty risk for market values from unsecured derivatives is taken into account by way of credit value adjustments (CVA) or debt value adjustments (DVA) – as approximation function of the potential future loss regarding counterparty default risk. The expected future exposure (EFE) is determined by means of the Monte Carlo method. The probabilities of default for counterparties for which no credit spreads are observable on the market are based on internal ratings of the Association of Volksbanks. The Association does not use any internal model for calculating the counterparty default risk.

Credit risk mitigation

The consideration of collaterals within the scope of the credit risk models for CVaR and in expected loss calculations is primarily effected through the LGD models applied across the Association. The starting point for taking into account collaterals is the respective current market value, fair value, nominal value or redemption value.

For the purpose of reducing the counterparty risk of derivative transactions, the Association of Volksbanks uses credit risk mitigation methods such as netting and exchange of collaterals. The Association strives to conclude standardised ISDA framework agreements for bilateral netting and a corresponding Credit Support Annex (CSA) with all key market participants. The fair values of derivative transactions with counterparties are reconciled daily. If the fair values exceed certain contractually agreed thresholds, such excess amounts must be covered by collaterals. These collaterals are recognised in regulatory terms and reduce the risk.

Factors influencing the estimate of Expected Credit Losses (ECL) and impairments

Various influencing factors, assumptions and methods are used to measure any significant increase of credit risk.

Rating systems

Upon initial recognition, each exposure is allocated to a credit risk rating based on the information available about the borrower. The exposures are monitored continuously, and the risk management guidelines of the bank require credit risk renewal at least once a year. The established governance processes, including RAS limits (Risk Appetite Statement), ensure that valid credit assessments exist for more than 98% of exposures.

The bank disposes of a comprehensive set of rating systems to cover all relevant types of receivables. The most important elements of the rating systems for the major portfolios are shown in the following table:

Portfolio	Main influencing factors of the rating systems
SME and Corporate	Information that was obtained during the regular review of annual financial statements and management accounts (economic circumstances of the owners) of the borrower
	Actual and expected material changes of the regulatory, technological or economic environment of the borrower
	 Qualitative assessment of borrower management, the transparency of information provided by the borrower, the adequacy of the borrower's accounting processes and other soft facts
	New and/or expected changes of the financial situation of the borrower not reflected in the most recent financial statements
	 Internally obtained information about the borrower's conduct, e.g. overdrawing of advances on current account and utilisation of credit facilities
	To the extent available, ratings of the borrower or of the borrower's parent company by external rating agencies
Private Customers	 Credit standing indicators as well as sociodemographic assessment of the request Information obtained from credit agencies
	 For new lending business with existing customers and for current monitoring – internally collected data regarding the customers' account conduct, e.g. delays in payment and changes with respect to incoming or outgoing payments
Banks	Information that was obtained during the regular review of annual financial statements, disclosures and reports of the borrower
	Qualitative assessment of market position, asset quality and concentration risk of the counterparty's portfolio
	Implicit support or explicit guarantees from states, governments or parent companies

All rating systems are regularly validated according to qualitative and quantitative criteria by an independent unit within Risk Controlling, including backtesting for actual rating migrations and defaults.

All rating systems apply the Volksbank master scale that consists of 20 rating classes plus 5 additional classes for defaulted customers. To any rating class, the master scale will allocate intervals of probabilities of default (PD) that do not overlap. The PDs of the rating system are modelled as long-term through-the-cycle (TTC) probabilities of default over a period of 12 months. Ratings by external rating agencies are also reproduced on the Volksbank master scale by way of statistical analyses of the historical default rates published by the rating agencies.

Lifetime Probability of Default

Ratings provide essential input for determining the lifetime PD for ECL calculation. For the purpose of analysing lifetime PD, the portfolio of Volksbank is divided into the following segments:

SME and Corporate

- Private Customers
- Banks
- Countries
- Big Corporations (companies with ratings by external rating agencies)
- Other Exposures (mainly real estate and public infrastructure projects that are not dealt with using the usual rating systems for SME or Corporate)

For the Private Customers, SME and Corporate, and Other Exposures segments, the bank extracts long-term, representative samples of internal ratings and defaults that cover all material subsegments and rating classes. Statistical models are used to analyse the data collected and to prepare estimates regarding residual term PD and the way these are expected to change over the course of time.

For the Banks and Finance, Non-financial Companies and Countries segments, the bank uses long-term default studies of the external rating agencies to determine the lifetime PD by rating class.

Future-oriented information

The bank takes account of future-oriented information, both in assessing whether the credit risk of any instrument has increased significantly since its initial recognition, and in measuring ECL. Based on the analysis carried out by economists of the bank's research department and taking into account various market data, the bank will formulate:

- a base case scenario for the future development of the relevant economic variables. The base case scenario
 constitutes the most probable outcome and has been reconciled with the information used by the bank for
 other purposes, such as strategic planning and budgeting; and
- two further possible prognostic scenarios that constitute one more optimistic and one more pessimistic outcome of the relevant economic variables.

The prognostic process comprises both the forecast of the development of the relevant economic variables over the course of the next three years and the estimate of probability for each scenario. The bank performs regular (semi-annual) stress tests with shocks to quantify the effects of a massive deterioration of economic conditions and to analyse the necessity of re-calibration of the base case scenario and/or of the other prognostic scenarios.

Consideration of future-oriented information

The bank performs a thorough analysis in order to identify and calibrate the relationships between changing default rates and changes of the most important macroeconomic factors.

For private customers, the analysis is based on time series of average default rates estimated on the basis of the internally available data set. A regression model containing the explanatory variables – Austria's unemployment rate and average interest rate of 10-year Austrian government bonds – is used.

The analysis for SME and Corporate as well as for Banks and Finance is based on a simulation method. In the process, several simulations of the financial statements of the borrowers in the portfolio are performed and the rating migrations simulated are used for calibrating the regression model. Explanatory variables in the regression model for SME and Corporate are the total growth of GDP in Austria and the inflation rate (CPI). The gold price and the total growth of GDP of the European Union are used as explanatory variables in the model for Banks and Finance.

The SME and Corporate model is applied to incorporate future-oriented information in risk assessments in the portfolio of externally rated big corporations. This extrapolation is effected because the Volksbank portfolio in this segment is below

0.5 % of total exposures. The model used for the Other Exposures segment is a weighted combination of the models for SME and Corporate (80 %), Private Customers (14 %) and Countries (6 %).

Definition of default and degradation

Any financial asset is considered defaulted (Stage 3), if:

- it is unlikely that the borrower is going to meet its loan obligations in full without recourse to certain measures, such as the realisation of collateral (if available); or
- if the borrower has been in default with respect to any material loan obligation for more than 90 days.

The definition of default is fully in line with the default definition of the bank for capital adequacy purposes (CRR).

The process of assessing unlikeliness-to-pay (UTP) is supported by a comprehensive early warning system (EWS). The EWS uses various qualitative and quantitative indicators to identify potential significant increases in credit risk, including (but not limited to) rating downgrades, negative observations regarding account conduct or deteriorations of certain financial ratios of the borrower. Loans and receivables to borrowers, the repayment of which is considered unlikely will be allocated to Stage 3 for impairment purposes. Borrowers with any less substantial, but still significant increase in credit risk will be rated as Stage 2 for impairment purposes.

Further indicators for allocation to Stage 2 are:

- Borrowers with payments overdue for more than 30 days for material exposures
- Forbearance measures as qualitative indicator for a significant increase in credit risk
- All financial instruments where the bank is not able to assess the credit risk upon initial recognition or the credit risk at the balance sheet date.

The bank calibrates a bidirectional illustration of the changes of lifetime credit losses and the rating migration from initial recognition until the current balance sheet date, taking into account the respective current future-oriented information. Hence, the quantitative stage transfers are derived from significant downgrades of the customer's current rating compared to the credit risk upon initial recognition. Based on the Volksbank master scale with 20 (performing) rating classes, the number of rating class downgrades leading to Stage 2 is 1 to 5, depending on the original maturity and residual term of the respective financial instrument, on the initial rating, on the customer segment and on the current future-oriented information.

Measurement of Expected Credit Loss (ECL)

The bank determines ECL on the basis of the individual instrument, regardless of the materiality of the exposure.

Performing portfolio

For the performing portfolio (Stage 1 and Stage 2), measurement is based on model parameters derived from internally developed statistical models and other historical data.

The most important model parameters for ECL measurement are:

- Probability of Default (PD);
- Exposure at Default (EAD), subdivided into secured EAD and unsecured EAD; and
- Loss Given Default (LGD).

The PD parameters depend on the current rating and on the segment of the borrower and are reconciled with futureoriented information as described above.

The EAD parameter is measured as the forecast future exposure of the relevant financial instrument. The forecast is based on the cash flow plan of the instrument. For ECL calculation, the bank uses the cash flow plan from the Asset Liability Management (ALM) system. It is used to reconcile the ECL calculation and the strategic interest rate and liquidity risk management with each other. The cash flow plan is based on the contractual terms of the financial instrument, including amortisation, and is adjusted in line with the comprehensive ALM models of the bank, including (but not limited to) interest rate forecasts for variable-yield instruments. For off-balance-sheet financial instruments, such as credit facilities or guarantees, the bank uses Credit Conversion Factors (CCF) to determine the amount of the receivable in case of default (off-balance EAD). The CCF parameters are estimated using the account conduct information of previously defaulted customers over a period of 12 months prior to default. The bank uses the regulatory CCF benchmarks set down in the CRR for product types where only limited internal standard data is available.

The EAD is subdivided into secured EAD and unsecured EAD components that depend on the value of the collaterals pledged by the borrower. The starting point for secured EAD calculations are the lending values of the collaterals. These lending values are regularly verified and updated in line with the bank's risk management guidelines (e.g. real estate valuations are re-estimated at least once within 3 years and immediately after the occurrence of any material event within the customer relationship, such as credit loss, extension of credit facility or roll-over. The secured EAD is that part of the EAD that is covered by collaterals (limited to 100 % of EAD). The unsecured EAD is considered as the rest of the EAD.

The LGD is the amount of probable loss upon default. The secured LGD and unsecured LGD parameters are determined separately. The secured LGD parameter reflects the residual risk that derives from the probability that a certain collateral cannot be liquidated at a sustainable price at the time of default. The unsecured LGD parameter reflects any defaulted borrower's readiness and ability to pay back the obligations beyond the lending value of available collaterals. Both LGD parameters combined measure the realisation risk, including the cost of liquidating collaterals, as well as the time value of money (based on the effective interest rate of the defaulted assets).

The bank determines the LGD parameters on the basis of the history of the rates of recovery of claims against defaulted customers. For certain portfolios, where the bank does not dispose of sufficient historical default event data, an expert estimate will be effected. The following table shows the most important segments:

Portfolio	Main influencing factors for LGD						
Corporate	Internal historical data of default events and recoveries, including date of default and date of conclusion / event status						
SME	Most important type of collateral (residential real estate, insurance policies, others) taken into account						
Private Customers							
Banks	Expert estimatesRegulatory benchmarks set down in the CRR						
Others	Expert estimates and scenario analyses						

Expected losses for financial instruments of Stage 1 are forecast over the shorter of a period of 12 months or the maturity of the instrument. For financial instruments of Stage 2, the expected losses are forecast for the entire term of the instrument. The maturity coincides with the contractual term. In case of financial instruments such as loan commitments and

guarantees, the contractual maturity is determined based on the first day when the bank is entitled to request repayment or to terminate any loan commitment or guarantee. In cases where the contractual term could not be determined (e.g. if the borrower has an unlimited option for extension), the total maturity of the instrument is determined to be 50 years.

The ECL is calculated as the present value of the expected losses as forecast. Discounting is effected using the effective interest rate of the instrument.

Defaulted receivables

In case of defaulted customers (Stage 3), measurement depends on the significance of the receivable.

For defaulted customers with a total exposure of more than euro 750 thousand and for a limited number of special cases, the ECL estimate will be performed without applying statistical model parameters. Instead, the bank will estimate the cash flows primarily on the basis of the individual instruments in two scenarios:

- Going concern: After restructuring and forbearance measures, the borrower is able to meet the obligations.
- Gone concern: The borrower is not able to cover the obligations, and the bank liquidates the collateral.

The recovery cash flows and the probabilities of both scenarios will be estimated at the level of the individual instrument, taking into account documented benchmarks and guidelines.

The ECL is calculated as the difference between carrying amount of the financial instruments and the probabilityweighted average present value of the return flows in both scenarios. Discounting is effected using the effective interest rate of the instrument

For defaulted borrowers not treated as described above, the statistical model approach is applied. The ECL is determined by multiplying the carrying amount of the financial instrument with LGD. The LGD parameter is estimated using the same historical random sample data that are used for LGD in the performing portfolio. The type of collateral (residential real estate, commercial real estate, insurance policies etc.) and the amount of the collateral, in particular, are taken into account by dividing the defaulted exposure into a secured and an unsecured component, and by applying the secured LGD and the unsecured LGD. The approach does not require any additional discounting, as the present value effect is incorporated in the LGD estimate anyway.

Regulatory risk provision - NPL backstop

With effect from 30 June 2019, the supplement to the ECB guidance to banks on non-performing loans dated March 2018 stipulates criteria for a so-called statutory provisioning backstop for non-performing loans. It stipulates that a risk provision must be available in the full amount for the unsecured part of a loan after two years at the latest, and for the secured part after seven years at the latest.

In line with the backstop logic (including supplementary letters of the supervisory authority regarding pre-existing loan portfolios), the risk provisions will develop differently in relation to exposures, depending on the time of default. The difference between economic risk provisions under IFRS 9 and regulatory risk provisions in line with the backstop must be recorded directly in equity.

Credit risk reporting

Credit risk reporting takes place monthly with the aim to provide a detailed presentation of the credit risk existing at a certain reporting date and to report the same to the entire Managing Board. Relevant reports are prepared for VBW, its

major units and their key areas of business. The information is also included in the credit risk portions of the overall bank risk report.

The reports comprise a quantitative presentation of credit risk information relevant for risk control, which is supplemented by a brief assessment of the situation and additional qualitative information, if applicable.

The following analyses are part of the monthly report:

- Portfolio distribution
- Development of new business
- Distribution of credit ratings
- Non-performing loans (NPL)
- Forbearance
- Credit risk concentrations
- Country group analysis
- Customer segments
- Distribution across industry sectors

Development of the credit risk-related portfolio in 2018

Definition: credit risk-related portfolio

The credit risk-related portfolio summarises all positions that include a credit risk in the narrower sense. Credit risk-related positions are included in the following balance sheet and off-balance sheet items:

- Liquid funds excl. cash in hand, since the latter does not include any credit risk
- Loans and receivables to credit institutions, gross
- Loans and receivables to customers, gross
- Assets held for trading: only fixed-income securities are included, but no positive market values from derivatives, as they do not include any credit risk in the narrower sense
- Financial investments: here, too, only fixed-income securities are included. Equities are excluded, as they do not include any credit risk in the narrower sense
- Contingent liabilities: liabilities arising from guarantees, contingencies and letters of credit are included, other liabilities are excluded
- Credit risks: include commitments not utilised yet

The following table shows the credit risk-related portfolio as at 31 December 2018 compared to the previous year. The relevant figure is the gross value before deduction of any impairments, collaterals or other credit risk mitigating securities.

Credit-risk-relevant portfolio

Euro thousand	31 Dec 2018	31 Dec 2017
Liquid funds	1,510,901	1,758,462
Loans and receivables credit institutions	1,986,707	1,703,912
At amortised cost	1,986,448	1,703,912
At fair value	259	0
Loans and receivables customers	5,416,158	4,810,325
At amortised cost	5,216,727	4,810,325
At fair value	199,431	0
Assets held for trading - fixed-income securities	6,067	8,320
At fair value	6,067	8,320
Financial investments - fixed-income securities	2,051,586	1,803,197
At amortised cost	1,707,603	316,104
At fair value	343,983	1,487,093
Contingent liabilities	292,933	341,397
Credit risks	3,152,667	4,375,600
Total	14,417,018	14,801,213

As at 31 December 2018, the total credit risk-related portfolio amounted to euro 14,417,018 thousand (2017: euro 14,801,213 thousand). Loans and receivables to customers constitute the biggest group of receivables, which corresponds to the business model of classic lending business with a focus on Private and SME customers. At VBW, there are no receivables from finance leases.

Loans and receivables to credit institutions and liquid funds are primarily used to manage liquidity and include a comparatively low credit risk. Financial investments primarily include securities from the Treasury portfolio that are also preferentially used to manage the liquidity of the entire Association of Volksbanks. The majority of credit risk-related securities are Austrian and European government debentures and covered bonds of European banks in the investment grade range. A securities portfolio with the main objective of generating profits from market trends is not aimed at within the Association of Volksbanks. As liquidity risk is controlled centrally by VBW in its role as CO of the Association of Volksbanks, there are hardly any credit risk-related positions in these balance sheet items within the other Volksbanks.

Among off-balance sheet items, it is mainly loan commitments not utilised yet and liabilities from guarantees and contingencies that are of significance.

Therefore, the internal focus of credit risk control is on balance sheet and off-balance sheet loans and receivables to customers.

Development by customer segments¹

The following tables show the distribution of the credit risk-related portfolio by balance sheet items and customer segments. As VBW assumes the central liquidity management function within the Association of Volksbanks, an essential customer segment of credit risk-related positions is the public sector. This segment includes the amount owed by the central bank and the major part of financial investments. In loans and receivables to customers, the largest customer segment of the credit risk-relevant items is the SME segment with euro 2,575,983 thousand as at 31 December 2018 (2017: euro 2,478,425 thousand), followed by the Private Customer segment.

¹ The definition of customer segments is derived from the regulatory classification criteria.

Development by currencies

In line with the risk strategy, the major part of the loan portfolio is denominated in euros; the FX holdings within loans and receivables to customers – especially FX loans – are gradually reduced.

Development of repayment vehicle and foreign currency loans

As at 31 December 2018, the total borrowings under repayment vehicle and foreign currency loans amounted to euro 333,717 thousand (2017: euro 368,955 thousand).

Development by countries

The main business activity of the Association of Volksbanks, and thus of VBW, focuses on the Austrian market. This is also evident from the following tables. At 31 December 2018, Austrian exposures accounted for 88.3 % of the credit risk-related portfolio (2017: 90.2 %).

Development by sectors¹

The most important sector within loans and receivables to customers of VBW are private households with 42.5% as at 31 December 2018 (2017: 40.3%). The largest commercial sector within VBW is the real estate sector. It accounts for a share of 35.6% (2017: 31.5%). As at 31 December 2018, the largest commercial sector within loans and receivables to customers in the SME segment is the real estate sector, accounting for 60.78% (2017: 45.95%), followed by the retail and repair sector with a share of 8.04% (2017: 7.23%). As at 31 December 2018, the largest commercial sector within loans and receivables to customers in the Corporate segment is again the real estate sector, accounting for 44.75% (2017: 20.51%).

¹The definition of the sector is largely aligned with the ÖNACE codes and cannot be compared directly with customer segments, where a different classification logic is applied.

The following charts show the distribution of the real estate portfolio by segments, and the proportion of non-performing loans within the real estate portfolio. The major part of the real estate portfolio is found in the SME segment, with 79.9 % (2017: 85.0 %); at 0.8% (2017: 1.3 %), the NPL ratio in the real estate portfolio is below the NPL ratio of internal risk control of 1.97 % (2017: 2.52 %), as at 31 December 2018.

Top 25 loans and receivables customers

The following chart shows the VBW's top 25 loans to and receivables from customers as at 31 December 2018 with total coverage per single customer as well as total coverage accumulated in the amount of euro 677,955 thousand. It represents VBW's business model focussing on low-volume private and SME custoners. The top 25 loans to and receivables from customers represent around 10.5 % of the VBW's total amount of loans to and receivables from customers (top number 1 customer 1.2 % of the total amount of loans to and receivables from customers). The amounts are shown according to the internal risk point of view meaning receivables from customers as well as credit risks and contingent liabilities to customers excluding transactions within the Association and the pro rata guarantee of the Association which is not allocated to VBW.

Development by ratings

The division of the individual risk categories is effected according to the internal rating levels applicable within the Association. Receivables of risk category 1 have the highest credit rating (lowest expected default rate), while receivables of risk category 4 have the lowest credit rating, and receivables of risk category 5 constitute defaulted receivables (NPLs).

The NR category primarily comprises exposures below the threshold for mandatory rating.

Effects from contract amendments

The following table shows the carrying amounts and effects from contract amendments of financial instruments. Within the Association of Volksbanks, this concerns loans and receivables to customers exclusively.

Euro thousand	31 Dec 2018
Gross carrying amount before modification	51,081
Net modification gain/loss	-109
Gross carrying amount at 31 Dec. of loans and receivables for which loss allowance has changed to	
12-months measurement during period	3,481

Development of NPL portfolio

Receivables are considered defaulted if there is a default of payment of more than 90 days, pursuant to the CRR, and/or if it is unlikely that the borrower is going to meet its loan obligations in full without recourse to certain measures, such as the liquidation of any collateral (if available). The defaulted loans or NPLs are allocated to risk category 5 within the Association of Volksbanks. Internal control is effected according to the NPL ratio for balance sheet and off-balance sheet loans and receivables to customers. While defaults are monitored for the remaining types of receivables as well, in the past they have been of minor importance for the purpose of control.

As at 31 December 2018, the NPL ratio within internal risk control amounted to 1.97 % for VBW (2017: 2.52 %).

The NPL coverage ratio through risk provisions or Coverage Ratio I for internal reporting amounts to 29.81 % for VBW as at 31 December 2018 (2017: 26.95 %).

The NPL coverage ratio through risk provisions or Coverage Ratio III for internal reporting amounts to 104.73 % for VBW as at 31 December 2018 (2017: 103.7 %).

These ratios under the internal risk perspective exclusively refer to loans and receivables to customers as well as credit risks and contingent liabilities towards customers excluding internal transactions within the Association and the portion of the Association's guarantee that is not allocated to VBW. For this reason, these figures are different from the values presented in the following table. The credit risks and contingent liabilities in the table below also include transactions concluded with other Volksbanks. The items substantially increase the NPL denominator, thus reducing, for instance, the NPL ratio significantly (see explanatory notes below); accordingly, this perspective is less relevant for risk control. Moreover, the following table shows the full amounts of the transactions covered by the Association's guarantee. As, however, VBW as the CO of the Association of Volksbanks has passed on parts of the risk under any assumed loan portfolio to other Volksbanks, these parts will not be taken into account within the internal risk perspective for the purpose of steering VBW.

The credit risk volume relevant for calculating the NPL ratio amounted to euro 6,462,068 thousand in internal reporting (2017: euro 5,667,142 thousand). As mentioned already, this amount excludes the pro rata guarantee of the Association as well as the internal transactions of the Association and is accordingly much lower than the euro 8,861,757 thousand shown in the following table as at 31 December 2018 (2017: euro 9,527,322 thousand).

The NPL total in internal reporting amounted to euro 127,532 thousand as at 31 December 2018 (2017: euro 143,077 thousand). The NPL amount is lower than the euro 130,913 thousand shown in the following table as at 31 December 2018 (2017: euro 163,549 thousand). This is due to the pro rata allocation of defaulted guarantee transactions of the Association to the remaining Volksbanks. There are no internal transactions within the Association.

Total risk provisions within the NPL portfolio in internal reporting amounted to euro 38,011 thousand as at 31 December 2018 (2017: euro 38,555 thousand). The NPL amount is lower than the euro 42,329 thousand shown in the following table as at 31 December 2018 (2017: euro 49,482 thousand). This is due to the pro rata allocation of defaulted guarantee transactions of the Association to the remaining Volksbanks.

The amount of collaterals in the NPL portfolio in internal reporting amounted to euro 95,548 thousand as at 31 December 2018 (2017: euro 109,820 thousand). This amount is lower than the euro 96,248 thousand shown in the following table (2017: euro 117,346 thousand). This is due to the pro rata allocation of defaulted guarantee transactions of the Association to the remaining Volksbanks.

The following table shows the development of NPL holdings in the business year. The NPL portfolio as at 1 January 2018 takes account of the effect of transition from IAS 39 to IFRS 9 in the amount of euro -8,554 thousand compared to the portfolio as at 31 December 2017.

Development NPL portfolio

Euro thousand	Total
NPL as at 1 Jan 2017	203,454
Classified as impaired during the year	43,159
Transferred to not-impaired during the year	-19,330
Account coverage and write off - NPL	-62,850
Net repayments and other movements	-884
NPL as at 31 Dec 2017	163,549
Transition effect IFRS 9	-8,554
NPL as at 1 Jan 2018	154,995
Classified as impaired during the year	29,769
Transferred to not-impaired during the year	-11,035
Account coverage and write off - NPL	-42,395
Net repayments and other movements	-421
NPL as at 31 Dec 2018	130,913

The other portfolio changes in the 2017 business year include the increase of the carrying amount of NPL holdings from the Sparda Bank merger in the amount of euro 11,214 thousand. The other portfolio changes in the 2018 business year include the increase of the carrying amount of NPL holdings from the Waldviertler Volksbank Horn merger in the amount of euro 2,615 thousand.

Development forbearance portfolio

Forbearance refers to contractual concessions made by the lender to the debtor in the context of financial difficulties or imminent financial difficulties of the debtor, which the lender would not grant otherwise. Debtors whose transactions are classified as forborne are subject to special monitoring regulations within the Association of Volksbanks.

In relation to customer loans prior to allocation of the Association's guarantee, concessions were made for economic reasons for a total carrying amount of euro 78,631 thousand (2017: euro 95,902 thousand). This amount relates to performing forborne credit exposures in the amount of euro 39,076 thousand (2017: euro 41,299 thousand) and non-performing forborne credit exposures in the amount of euro 39,554 thousand (2017: euro 54,603 thousand).

Development of overdue positions

The following tables show the overdue positions within the credit risk-related portfolio:

All receivables that have been overdue for at least 90 days are allocated to the NPL portfolio. The following tables provide information about (among others)

- receivables that are individually impaired, but not overdue,
- the positions that have been overdue for at least 90 days and are not individually impaired, and
- positions that are neither individually impaired nor overdue.

In the case of receivables that are overdue but not individually impaired, the present value of the expected cash flows corresponds to that of the contractual cash flows.

As the major part of overdue positions is included in the customer portfolio, the analysis for this sub-portfolio of the credit risk-related portfolio was restricted.

Development of the portfolio of collaterals:

The following diagram and table show the development of the portfolio of collaterals, with real estate collaterals accounting for the major part at VBW. The values reported represent the credited value of the collaterals (after measurement and cap based on the amount of the receivable secured).

In the 2018 business year, no significant changes to the principles – applicable across the Association – for the management of loan collaterals occurred.

Acquisition of real estate collaterals

As at 31 December 2018 VBW holds two real estate collaterals from mergers with its predecessors. One was sold in January 2019, the second one is in the process of being sold. No further acquisition of real estate collaterals is made.

Development of the netting positions

c) Market risk

Market risk is the risk of changing prices or rates of value-determinant market risk factors (e.g. interest rates, exchange rates, interest rate and foreign exchange volatilities). VBW distinguishes the following types of market risk:

- Interest rate risk in the banking book
- Credit spread risk
- Market risk in the trading book
- Foreign exchange risk (open FX positions)
- Other valuation risks (IFRS fair value change)

Interest rate risk in the banking book

Interest rate risks emerge primarily through term transformation, which arises from deviations of fixed interest rate periods between assets and liabilities. Term transformation is a source of income for the bank in the form of a structural contribution.

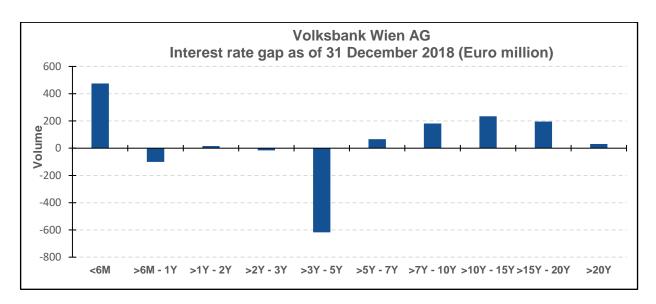

The interest rate risk in the banking book comprises all interest-bearing transactions reported and not reported in the balance sheet, except for transactions in the trading book. The interest rate risk position associated with the retail business of VBW mainly arises from variable index-linked lending business and variable-interest deposits (in the form of sight and savings deposits), as well as from implicit floors, in both the assets side and the liabilities side retail business. In lending business, this is associated with a shift from index-linked positions towards fixed-interest positions, as increasingly fixed-interest loans are granted within new business. By controlling the growth of fixed-interest volumes, the gradual development of a rolling fixed-interest position is ensured. Other decisive factors are bond positions of the bank's own portfolio, own issues and the interest-rate swaps used to control the interest rate position. At the end of 2018, VBW reports a relatively low positive term transformation. As at 31 December 2018, the present-value interest rate risk (regulatory interest rate risk statistics according to the OeNB standard procedure, interest rate risk coefficient) amounted to 5.2 % of own funds, which is clearly below the regulatory limit of 20 %. The interest rate sensitivity in the form of the present value of a basis point (PVBP) was around euro -0.7 million.

The Asset Liability Committee (ALCO) is responsible for controlling the interest rate position of VBW within the scope of risk limits defined by Risk Controlling and approved by the Managing Board via the risk strategy. The ALCO is the central

body for the management of interest rate risks. It is convened monthly at the CO or ad hoc as required. The Asset Liability Management (ALM) function, which belongs to the Treasury function in organisational terms, is responsible for the management of the ALCO. Proposed measures to control the interest rate position are worked out by the ALM function in cooperation with Risk Controlling and the local ALCOs of the affiliated banks. The aim is to create a structural contribution by way of positive term transformation. Effects on both income and present value are considered in managing the interest rate position. Interest rate risk reporting within the ALCO is taken care of by the Market and Liquidity Risk department.

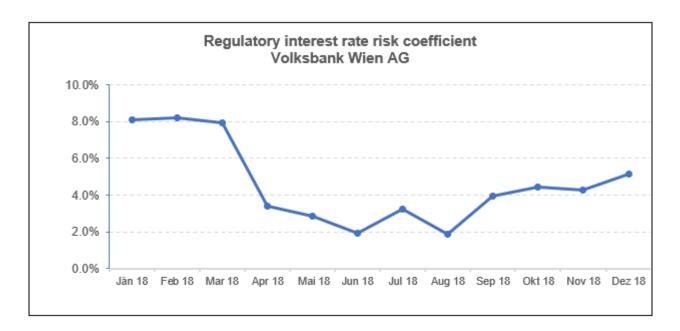

Present-value risk measurement and limitation are mainly effected on the basis of interest rate gaps (net position of the contractual or modelled fixed interest rates per maturity band), an interest rate book VaR based on historical simulations, the interest rate sensitivity in the form of a PVBP, and regulatory interest rate statistics. Period-based risk measurement is implemented in the form of a net interest income simulation. In the process, the effects on net interest income of the next 12 months are calculated for five potentially unfavourable scenarios. For 2019, net interest income decreases by euro 78 million in the least favourable scenario (a marked interest rate reduction (parallel 200 BP)). The results of the net interest income simulation and the interest rate book VaR are taken into account in the ICAAP within the scope of the risk-bearing capacity statement.

In both perspectives (present value and periodic), positions without fixed interest rates (e.g. in the form of sight and savings deposits, current account facilities) are included consistently in the risk measurement process by assuming replication and/or rolling. The assumptions are determined on the basis of statistical analyses, supplemented by expert opinions. Modelling aims to describe the development of customer interest rates depending on market interest rates. This is done on the basis of historically observed correlations (minimising the volatility of the margin compared to a combination of reference interest rates). Due to the high proportion of positions without fixed interest rates within the balance sheet, replication modelling has a significant impact on the measurement of interest rate risk. Since the key date of April 2018, revised replication assumptions have been applied, which have led to a prolongation of fixed interest rates of liabilities on average. This has caused a reduction of term transformation.

Interest rate gap of Volksbank Wien AG as at 31 December 2018

A distinguishing feature is the large short-term asset gap (net) which mainly arises through the index-linked loan portfolio. In the long-term range of more than 10 years, asset gaps mainly arise due to fixed-interest loans, which are compensated for the major part through liability replication assumptions in the maturity bands of under 10 years. The large gap in the 3- to 5-year maturity band mainly results from one issue.

OeNB interest rate risk coefficient of Volksbank Wien AG in 2018

The marked reduction in April 2018 is due to the modified modelling of replication assumptions. Ever since, the interest rate risk coefficient has shown a slight tendency to increase, which is mainly due to the continuous granting of fixed-interest loans in accordance with the interest rate control policy applicable across the Association.

Concentration risk

No concentration risks exist within interest rate risk.

Credit spread risk

The credit spread is defined as additional premium on the risk-free interest rate. Credit spread risk arises from fluctuations of the present values of assets due to credit spreads changing over the course of time.

The transactions relevant to credit spread risk are investments in the securities portfolio in the banking book, and not loans and receivables to customers. This essentially comprises bonds, funds as well as bonded loans. The securities portfolio in the banking book of the Association of Volksbanks is primarily held as a liquidity buffer, centrally at VBW. CDS positions would also have to be included, but currently do not exist either at VBW or within the Association. Within the scope of the ICAAP, credit spread risk is considered during calculation of the risk-bearing capacity and the bank-wide internal stress test. Reporting takes place monthly within the ALCO and is part of the overall bank risk report.

Risk measurement is mainly effected via credit spread VaR and sensitivity to any increase in credit spreads by 100 bps. The calculation of the credit spread VaR is based on a historical simulation for a 99.9% confidence level and a holding period of one year. In the process, the portfolio is divided into 30 risk clusters, depending on credit rating, branch of industry, type of product and seniority. The plausibility and reliability of the VaR indicators are reviewed by way of reverse comparisons (backtesting) and validated in a group independent from the modelling department on a recurring basis.

The risk ratios for the VBW are as follows

31 Dec 2018	Credit spread	100 basis
Euro thousand	value at risk	points-shift
Section 30a of the Austrian Banking Act - Association of Volksbanks	175,005	-147,098
31 Dec 2017	Credit spread	100 basis
Euro thousand	value at risk	points-shift
Section 30a of the Austrian Banking Act - Association of Volksbanks	110.485	-131.013

In line with the investment strategy, the securities portfolio in the banking book includes highly liquid assets of the public sector and covered bonds with a high credit rating. It is primarily held as a liquidity buffer and eligible for the regulatory liquidity coverage ratio (LCR) for the major part.

Concentration risk

Concentration risks can only arise on the level of issuers or risk clusters in the sense of similar issuers. Within credit spread risk, risk clusters are monitored. As at 31 December 2018, within the securities portfolio, the biggest concentrations exist in the Republic of Austria risk cluster with 34% and in covered bonds with 30%. Concentrations with individual issuers are limited by the issuer lines within credit risk.

Portfolio structure by credit rating:

Market risk in the trading book

The market risk in the trading book of VBW is of subordinate importance. The trading book is kept centrally at the CO. The affiliated banks do not keep any trading book. The main responsibilities of the Risk Controlling function include determination of the limit structure based on the allocated economic capital and the daily review of the limits, the administration of the front-office systems, and the development of the systems and models. The limit structure reflects the risk and Treasury strategy. The regulatory capital adequacy requirements of the trading book are calculated by means of the standard approach – VBW does not use any internal model for market risk in the trading book.

Within the scope of the ICAAP, market risk is considered within calculation of the risk-bearing capacity and the bank-wide internal stress test. Reporting is effected daily to the Treasury and Risk Controlling functions and monthly within the ALCO. Additionally, it is incorporated in the overall bank risk report.

A VaR is calculated every day for the trading book according to the method of historical simulation for the purpose of risk monitoring. In the historical simulation, historical market price changes are used to measure the current portfolio. The plausibility and reliability of the VaR indicators are reviewed daily by way of reverse comparisons (backtesting) and validated in a group independent from the modelling department on a recurring basis.

The following table shows the VaR in the trading book (for 99 % confidentiality niveau, holding period 1 day) divided by risk types

Euro thousand	Interest	Currency	Volatility	Credit Spread	Total
31 Dec 2018					
Trading book	65	0	15	12	95
31 Dec 2017					
Trading book	19	0	39	35	76

The following table shows interest, interest volatility and credit spread sensitivity in the trading book

Euro thousand	Interest +1 basis point	Interest volatility +1 %	Credit spread +1 basis point
31 Dec 2018			·
Trading book	14	-17	-3
31 Dec 2017			
Trading book	4	-23	-1

Apart from the VaR, a series of other risk indicators are calculated daily and used for limitation. They essentially comprise interest rate sensitivities and option risk indicators (gamma, vega). Additionally, there are management action triggers and stop-loss limits.

Since extreme situations are not covered by the VaR, comprehensive stress tests are carried out monthly or on an ad hoc basis across all portfolios in the trading book.

Foreign exchange risk (open FX positions)

The foreign exchange risk from open FX positions is of subordinate importance at VBW. It arises due to changes of the value of outstanding receivables and liabilities in foreign currencies through exchange rate fluctuations.

The following table shows FX VaR (99.9 % confidentiality niveau, holding period 1 year)

Value at Risk
112
Value at Risk
361

The following table shows the FX sensitivity per currency (open FX positions)

_

GBP	-2	12
Others	38	574
Total	192	4,594

Other valuation risks (IFRS fair value change)

Receivables that do not meet the SPPI criteria must be designated as fair value through profit or loss and must be measured. Due to fair value fluctuations of these receivables, this causes an effect on the income statement. During valuation of these receivables, the cash flows are discounted using the risk-free swap curve plus markup. The markups used for discounting are the standard risk costs and the liquidity costs. The remaining components are summarised in one factor (epsilon factor) upon conclusion of the deal, and frozen for subsequent measurement. This measurement risk is considered during calculation of the risk-bearing capacity and the bank-wide internal stress test. Reporting takes place monthly within the ALCO.

The portfolio concerned is a maturing portfolio, as any SPPI-non-compliant new business is only concluded in exceptional cases.

The following table shows the sensitivities of loans and receivables measured at fair value through profit or loss

31 Dec 2018	Market liquidity costs	Interest rate sensitivity
Euro thousand	+10 basis points	+10 basis points
Fair value through profit or loss - loans and receivables	-853	-68

d) Liquidity risk

As the CO of the Association of Volksbanks, VBW is responsible for liquidity management across the entire Association and acts as lender of last resort for the affiliated banks. The affiliated banks cover their refinancing requirements and invest their excess liquidity via VBW.

The most important source of refinancing of VBW consists of customer deposits, which have proven to be a stable source of funding in the past. Obviously, this is responsible for the major part of liquidity risk. The capital market offers additional opportunities for refinancing through securities issues, mainly covered bonds.

Both operational, short-term liquidity management and medium- to long-term liquidity management are performed in a centralised manner at VBW for the Association, in the Treasury division, through the Liquidity Management department. The monitoring and limitation of liquidity risk across the Association, as well as the methodological requirements regarding risk measurement are performed or stipulated by the Market and Liquidity Risk Controlling department at VBW.

The ALCO is responsible for controlling the liquidity position of VBW within the scope of risk limits defined by Risk Controlling and approved by the Managing Board within ALCO. The ALCO is the central body for the management of liquidity risks. Liquidity risk reporting within ALCO is taken care of by the Market and Liquidity Risk Controlling department.

Within liquidity risk, VBW distinguishes between illiquidity risk and funding risk. Illiquidity risk is the risk to be unable to settle payment obligations when they are due. In case of illiquidity risk, additional subcategories, e.g. refinancing risk

(roll-over risk), call risk and market liquidity risk are distinguished, which are of relevance especially in the context of liquidity stress testing. For VBW as a retail bank, illiquidity risk typically consists in the risk of a bank run. This occurs when, due to a loss of confidence, customers withdraw large deposit volumes and at the same time alternative funding sources are not accessible (any more).

Illiquidity risk is managed by holding a sufficient liquidity buffer. VBW is responsible for the central management of the liquidity buffer for the whole of the Association. The liquidity buffer mainly consists of highly liquid bonds that are LCReligible for the major part, of deposits with the national bank, of ECB tender potential, and covered bond issue potential. The liquidity of the liquidity buffer is tested regularly. The Liquidity Management department within the Treasury division is responsible for the current management of the liquidity buffer within the Association.

At VBW, funding risk is defined as a negative income statement effect that occurs due to potential future increases of refinancing costs on the money and capital markets as well as in the retail sphere. This risk is taken into account in the risk-bearing capacity calculation within the scope of the ICAAP. Said risk is of minor importance at VBW, as the company is hardly dependent on the capital market, and little price sensitivity is observed in the sphere of customer deposits.

The risk measurement and limitation of illiquidity risk is effected through the regulatory indicators LCR and NSFR, the survival period from internal liquidity stress testing, and through additional operational indicators.

The LCR aims to ensure the short-term financial solvency of banks under stressed conditions over a short-term horizon of 30 calendar days. The calculation of the LCR takes place weekly and at the end of the month in the Market and Liquidity Risk Controlling department.

The NSFR limits the liquidity term transformation by determining a minimum of stable refinancing, depending on the liquidity characteristics of the assets and other (off-balance sheet) operations of a bank. Currently, calculation takes place weekly and on the last day of each quarter in the Market and Liquidity Risk Controlling department for VBW.

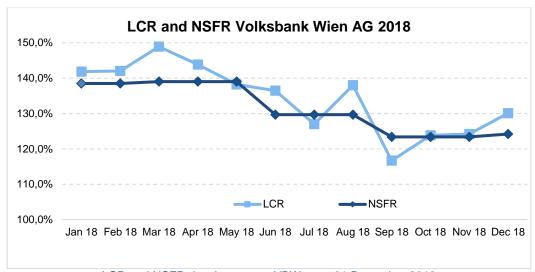

The survival period is the period during which, under a given stress scenario, the liquidity buffer held is sufficient to cover cumulated net liquidity outflows. Currently, five stress scenarios of varying degrees of severity are calculated. The scenario assumptions include a crisis of the Volksbank-Sector, a national banking crisis and pan-European stressed market conditions. The least favourable of the scenarios calculated is applied to the survival period. The survival period is calculated lated at the level of the Association, not the individual bank.

The funding risk is measured by way of a scenario analysis that takes into account the effect on funding costs, considering general planning uncertainties and adverse idiosyncratic conditions. These calculations provide input to the ICAAP as well as stress testing activities across the Association.

Regulatory liquidity ratios LCR, NSFR and survival period in 2018:

In 2018, both regulatory ratios were always clearly above the regulatory limits. Over the past 12 months, the LCR has always been above the internal target of 115% on the last day of each month. The LCR depends on payment transactions and calendar effects causing material monthly changes. The LCR decreases during the month due to effects of payment transactions, therefore it is sometimes clearly above the limit at the end of the month.

The NSFR is calculated quarterly and has always been above target over the past months

LCR and NSFR development at VBW as at 31 December 2018

The LCR shows typical jumps mainly due to payment transactions and/or calendar effects. The growth of the loan portfolio in 2018 has caused a slight decrease in liquidity ratios. In 2018, the survival period of the Association of Volksbanks always exceeded 150 days at the last day of the month, and thus clearly above internal limits.

Concentration risk

Due to diversified funding through customer deposits, concentration risk is not material. The only risk clusters exist at customer level. Accordingly, the largest deposits at customer level are monitored both in risk controlling and also within operational liquidity management. Generally, they amount to less than 1% of total assets. There are only a few temporary exceptions with a few major accounts for implementing payment transactions or balancing liquidity peaks. These deposits are regularly monitored and reported on within the scope of liquidity risk management.

Operational liquidity management

The Liquidity Management department in the Treasury division is responsible for operational liquidity management. The department is the central unit at VBW and within the Association of Volksbanks for matters regarding the pricing of liquidity (transfer pricing), the central management of collaterals across the Association, the determination of the funding structure, the disposition of available liquid funds, and compliance with the refinancing strategy; it takes care of the following essential duties:

- Cash management (settlement of all transactions of the Association as well as disposition of the banking connections maintained by VBW)
- Collateral management: ECB-eligible collaterals of the Association (bonds and credit claims) and underlying stock management for covered bonds
- Issue planning
- Daily liquidity forecast for the following 31 days, and weekly for the following 12 months
- Monitoring of refinancing positions of the Association of Volksbanks, and the control system put into effect by VBW as CO with the approval under section 30a Austrian Banking Act, for the affiliated banks among others liquidity reports, refinancing management, utilisation of collaterals, early warning system
- Compliance with minimum reserve regulations for the Association of Volksbanks
- Reporting to the CO Managing Board and to the ALCO

e) Operational risk

VBW defines operational risk as the risk of losses due to the inadequacy or failure of internal procedures (processes), people, systems or to external events, and the associated legal risks. The reputational, conduct, model, IT and security risks are closely associated with operational risk and are actively taken into account. The calculation of regulatory capital adequacy requirements is effected using the standard approach. As of 1 January 2018, an internal method based on loss data and scenarios is used for the economic perspective.

Organisation

At VBW, line management is responsible for the management of operational risks (OpRisk Management). It is supported in this function by centrally and decentrally based experts from the spheres of operational risk and internal control system. The aim is to optimise processes in order to reduce the probability of the occurrence of operational risks and/or to reduce the effect of operational losses. Moreover, close cooperation with security, safety and insurance management allows for optimal, comprehensive control of operational risks.

Methods for the management of operational risks

Within the scope of operational risk management, both quantitative and qualitative methods are used. Quantitative elements comprise - for instance - the execution of risk analyses, the performance of stress tests at the level of the Association, the determination and monitoring of risk appetite and of the risk indicators, as well as the preparation of the incident database. Qualitative control measures are reflected in the implementation of training events, awareness-building measures, risk analyses, the preparation of the incident database incl. analysis of causes, the implementation of uniform ICS checks, as well as in the analysis of the risk reports.

If the key indicators defined for operational risk are exceeded, the defined escalation process is applied. This process provides for a detailed analysis of causes and subsequently initiation of adequate measures.

Operational risk management and risk controlling function

The following principles, derived from the risk strategy of the Association of Volksbanks, apply in OpRisk Management at VBW:

- The primary aim of the entire OpRisk Management system is to optimise processes to decrease the likelihood of incidents occurring and/or the impact of operational losses.
- Incidents are documented fully and in a sufficiently transparent manner via an electronic platform to enable thirdparty experts to benefit from the documentation. Operational incidents are recorded in a uniform manner across the Association. The resulting transparency with respect to the occurrence of incidents allows for risk assessment to be derived from historical facts.
- The methods, systems and processes in OpRisk Management are defined by the CO and must be complied with by the respective banks.
- The appropriateness of the risk control and monitoring measures and other risk-minimising measures is assessed on an on-going basis, but at least once a year, and reported to the Managing Board. Measures for risk control comprise, for instance, awareness-building measures/training events, the monitoring of the OpRisk indicators, maintaining the confidentiality, availability and integrity of customer and corporate data, as well as business continuity planning, but also - in particular - the adequate separation of responsibilities, as well as observance of the dual-control principle. Operational (residual) risks that cannot be avoided, reduced or transferred must be accepted formally and demonstrably by the management.
- The efficiency of OpRisk Management is confirmed through periodic and independent internal audits.

Internal control system

Within VBW, an internal control system (ICS) has been put in place according to the principles of the internationally recognised standards of the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Detailed descriptions of ICS processes and control measures are available. The responsibilities and roles relating to the ICS are clearly defined. Regular reporting takes place for the ICS. Control activities are documented and reviewed, ICS-relevant risks are regularly evaluated and adjusted. Accordingly, a continuous optimisation process is ensured. Internal Audit, in its capacity as independent supervisory body, audits the ICS. Both the effectiveness and adequacy of the ICS, as well as compliance with instructions are audited. The OpRisk and ICS framework describes the inter-related components implemented within the Association of Volksbanks with a view to identifying, measuring, monitoring and controlling operational risk. The close interlocking of OpRisk Management with the internal control system ensures appropriate consideration of operational risks within the Association of Volksbanks.

In 2018, one focus was on revising the training concept and process-related adaptation of the ICS based on the qualitative risk analysis at VBW within the scope of its function as CO, which is then also carried out in the other banks

f) Other risks

In terms of other risks, VBW is confronted with strategic, reputational, equity, direct real estate, as well as business risks.

Strategic risk is the risk of negative effects on capital and earnings due to business policy decisions or insufficient adjustment to changes of the economic environment.

Reputational risk is the risk of negative effects on the result of the bank due to a loss of reputation and an associated negative effect on the stakeholders (regulatory authority, owners, creditors, employees, customers).

VBW defines equity risk as the risk of an instable composition of internal equity in relation to the bank's type and size, or difficulties in quickly raising additional internal capital if needed.

The direct real estate risk describes the risk of negative value changes in the real estate portfolio (real estate in the company's own balance sheet or in the balance sheet of any subsidiary).

Business risk (yield risk) is the risk arising from the volatility of earnings and the associated risk of no longer being able to (fully) cover sticky fixed costs.

Non-standard risks and/or non-financial risks (reputational risks, conduct risks, compliance risks, legal risks, model risks, as well as IT and system risks) are taken into account, among others, in the compliance framework and the framework for operational risks.

Organisational and process-based measures, in particular, have been implemented to manage other risks

REPORT ON THE CONSOLIDATED FINANCIAL STATEMENTS

Audit Opinion

We have audited the consolidated Financial Statements of

VOLKSBANK WIEN AG, Vienna, Austria,

and its subsidiaries ("the Group"), which comprise the consolidated Statement of Financial Position as of 31 December 2018, and the consolidated Statement of Comprehensive Income, consolidated Statement of Changes in Equity and consolidated Statement of Cash Flows for the year then ended, and the Notes to the consolidated Financial Statements.

In our opinion, the consolidated Financial Statements present fairly, in all material respects, the consolidated Financial Position of the Group as of 31 December 2018, and its consolidated Financial Performance and consolidated Cash Flows for the year then ended in accordance with International Financial Reporting Standards (IFRSs) as adopted by the EU, the additional requirements pursuant to Section 245a UGB (Austrian Commercial Code) and the Section 59a BWG (Austrian Banking Act).

Basis for our Opinion

We conducted our audit in accordance with the EU Regulation 537/2014 ("AP Regulation") and Austrian Standards on Auditing. These standards require the audit to be conducted in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the "Auditor's Responsibilities" section of our report. We are independent of the audited Group in accordance with Austrian company law and professional regulations, and we have fulfilled our other responsibilities under those relevant ethical requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated Financial Statements. These matters were addressed in the context of our audit of the consolidated Financial Statements as a whole, however, we do not provide a separate opinion thereon.

Valuation of loans to and receivables from customers at amortised cost

Risk for the consolidated Financial Statements

Loans to and receivables from customers at amortised cost represent a significant item in the consolidated Statement of Financial Position. As of 31 December 2018, the carrying amount of loans to and receivables from customers at amortised cost amounts to EUR 5,216.7 million, accounting for 45 % of total assets of EUR 11,505.5 million. The loan loss provisions for these loans to and receivables from customers at amortised cost amount to EUR 50.5 million.

The Managing Board of VOLKSBANK WIEN AG describes the approach to determine loan loss provisions which has changed compared to prior year in accordance with IFRS 9, in Note 3o), 3q) and 52b) of the Notes to the consolidated Financial Statements.

For loans to and receivables from customers at amortised cost that have objective evidence of impairment (stage 3) and are individually significant, a specific loss loan provision based on szenario-weighted, expected cash flows is recognized. These take into account assessment of the financial position of the customer and valuation of collaterals. Generally, loan loss provisions at an amount equal to 12-month expected credit losses (stage 1) are recognized for all other loans to and receivables from customers at amortised cost. In case the credit risk has increased significantly (stage 2) and for loans to and receivables from customers at amortised cost not individually significant, for which there is objective evidence of impairment (stage 3), ECL is calculated based on lifetime expected credit loss. Determination of ECL requires extensive estimation and assumptions. These mainly comprise rating based default probabilities and loss given default, which take information about current conditions and forecasts of future economic conditions into account.

This results in the risk for the consolidated Financial Statements that the transfer between stages and the calculation of loan loss provisions are subject to significant estimations and assumptions, resulting in room for discretion as well as estimation uncertainty in respect of the amount of the loan loss provisions.

Our response

We analysed the process documentation and internal guidelines regarding the allocation, monitoring and recognition of loan loss provisions and evaluated whether they are suitable to identify events of default and to adequately determine the recoverability of these loans to and receivables from customers. We compiled the relevant key controls, assessed their design and implementation, and tested their effectiveness on a sample basis.

On a sample basis, we evaluated whether evidence of credit default exists. Sampling was performed risk-oriented, by particularly taking into account rating levels with higher default risk and based on random samples as well as statistical sampling methods. In case of identified events of default, we assessed the Group's estimates regarding the amount and timing of future cash flows and whether the assumptions were appropriate.

For all other loans to and receivables from customers at amortised cost for which the loan loss provisions are calculated based on the ECL, we analysed the Group's documentation of the applied method for consistency with the requirements of IFRS 9. Additionally, we evaluated the criteria for stage-transfer and, based on the Group's internal validation, the models and parameters used therein as to whether they are suitable to determine loan loss provisions in adequate amounts. We assessed the appropriateness of the statistical models used and the mathematical functionalities to determine the probabilities of default and loss rates based on 12 months and lifetime. Furthermore, we analysed the selection and measurement of future estimates and szenarios by comparison with external forecasts and assessed their consideration in the allocation to the stages and in estimating the parameters. We assessed the accuracy of the loan loss provisions on a sample basis. For these procedures, we consulted our financial mathematicians as specialists.

Additionally, for the underlying IT-systems, we evaluated the effectiveness of selected automated controls.

Finally, we evaluated the adequacy of the disclosures on the determination of loan loss provisions for loans to and receivables from customers at amortised cost in the Notes to the consolidated Financial Statements.

Recognition of deferred tax assets on tax loss carryforwards

Risk for the consolidated Financial Statements

Based on future expected taxable income, the Group recognized deferred tax assets on tax loss carryforwards amounting to EUR 38.0 million as of 31 December 2018.

The Managing Board of VOLKSBANK WIEN AG describes the approach to recognize deferred tax assets on tax loss carryforwards in Note 3w) and 23) of the Notes to the consolidated Financial Statements.

Recognition of deferred tax assets on tax loss carryforwards highly depends on estimates made by the Managing Board in respect of the future availability of sufficient taxable profit and the reversal of deferred tax liabilities. The assessment of the realisation of tax loss carryforwards, mainly in VOLKSBANK WIEN AG, is based on forecasts and is subject to uncertainties and therefore represents a risk to the consolidated Financial Statements.

Our response

We evaluated the assumptions underlying the forecast of future taxable profit on which deferred tax assets are expected to be realised, for traceability and plausibility.

For this purpose, we compared the key input parameters for the forecast of future taxable profit with internal budgeting and with an externally prepared valuation report of VOLKSBANK WIEN AG as of 31 December 2018. Moreover, we assessed the appropriateness of the assumptions made, using externally available data, such as macroeconomic forecasts, and the Group's past results is respect of their planning accuracy. For these procedures, we consulted our valuation specialists.

Finally, we evaluated the adequacy of the disclosures on the deferred tax assets, particular with respect to unused tax loss carryforwards, in the Notes to the consolidated Financial Statements.

Presentation of the business combination VB Horn

Risk for the consolidated Financial Statements

The transfer of Waldviertler Volksbank registrierte Genossenschaft mit beschränkter Haftung ("VB Horn") into the parent company VOLKSBANK WIEN AG was registered in the companies' register on 20 June 2018.

The Managing Board of VOLKSBANK WIEN AG describes the approach of recognition of the business combination VB Horn in Note 2) of the Notes to the consolidated Financial Statements.

For the purpose of initial consolidation, in a first step, the transferred assets and assumed liabilities were identified. In a second step, the identified assets and liabilities of VB Horn were measured, taking into account planning and other assumptions and recognized at their fair values in the consolidated Financial Statements as of 31 December 2018. Both steps were based on estimates and judgement made by the Managing Board of VOLKSBANK WIEN AG, both of which are subject to significant uncertainties and therefore, represent a risk to the consolidated Financial Statements.

Our response

In the course of our audit we assessed the existence of control as of 20 June 2018 by assessing whether the terms of the acquisition agreement in respect of the closing were complied with and whether the identified acquired assets and assumed contingent liabilities and liabilities qualify for recognition.

Additionally, we evaluated the determination of the fair values of the identified customer relations and the new shares in VOLKSBANK WIEN AG granted as compensation for the 100 % of the shares based on external valuation reports of the identified customer relations and company values of VOLKSBANK WIEN AG and VB Horn.

We assessed the assumptions used for the recognition and calculation of the fair values of the identified customer relations and compensation including the underlying planned results for VB Horn for traceability and plausibility.

We further evaluated whether the method of valuation and its implementation in the valuation models as well as the significant valuation parameters such as cash flows, useful lives, cost of capital are appropriate. For these procedures, we consulted our valuation specialists.

Finally, we evaluated the adequacy of the disclosures on the business combination VB Horn in the Notes to the consolidated Financial Statements.

Responsibilities of Management and the Audit Committee for the consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated Financial Statements in accordance with International Financial Reporting Standards (IFRSs) as adopted by the EU, the additional requirements pursuant to Section 245a UGB (Austrian Commercial Code) as well as Section 59a BWG and for such internal control as management determines is necessary to enable the preparation of consolidated Financial Statements that are free from material misstatement, whether due to fraud or error.

Management is also responsible for assessing the Group's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting, unless management either intents to liquidate the Group or to cease operations, or has no realistic alternative but to do so.

The audit committee is responsible for overseeing the Group's financial reporting process.

Auditor's Responsibilities

Our objectives are to obtain reasonable assurance about whether the consolidated Financial Statements as a whole are free from material misstatement – whether due to fraud or error – and to issue an auditor's report that includes our audit opinion. Reasonable assurance represents a high level of assurance, but provides no quarantee that an audit conducted in accordance with the AP Regulation and Austrian Standards on Auditing (and therefore ISAs), will always detect a material

misstatement, if any. Misstatements may result from fraud or error and are considered material if, individually or in aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated Financial Statements.

As part of an audit in accordance with the AP Regulation and Austrian Standards on Auditing, we exercise professional judgment and maintain professional skepticism throughout the audit.

Moreover:

- We identify and assess the risks of material misstatement in the consolidated Financial Statements, whether due to fraud or error, we design and perform audit procedures responsive to those risks and obtain sufficient and appropriate audit evidence to serve as a basis for our audit opinion. The risk of not detecting material misstatements resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations or override of internal control.
- We obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal control.
- We evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- We conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the respective note in the consolidated Financial Statements. If such disclosures are not appropriate, we will modify our audit opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.
- We evaluate the overall presentation, structure and content of the consolidated Financial Statements, including the notes, and whether the consolidated Financial Statements represent the underlying transactions and events in a manner that achieves fair presentation.
- We obtain sufficient appropriate audit evidence regarding the financial information of the entities and business
 activities within the Group to express an opinion on the consolidated Financial Statements. We are responsible for
 the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.
- We communicate with the audit committee regarding, amongst other matters, the planned scope and timing of our audit as well as significant findings, including any significant deficiencies in internal control that we identify during our audit.
- We communicate to the audit committee that we have complied with the relevant professional requirements in respect of our independence, that we will report any relationships and other events that could reasonably affect our independence and, where appropriate, the related safeguards.
- From the matters communicated with the audit committee, we determine those matters that were of most significance in the audit i.e. key audit matters. We describe these key audit matters in our auditor's report unless laws or other legal regulations preclude public disclosure about the matter or when in very rare cases, we determine that a matter should not be included in our audit report because the negative consequences of doing so would reasonably be expected to outweigh the public benefits of such communication.

Report on Other Legal Requirements

Group Management Report

In accordance with Austrian company law, the Group management report is to be audited as to whether it is consistent with the consolidated Financial Statements and prepared in accordance with legal requirements.

Management is responsible for the preparation of the Group management report in accordance with Austrian company law and other legal or regulatory requirements.

We have conducted our audit in accordance with generally accepted standards on the audit of Group management reports as applied in Austria.

Opinion

In our opinion, the Group management report is consistent with the consolidated Financial Statements and has been prepared in accordance with legal requirements. The disclosures pursuant to Section 243a UGB (Austrian Commercial Code) are appropriate.

Statement

Based on our knowledge gained in the course of the audit of the consolidated Financial Statements and our understanding of the Group and its environment, we did not note any material misstatements in the Group management report.

Other Information

Management is responsible for other information. Other information is all information provided in the annual report, other than the consolidated Financial Statements, the Group management report and the auditor's report. We expect the annual report to be provided to us after the date of the auditor's report.

Our opinion on the consolidated Financial Statements does not cover other information and we do not provide any kind of assurance thereon.

In conjunction with our audit, it is our responsibility to read this other information as soon as it becomes available, to assess whether, based on knowledge gained during our audit, it contains any material inconsistencies with the consolidated Financial Statements or any apparent material misstatement of fact.

Additional Information in accordance with Article 10 AP Regulation

At the Annual General Meeting dated 18 May 2017, we were elected as group auditors. We were appointed by the Supervisory Board on 1 June 2017. We have been the Group's auditors from the year ended 31 December 2015 without interruption.

We declare that our opinion expressed in the "Report on the Consolidated Financial Statements" section of our report is consistent with our additional report to the Audit Committee, in accordance with Article 11 AP Regulation.

We declare that we have not provided any prohibited non-audit services (Article 5 Paragraph 1 AP Regulation) and that we have ensured our independence throughout the course of the audit, from the audited Group.

Engagement Partner

The engagement partner is Mr Walter Reiffenstuhl.

TERMINOLOGY

Association of Volksbanks

The Association of Volksbanks includes the primary banks as well as VBVM (Volksbank Vertriebs- und Marketing eG).

Banking association in accordance with section 30a of the Austrian Banking Act (BWG)

The banking association comprises the primary banks as associated banking institutions and VOLKSBANK WIEN AG as the central organisation.

Primary banks

8 regional Volksbanks, 1 specialist bank (Österreichische Ärzte- und Apothekerbank AG)

VOLKSBANK WIEN AG

is one of the regional Volksbanks and also the central organisation of the banking association.

Austrian Cooperative Association

Within the Association of Volksbanks, auditing and the representation of interests are effected by Österreichischer Genossenschaftsverband (Schulze-Delitzsch) [Austrian Cooperative Association] – ÖGV in brief. Moreover, since the beginning of 2019, pursuant to the BWG, the ÖGV has been responsible for the early warning of risks regarding its members, together with Einlagensicherung Austria.
